Information Canada
Ottawa, 1971

PREFACE

The 1970-71 edition of the *Canada Year Book* continues a long series of annual publications giving authoritative statistical and other information on many of the measurable phases of Canada's development. The Year Book has, through the years, summarized the statistical data made available by the Dominion Bureau of Statistics and presented it along with legislative and other pertinent information to give concisely, within the covers of one volume, the story of Canada's social and economic progress.

The publication date of the current Year Book was advanced several months so that it covers the eighteen-month period running from April 1969—the date of the 1969 edition—to December 1970. It has thus been possible to include data for two additional years in most chapters although, because of space limitations, in certain cases where figures for a later year reduce the significance of earlier data, the latest year tabulations only are included. It should also be noted that, because the Year Book production process extends over several months, by the time the volume is off the press later data on some subjects may be available from the DBS or the department concerned. Readers in need of the most recent information available or of figures that have been omitted this year should address themselves to the appropriate DBS Division or Government Department, as indicated in the footnotes or in the Directory of Sources of Official Information in Chapter XXVII.

In addition to the normal updating of all subject matter, feature articles or specially prepared chapter material has been included on: "Resource and Economic Development North of the 60th Parallel", pp. 58-64; "The Cabinet Committee System", pp. 79-84; "Trends in Population Growth in Canada with Special Reference to the Decline in Fertility", pp. 213-220; "Provincial Assistance to Artists and Cultural Organizations", pp. 453-456; "Federal Research Advances Canadian Mineral Development", pp. 723-730; "Origin and Destination of Canadian Manufacturers' Shipments", pp. 794-799; "Provincial Assistance to Manufacturing", pp. 804-812; and "Canada's Trade with the Pacific Rim Countries", pp. 1068-1078.

The volume was produced in the Year Book Division of the Dominion Bureau of Statistics by Miss Margaret Pink, Assistant Director and Editor of the Canada Year Book, and the Year Book Division staff under the direction of Pierre Joncas, Director of the Division. The charts and maps, except where otherwise indicated, were prepared by or under the direction of Laurent Tessier of the Drafting Unit. Credits for photographic illustrations used throughout the publication are listed on pp. v and vi.

The co-operation of numerous officials of the various Departments of the Federal and Provincial Governments and of this Bureau in the preparation of material for the Year Book is gratefully acknowledged. Credit by means of footnotes is given where possible either to the persons or to the public service concerned.

INTERPRETATIVE DATA

In Canada as a rule the Imperial system of weights and measures is followed; an exception is the ton where, unless otherwise stated, the short ton of 2,000 pounds is meant.

Relative Weights and Measures, Imperial and United States

The following list of coefficients may be used to translate amounts expressed in one unit to the other. Where reference is made to Imperial pint, quart and gallon, their equivalent in ounces is also in Imperial measure; likewise United States designations for these quantities are shown in the U.S. equivalent in ounces. The Imperial (or British) fluid ounce and the U.S. fluid ounce are different measures. One Imperial fluid ounce equals 0.96 U.S. fluid ounce and one Imperial gallon equals 1.2 U.S. gallons.

1 Imperial pint=20 fluid ounces	1 short ton=2,000 pounds
1 U.S. pint=16 fluid ounces	1 long ton=2,240 pounds
1 Imperial quart=40 fluid ounces	1 barrel crude petroleum=35 Imperial gallons
1 U.S. quart=32 fluid ounces	1 ounce avoirdupois=0.91146 ounce troy (oz.t.)
1 Imperial gallon=160 fluid ounces	1 statute mile=5,280 feet
1 U.S. gallon=128 fluid ounces	1 nautical mile=6,080 feet.
1 Imperial proof gallon=1.36 U.S. proof gallon	

Fiscal Years of Federal and Provincial Governments

The fiscal year of the Federal Government and of each of the ten Provincial Governments ends on March 31. Throughout the Year Book, all figures are for calendar years except where otherwise indicated in text or table headings.

Miscellaneous

Maritime Provinces=Prince Edward Island, Nova Scotia and New Brunswick

Atlantic Provinces=Newfoundland, Prince Edward Island, Nova Scotia and New Brunswick

Central Canada=Quebec and Ontario

Prairie Provinces=Manitoba, Saskatchewan and Alberta

Btu.=British thermal unit (coal)

Mcf.=thousand cubic feet (gas)

n.e.s.=not elsewhere specified.

Symbols

The interpretation of the symbols used in the tables throughout this publication is as follows:—

.. figures not available.

... figures not appropriate or not applicable.

— nil or zero.

-- amount too small to be expressed or where "a trace" is meant.

^p preliminary figures.

^r revised figures.

Prime Minister Trudeau contemplates the treacherous waters of the Northwest Territories' famous South Nahanni River, whose racing current carried him downstream in a river scow through miles of canyons in massive towering mountains to its junction with the Liard. This hazardous waterway and the magnificent surrounding country, seemingly cut off from the rest of the world, is steeped in legend and over it hangs an air of mystery that fascinates the adventurer.

The interpretation of the symbols used in the tables throughout the Year Book will be found on p. vii of this volume.

Section 1.—Physical Geography

The Canada Year Book as a whole may be said to be a presentation of the geography of the modern state of Canada—cultural, political and economic—as it has developed over the century since Confederation. Although, as in other advanced societies, rapid urbanization and technological and scientific progress have mitigated the dependence of growth on natural environment and the majority of Canadians are now living and working in a man-made urban environment, nevertheless the physical features of this vast country, its size, its northern position and its great resources have been basic to the distinctive organization and productive development that has placed it among the world's most advanced countries, despite its relatively small population. Distance, climate and primary resource occupations have played a major role in the destinies of its inhabitants.

Canada, occupying the northern half of the North American Continent with the exception of Alaska and Greenland, is the largest country in the Western Hemisphere and the second largest in the world. The lands within its 3,851,809 sq. miles of territory are extremely diverse, ranging from the almost semi-tropical areas of the Great Lakes peninsula and the southwest Pacific Coast, wide fertile prairies and great areas of mountains, rocks and lakes to seemingly endless stretches of northern wilderness and arctic tundra. The southernmost point of the country is Middle Island in Lake Erie, at 41° 41' N. In a straight line 2,875 miles northward, past the treeline and far into the Arctic, is Cape Columbia on Ellesmere Island, Canada's northernmost point, at 83° 07' N. From east to west at the widest point, the straight-line distance is 3,223 miles—from Cape Spear, Newfoundland, at 52° 37' W, to Mount St. Elias, Yukon Territory, at 141° W.

In position, Canada is situated at the crossroads of contact with the principal powers and some of the most populous areas of the world. In the south, it borders on the United States for a distance of 3,986.8 miles. In the north, the Arctic Archipelago penetrates far into the polar basin, making Canada neighbour to northern Europe and the Union of Soviet Socialist Republics. In the east, the salient of Labrador and the Island of Newfoundland commands the shortest crossings of the North Atlantic Ocean and links Canada geographically with Britain and France. In the west, the broad arc of land between Vancouver in southern British Columbia and Whitehorse in Yukon Territory provides departure points for crossings of the North Pacific Ocean between continental North America and the Far East. The length of the Yukon-British Columbia border adjoining Alaska is 1,539.8 miles.

In size, Canada's 3,851,809 sq. miles may be compared with the area of the Soviet Union at 8,649,539 sq. miles,* China (including Taiwan) at 3,705,408 sq. miles,* and Brazil at 3,286,488 sq. miles.* It is more than 40 times the size of Britain and 18 times the size of France. This immense area, which seems to afford extensive scope for settlement, imposes its own burdens and limitations. Much of the land is mountainous and rocky or is under an arctic climate. The developed portion is probably not more than one third of the total; the occupied farm land is less than 8 p.c. and the productive forest land 27 p.c. of the total. The population, estimated at 21,377,000 as at June 1, 1970, may be compared with 201,152,000† for the United States (1968) and with 88,209,000‡ for Brazil (1968).

Most of Canada's population lives in a corridor one to two hundred miles in width along the whole extent of the southern border. Northward, within the next two to three hundred miles, there are isolated centres established primarily for the extraction of minerals, timber or power and beyond are only the outposts of the northern territories. Thus, size and distance have permeated the lives and background of Canadians, forcing their efforts toward the solving of major problems of transportation and communication and of problems created by the existence of regions with different cultural characteristics and with different resources, culminating in divergent levels of economic progress.

The geographical knowledge of Canada is reasonably complete considering its size and its large areas of difficult access. The whole country has been surveyed and mapped at a scale of 1:250,000, which is very close to four miles to the inch, allowing a detailed depiction of relief, river systems, transportation facilities, forest cover and centres of population. Comparisons of different features and areas can be made, as all sheets of the series are drawn to the same specifications. In addition, all settled areas and regions of northern development have been mapped at larger scales, in particular at 1:50,000 or approximately one and a quarter inches to the mile, and vertical air photographs showing still more detailed depiction of the terrain are available for the whole country, varying in scale from about one inch to the mile in the Arctic to four inches, or larger, to the mile in settled areas. Details of Federal Government surveying and mapping services are given in Section 3.

Politically, Canada is divided into ten provinces and two territories.‡ Each province is sovereign in its own sphere and administers its own natural resources and upon such resources, as related to topography, position and climate, is based the economy of the province. The resources (except for game) of the Yukon and Northwest Territories, because of their remoteness, the great extent and the meagre and scattered populations of these areas, are administered by the Federal Government. The land and freshwater areas of the provinces and territories are given in Table 1.

The mileages in Table 2 are another indication of the size of Canada. They show the length of transportation facilities required between the larger cities, between outlying industrial communities built up around large mining or smelting projects and the nearest cities, and between northern outposts and the supplying cities.

* *United Nations Statistical Yearbook, 1968.*

† *United Nations Population and Vital Statistics Report, January 1970.*

‡ The economic development of the country as a whole has formed regions quite distinct from the political divisions; these are described in an article appearing in the 1962 Year Book at pp. 17-23.

1.—Approximate Land and Freshwater Areas, by Province or Territory

NOTE.—A classification of land area as agricultural, forested, etc., is given in Chapter X on Land Use and Renewable Resource Development and total area by tenure on p. 37.

Province or Territory	Land	Freshwater	Total	Percentage of Total Area
	sq. miles	sq. miles	sq. miles

2.—Travel Distances between Certain Cities and Other Points of Interest in Canada

NOTE.—The dash used in this table indicates that the distance concerned is of no particular interest. In each case the mileage given is for the type of travel most generally used—road (H), rail (R), air (A) or water (W); air mileages are given for most transcontinental distances but mileage by one type of travel may be given in one direction between two points and by another type of travel in the opposite direction. All distances are given in statute miles.

The Canadian Permanent Committee on Geographical Names, administered by the Department of Energy, Mines and Resources, deals with all questions of geographical nomenclature affecting Canada and undertakes research and investigation into the origin and usage of geographical names. The Committee is composed of representatives of the federal mapping agencies and other federal agencies concerned with nomenclature and a representative appointed by each province.

Subsection 1.—Inland Waters

Every year about 8,000,000,000,000 tons of water falls on Canada in the form of rain and snow. Much of it is evaporated but a large amount drains back to the oceans as surface run-off, forming rivers and lakes along its route. This surface water, ceaselessly moving, is the dominant feature of the Canadian environment. It has been estimated, in fact, that about 7.6 p.c. of Canada's total area is covered by fresh water (Table 1). There are probably more lakes here than in any other country in the world—so many that they have never been counted. The total area of fresh water is given as 291,571 sq. miles but this figure does not include most of the small ponds, non-permanent lakes and sloughs, seasonally flooded areas or large areas of marsh and wet tundra. As much as one seventh of all the fresh, liquid, surface water in the world is contained within Canada's boundaries.

A large portion of this water is contained in the Great Lakes. About 37 p.c. of their total area is in Canada, as shown in Table 3. These lakes include some of the largest bodies of fresh water in the world, so large that they have measurable, although very slight, tides.

3.—Elevations, Areas and Depths of the Great Lakes

Lake	Elevation Above IGLD (1955) ¹	Length	Breadth	Maximum Depth	Total Area	Area on Canadian Side of Boundary
	ft.	miles	miles	ft.	sq. miles	sq. miles
Superior (Thunder Bay).....	600.38 ²	383	160	1,301	32,483	11,524

¹ International Great Lakes Datum (1955) = Mean Water Level at Pointe au Père, Que.
age.

² Ten-year average.

Other large lakes in Canada, ranging in area from 12,300 to 9,500 sq. miles, are Great Bear Lake, Great Slave Lake and Lake Winnipeg. Apart from these, notable for size, there are countless smaller lakes scattered over the major portion of Canada lying within the Canadian Shield. For example, in an area of 6,094 sq. miles, accurately mapped, south and east of Lake Winnipeg, there are 3,000 lakes; in an area of 5,294 sq. miles southwest of Reindeer Lake in Saskatchewan, there are 7,500 lakes.

Lake storage is very valuable—it represents water that can be drawn upon in time of drought to be replaced in time of plenty. Lakes are natural regulators of river flow. But the true measure of a country's water wealth is the amount of water that can be depended upon to be replaced each year—the amount that remains after evaporation has been subtracted from precipitation. This is the amount that flows in its rivers. Here, too, Canada is very fortunate. The combined mean annual flow of all its rivers has been estimated at 3,500,000 cu. feet per second—about 9 p.c. of the total flow of all the rivers of the world. Set against a population of less than 1 p.c. of the world total, this constitutes a very generous endowment of fresh water.

4.—Elevations and Areas of Principal Lakes, by Province

NOTE.—Areas given are for mean water levels. For those reservoirs and lakes for which two elevations are given, HW means high water and LW low water. All elevations are in feet above mean sea level. "Total" refers to the area of the whole lake; "part" refers to the area within the designated province or territory.

It is understandable that Canada's history of settlement and industrial development has been moulded by the influence of its great rivers. The country's first industry, the fur trade, flourished because of the ready access to the interior provided by the St. Lawrence River, the Great Lakes and their tributary streams and the many other great and small waterways. Early exploration and settlement depended on this same natural means of access. The plentiful water supplies of the flat and fertile plains of southern Ontario and Quebec attracted an industrious farming people. The river-borne transportation of lumber and later the power of water-driven turbines were vital factors in the building of the country's industrial base. Today, more than ever, water is the key to Canada's development, supplying the renewable energy required for industrial growth, providing easy and relatively cheap transport for bulk raw materials and playing a vital part in the processing of those materials.

Table 5 lists the principal rivers of Canada and their tributaries. The tributaries and sub-tributaries are indicated by indention of names; thus, the Ottawa and other rivers are shown as tributary to the St. Lawrence, and the Gatineau and other rivers as tributary to the Ottawa.

The following map shows the major drainage basins of Canada. Probably the most important is the Atlantic drainage basin, being dominated by the Great Lakes-St. Lawrence system which drains an area of approximately 678,000 sq. miles and forms an unequalled navigable inland waterway through a region rich in natural and industrial resources. From the head of Lake Superior to Belle Isle at the entrance of the Gulf of St. Lawrence, the distance is 2,280 miles. The entire drainage area to the north of the St. Lawrence and the Great Lakes is occupied by the southern fringe of the Canadian Shield—a rugged, rocky, plateau region over the edge of which tumble many swift-flowing tributary rivers. These rivers, as well as the St. Lawrence itself, provide the electric power necessary to operate the great industries of the area. South of the St. Lawrence, the smaller rivers are important locally. The Saint John, for instance, drains a fertile area and provides most of New Brunswick's hydro power.

The Hudson Bay drainage basin is the largest in area and its main river is the Nelson. The Winnipeg River, a tributary of the Nelson, is completely developed for hydro-electric power but development of the Nelson itself is just beginning. The two branches of the Saskatchewan River, tributary to the Nelson, drain the great agricultural region of the mid-west and are now the sources of important irrigation projects.

The Arctic drainage basin is dominated by the Mackenzie, one of the world's longest rivers. It flows 2,635 miles from the head of the Finlay River to the Arctic Ocean and drains an area in the three westernmost provinces of approximately 700,000 sq. miles. Except for a 16-mile portage in Alberta, barge navigation is possible from the end of steel at Waterways on the Athabasca River to the mouth of the Mackenzie, a distance of 1,700 miles.

The rivers of the Pacific basin rise in the mountains of the Cordilleran Region and flow to the Pacific Ocean over tortuous, precipitous courses, rushing through steep canyons and tumbling over innumerable falls and rapids. They provide power for large hydro-electric developments and in season swarm with salmon returning inland to their spawning grounds. The Fraser River rises in the Rocky Mountains and toward its mouth flows through a rich agricultural area. The Columbia is an international river which has a total fall of 2,650 feet during its course and has thus a tremendous power potential. Although a considerable portion of the United States potential has been developed, Canadian development is relatively slight. The Yukon River is also an international river but, although the largest on the Pacific slope, is at present relatively unimportant economically.

Subsection 2.—Coastal Waters

The coastline of Canada, one of the longest of any country in the world, comprises the following estimated mileages (statute):—

Mainland—

Atlantic, 6,110; Pacific, 1,580; Hudson Strait, 1,245; Hudson Bay, 3,155; Arctic, 5,770; total, 17,860 miles.

Islands—

Atlantic, 8,680; Pacific, 3,980; Hudson Strait, 60; Hudson Bay, 2,305; Arctic, 26,785; total, 41,810 miles.

A comprehensive description of the coastal waters of Canada would require information from sciences such as oceanography, marine biology and meteorology. However, the basic factor in any study of the oceanic-continental margin is the physical relief of the sea floor, and the scope of the information presented here is therefore restricted to this and a few salient features of the Atlantic, Pacific and Arctic marginal seas surrounding Canada.

Atlantic.—Along this coastal area, the sea has inundated valleys and lower parts of the Appalachian Mountains as well as those of the Canadian Shield. The submerged continental shelf, protruding seaward from the shore, effects the transition from continental to oceanic conditions. This shelf is distinguished by great width and diversity of relief. From the coast of Nova Scotia its width varies from 60 to 100 miles, from Newfoundland 50 to 120 miles (at the entrance of Hudson Strait), and northward it merges with that of the Arctic Ocean. The outer edge of the shelf, known as the continental shoulder, is of varying depths of from 100 to 200 fathoms before the shelf suddenly gives way to the steep declivity leading to abyssal depths. The over-all gradient of the Atlantic continental shelf is slight but the whole area is studded with shoals, plateaux, banks, ridges and islands and the coasts of Nova Scotia and Newfoundland are rugged and fringed with islets and shoals. Off Nova Scotia, the 40-fathom line lies at an average of 12 miles from the shore and constitutes the danger line for coastal shipping. The whole floor of the marginal sea appears to be traversed by channels and gullies cutting well into the shelf.

The main topographical features of the Atlantic marginal sea floor are attributed to glacial origin but land erosion is an important factor. Eroded materials are carried seaward by rivers, ice and wind, and wave action against cliffs and shore banks washes away enormous masses that are deposited over the surrounding sea floor. The topography of the continental sea floor is therefore constantly changing and navigation charts of Canada's eastern seaboard must be continuously revised.

Hudson Bay and Hudson Strait bite deeply into the Continent. Hudson Bay is an inland sea 250,000 sq. miles in area having an average depth of about 70 fathoms; the greatest charted depth in the centre of the Bay is 141 fathoms. Hudson Strait separates Baffin Island from the continental coast and connects Hudson Bay with the Atlantic Ocean. It is 430 miles long and from 37 to 120 miles wide and its greatest charted depth of 481 fathoms is close inside the Atlantic entrance. Great irregularities of the sea floor are indicated but, except in inshore waters, few navigation hazards have been located.

Pacific.—The marginal sea of the Pacific differs strikingly from the other marine zones of Canada. The hydrography of British Columbia is characterized by bold, abrupt relief—a repetition of the mountainous landscape. Numerous inlets penetrate the mountainous coasts for distances of 50 to 75 miles. They are usually a mile or two in width and of considerable depth, with steep canyon-like sides. From the islet-strewn coast, the continental shelf extends from 50 to 100 sea miles to its oceanward limit where depths of about 200 fathoms are found. There the sea floor drops rapidly to the Pacific deeps, parts of the western slopes of Vancouver Island and the Queen Charlotte Islands lying only four miles and one mile, respectively, from the edge of the declivity. These great detached land masses are the dominant features of the Pacific marginal sea. As is to be expected in a region so irregular in hydrographic relief, shoals and pinnacle rocks are numerous, necessitating cautious navigation.

Arctic.—The submerged plateau extending from the northern coast of North America is a major part of the great continental shelf surrounding the Arctic Ocean, on which lie all the Arctic islands of Canada, Greenland, and most of the Arctic islands of Europe and Asia. This shelf is most uniformly developed north of Siberia, where it is about 500 miles wide; north of North America it surrounds the western islands of the Archipelago and extends 50 to 300 miles seaward from the outermost islands.

The floor of the submerged part of this continental margin is nearly flat to gently undulating, with here and there isolated rises or hollows. Most of it has an average slope, seaward, of about one half a degree, with an abrupt break at the outer edge, to the continental slope whose declivity is commonly six degrees or more. From the Alaskan border eastward to the mouth of the Mackenzie River the shelf is shallow and continuous with the coastal plain on the mainland; the outer edge of the shelf, or continental shoulder, lies at a depth of about 35 fathoms and about 40 nautical miles offshore. This shelf is continuous with that north of Alaska and Siberia. Near the western edge of the Mackenzie River delta, the continental shelf is indented by a deep valley (the so-called Herschel Sea Canyon) whose head comes within 15 miles of the coast. Between Herschel Sea Canyon and Amundsen Gulf, the typical features of the continental shelf are replaced by the submerged portion of the Mackenzie River delta, which forms a great pock-marked undersea plain, mostly less than 30 fathoms deep, up to 75 nautical miles wide and 250 miles long.

North and east of the submerged portion of Mackenzie River delta, the continental shelf, while typical in form, is more deeply submerged than that off the mainland and Alaska. Its gently undulating surface is, for the most part, 200 fathoms or more below sea level, and the well-defined, nearly straight continental shoulder is mostly more than 300 fathoms deep, giving way to the smooth continental slope which extends without significant interruption to the floor of the abyssal Canada Basin at a depth of about 2,000 fathoms. The deeply submerged continental shelf extends along the entire west coast of the Canadian Arctic Archipelago from Banks Island to Greenland. All of the major channels between the islands—Amundsen Gulf, McClure Strait, Prince Gustav Adolf Sea, Peary Channel, Sverdrup Channel and Nansen Sound—have flattish floors at about the same depth as the shelf and appear to enter it “at grade”, although there are a few local irregularities that may be the result of glacial action. No deep indentations or canyons are known to cut the

continental slope or continental shelf off the Archipelago, except one sinuous canyon that heads off Robeson Channel at the northeastern end, close to the coast of Greenland. The submerged sides of the channels of the Archipelago, and the slopes from the shoreline at the western edge of the islands to the inner edge of the deeply submerged shelf, are in many places marked by a series of steps or terraces.

The continental shelf bordering the Arctic Ocean as well as the adjacent mainland, particularly near the delta of the Mackenzie River, and the islands of the Canadian Arctic Archipelago have been subjected to increasingly intensive scientific study and mineral resource exploration during the past 15 years. Co-ordinated and continuing programs of research and survey have studied the bedrock geology, the development of the terrain, the sediments on the sea floor and the nature and history of the icecaps. Gravity, seismic, aeromagnetic, geomagnetic and geothermal investigations have obtained information on the physical characteristics and structure of the rocks beneath the surface, and the nature and stability of the crust underlying the islands, the continental shelf and the continental slope. A complementary program of geodetic, topographic and hydrographic surveys has provided the necessary background maps and charts, and information about both terrestrial and marine physiography for these studies. Along with the technical surveys and investigations in the physical sciences, there have been less intensive but very relevant studies of the biology of the Arctic lands and oceans. The result of all these activities is that a great deal of reliable scientific information in a wide range of subjects is now available for an area about which very little was known two decades ago.

Much of this activity has been spurred by geological indications that conditions were favourable for the accumulation of petroleum deposits in the thick assemblages of sedimentary rocks bordering the Arctic Ocean. By 1960, petroleum exploration permits had been filed for essentially all of the land areas of the western Canadian Arctic Coast and Archipelago, and it was becoming apparent that the favourable geological conditions continued under many of the channels between the islands and under almost all of the continental shelf south of Sverdrup Channel. By 1970, exploration permits had been taken up over virtually all of this area, and over a large part of the upper portion of the continental slope. A vigorous program of geophysical and geological exploration is being pursued by the oil industry and many studies are under way in connection with the engineering and technical problems of development and transport in the arctic environment and ice-covered ocean. The role of the investigations of the Canadian Government is consequently no longer one of finding potentially favourable areas or of stimulating interest in the resources of the region; it is one of providing wise management, of learning enough about the Arctic environment, both marine and terrestrial, and its processes so that the operations connected with resource development and transport can be as safe and efficient as possible, without undue undesirable effects on the arctic terrain and ocean and its wildlife, and so that the resources of the area can be used to the greatest long-term good of the residents of the area,

particularly the native peoples, and of the people of Canada as a whole. The present researches and surveys are therefore placing emphasis on charting possible shipping routes for supertankers or cargo submarines; on studying the nature and behaviour of sea ice and its effects on vessels and structures; on the problems of prevention and control of oil pollution in cold and ice-covered waters; and on the problems of constructing harbours, townsites, pipelines and overland transportation routes along the Arctic Coast. Study is being given to the unique ecosystems that have developed in the Arctic environment and their susceptibility to violent upset by relatively minor human activities. It is being realized that one of the greatest resources of Canada is its relatively unspoiled Arctic Coast, its unpolluted Arctic Ocean, and the present inhospitable but untrammelled free space and natural wildlife of the Arctic lands and oceans. The value of this resource to man, if it is not destroyed, will grow with each passing generation as free, open and unpolluted lands and waters become more scarce and more expensive to regain elsewhere in the world. It is the aim of the present researches to facilitate the wise use of these present economic resources without at the same time adversely affecting its permanent value.

Subsection 3.—Islands

The largest islands of Canada are in the North and all experience an arctic climate. The northern group extends from the islands in James Bay to Ellesmere Island which reaches 83°07'N. Those in the District of Franklin lie north of the mainland of Canada and are generally referred to as the Canadian Arctic Archipelago; those in the extreme north—lying north of the M'Clure Strait—Viscount Melville Sound—Barrow Strait—Lancaster Sound water passage—are known as the Queen Elizabeth Islands.

On the West Coast, Vancouver Island and the Queen Charlotte Islands are the largest and the most important but the coastal waters are studded with many small rocky islands.

The Island of Newfoundland forming part of the Province of Newfoundland, the Province of Prince Edward Island, Cape Breton Island forming part of the Province of Nova Scotia, Grand Manan and Campobello Islands forming part of the Province of New Brunswick, and Anticosti Island and the Magdalen group included in the Province of Quebec are the largest islands off the East Coast.

Notable islands of the inland waters include Manitoulin Island (1,068 sq. miles in area) lying in Lake Huron, the so-called Thirty Thousand Islands of Georgian Bay and the Thousand Islands in the outlet from Lake Ontario into the St. Lawrence River.

Subsection 4.—Mountains and Other Heights

The predominant geographical feature in Canada is the great Cordilleran Mountain System which contains many peaks over 10,000 feet in height. The highest peak in Canada is Mount Logan in the St. Elias Mountains of Yukon Territory, which rises 19,850 feet above sea level. The highest elevations in all parts of the country are shown in Table 7 in feet above mean sea level.

7.—Principal Heights in each Province and Territory

NOTE.—Certain peaks, indicated by an asterisk (*), form part of the boundary between political divisions. Although their bases technically form part of both areas, they are listed only under one to avoid duplication. Elevations are given in feet above mean sea level.

Section 2.—Geology*

The bedrock foundation of Canada and its adjacent continental shelves seem rigid and unchanging to human eyes, yet, in terms of geological time, these rocks represent only a momentary stage in the evolution of the Continent, an evolution which began more than 4,000,000,000 years ago. Geological study of most of the present land surface of Canada has shown that at various periods and in various regions dark molten rocks rose from great depths, volcanoes erupted on the ancient land and sea floors, thick sequences of sediments accumulated, granites were either intruded as molten magma or derived from earlier rocks during intense folding and mountain building, erosion wore down or subdued the older mountain chains, shallow seas repeatedly encroached on and receded from the Continent of today, continental glaciers covered most of Canada and, as part of these geological processes, valuable minerals and fossil fuels became concentrated under exceptionally favourable conditions. These interrelated geological processes have produced the buried crust and the present face of Canada. They control the distribution of its economic mineral deposits, its physiography and, in large part, its present and potential land use.

* An outline extracted from a more detailed article on "Geology and Economic Minerals of Canada", prepared by W. D. McCartney of the Geological Survey of Canada, appearing in the 1967 Year Book, pp. 19-32.

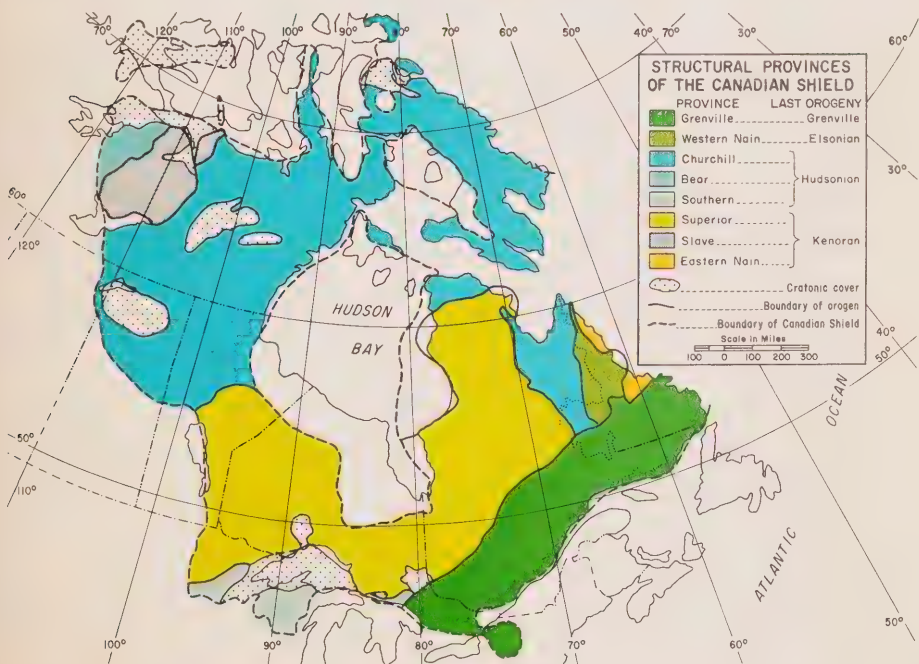

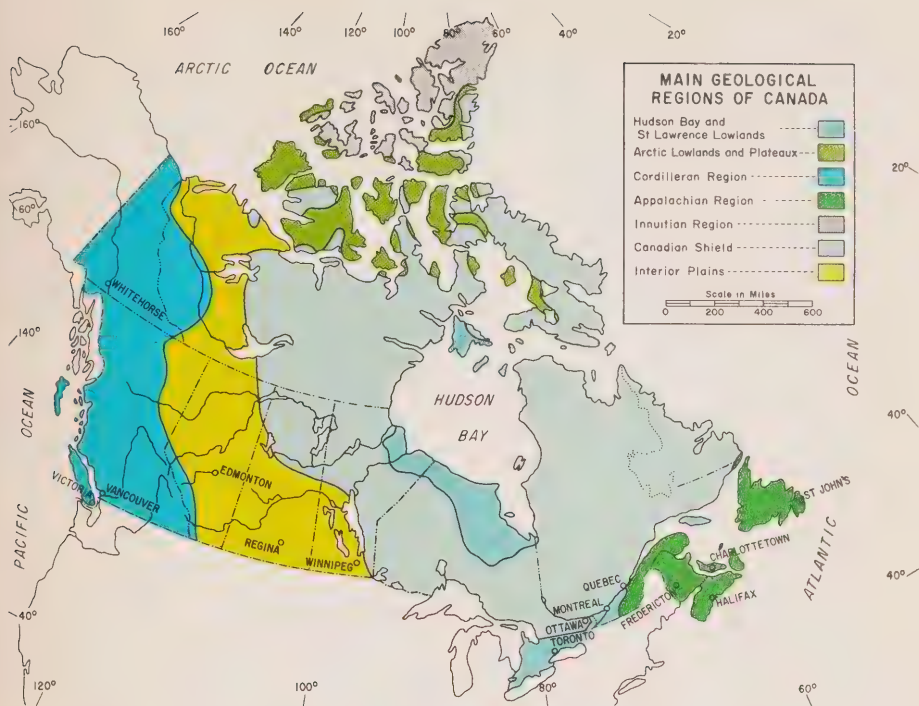

The primary geological subdivisions of Canada are outlined in the following sections. The Canadian Shield forms the ancient nucleus of the Continent. As well as comprising the vast areas exposed in Central and Northern Canada, the Shield extends beneath the veneer of younger marine sediments exposed at the present surface in the Hudson Bay region, some Arctic islands, the St. Lawrence Lowlands and the Interior Plains. West of the Interior Plains, and north and southeast of the Canadian Shield, deep, elongate troughs (geosynclines) developed. These geosynclines received sediments and volcanics which, by folding, were converted into the mountain belts of the Cordilleran, Innuitian and Appalachian regions.

The Canadian Shield.—Precambrian evolution of the present Canadian Shield extended over more than five sixths of known geological time. During this immense interval, many cycles of volcanism, sedimentation, intrusion, metamorphism, mountain building, erosion and ore formation were completed. The complexities of this history have become better understood as geological reconnaissance mapping has progressed and as absolute ages of minerals have been determined by isotopic ratios from about 1,500 well-distributed samples of the Canadian Shield. Many of the absolute ages represent the ages of four main periods of mountain building, termed orogenies. There are eight structural provinces recognized in the Shield, each of which is defined by the equivalent isotopic ages of their terminal orogenies as well as being characterized by variations in rock types, degree of metamorphism, and dominant types of ore deposits. Following one or more major orogenies in a region, that portion involved was stabilized, and relatively undeformed younger Precambrian erosion products were deposited to form basins of cratonic cover rocks, most of which are shown on the map of the Shield. These relatively undeformed late Precambrian basins and remnants of early Palæozoic sediments show that the Canadian Shield has been remarkably stable since late Precambrian time, subject only to encroachment of younger seas and varying degrees of uplift. In relatively recent geological times, Pleistocene glaciation with scouring of bedrock and deposition of clastic materials has profoundly affected the present drainage and physiography of the region.

A large part of the Shield, extending from Georgian Bay to the Strait of Belle Isle, has long been recognized as forming a distinct segment called the "Grenville". It was named after the Grenville series, characterized by crystalline limestone, impure limy strata, and large areas of sedimentary gneisses in various stages of alteration to granite. The eastern part of the province contains large igneous intrusions of anorthosite. The age relations between Grenville strata and those of the neighbouring Superior province are puzzling. Near Sudbury, as well as at the south end of the Labrador Trough, beds can be traced across the boundary into more metamorphosed rocks of Grenville type. It is believed, therefore, that the distinctive features of the Grenville may be related more to the time and degree of metamorphism than to distinctions in the original age of deposition of strata.

The areas of undeformed Precambrian cratonic cover rocks shown on the facing map represent dominantly clastic detritus washed into basins from the consolidated, nearby, older rocks. At times, marine incursions into these basins led to deposition of limestone and dolomite, and volcanics were deposited in others.

The Appalachian Region.—This region comprises the Atlantic Provinces and southeastern Quebec and is the northern continuation of a long belt of folded strata extending along the eastern side of the United States. It is on the site of a long, linear trough or geosyncline that existed mainly in Palæozoic time in which great thicknesses of sedimentary and volcanic strata were laid down. The northwestern boundary of the region lies adjacent to the Canadian Shield and to the St. Lawrence Lowlands. The strata in the Appalachians have been folded and faulted along axes that strike northeasterly except for local regions such as the Gaspé Peninsula where strikes swing to the east. Thus, strata of different kinds and ages and some belts of intrusive rocks normally form northeasterly-

trending bands, many of which are responsible for development and orientation of peninsulas, bays and ridges of the region. Two principal periods of orogeny called the Taconic and the Acadian have been recognized. The Taconic occurred near the close of Ordovician time and the Acadian about Middle Devonian time. In Canada the Taconic disturbances were fairly widespread, the Acadian were more so, affecting areas that were previously affected by the Taconic as well as areas that were not, and the Appalachian orogeny, which was a major feature in parts of the United States, was of minor and local importance.

Metamorphosed Precambrian rocks of Grenville type are exposed to form the Long Range of western Newfoundland and small areas in Cape Breton and New Brunswick. On the east flank of the Appalachian geosyncline, as exposed in southeastern Newfoundland, younger Precambrian volcanics and sediments are relatively unaltered and were intruded by small granite bodies 580,000,000 years ago. Although Precambrian rocks probably underlie much of the central Appalachians, they are buried beneath the thick Palæozoic sequence.

Cambrian slates, minor limestones and local areas of volcanics lie above and adjacent to Precambrian rocks. Massive sulphide deposits in schists derived from Cambrian volcanics in southern Cape Breton and southeastern Quebec were formerly mined. The overlying Ordovician beds were formed at the early stage of development of the Appalachian geosyncline. From west to east, and depending on their position in the geosyncline, the thick Ordovician sections comprise limestone and/or slate in western Newfoundland and adjacent to the St. Lawrence Lowlands in southeastern Quebec. Silurian strata are rather similar to Ordovician rocks but are not known to contain large mineral deposits. Unlike the Ordovician submarine volcanics, some or most of the Silurian volcanics were formed on land. This may be one factor in the marked difference in known ore content of the two volcanic assemblages.

In Devonian time, granite batholiths were emplaced in the Atlantic Provinces, and smaller stocks of the same age were intruded in Gaspé and southeastern Quebec. At this time, older beds were folded and metamorphosed to varying degrees, particularly near the margins of the granites.

Following the folding and granite intrusion that formed the Appalachian Mountains, adjacent basins were rapidly filled with coarse and progressively finer-grained detritus eroded from the adjacent mountains. Some areas included marine beds, such as the petroliferous Albert shales of eastern New Brunswick which yield oil and gas. After initial infilling of basins, shallow Mississippian seas encroached on the valleys and deposited limestones. Many thousands of feet of clastic sediments were deposited after the Mississippian seas retreated. These beds of Pennsylvanian age contain the commercial coal measures of Nova Scotia. In Triassic time, outpourings of basalt, particularly preserved adjacent to and below the Bay of Fundy, terminated rock-forming processes in the Appalachians. Subsequent erosion has yielded the present, fairly subdued topography of this former mountain chain.

The Cordilleran Region.—The Cordillera of Western Canada consists of three parallel northwest-trending geological and topographical systems. The Eastern System of western Alberta, eastern British Columbia, eastern Yukon, and western Northwest Territories includes the Rocky, Richardson, Franklin and Mackenzie Mountains and foothills, and several intervening plateaux. Comprising the Western System are the Coast Mountains along the west mainland of British Columbia, and the St. Elias Mountains in southwestern Yukon, the Queen Charlotte Islands and Vancouver Island. The Interior System lies between the Eastern and Western Systems. It contains the plateaux, plains and subdued mountain ranges of the interior of British Columbia and Yukon Territory.

Unmetamorphosed Precambrian to Cretaceous sedimentary strata form most of the Eastern System. These sedimentary strata, which have been uplifted several thousand feet by fault movements, are well exposed in the Rocky Mountains. The Interior System is composed largely of metamorphic, sedimentary and volcanic rocks of Precambrian to

Mesozoic ages, which are intruded by numerous, generally unconnected, granitic stocks and batholiths. In places, these rocks are overlain by great thicknesses of Cretaceous and Tertiary volcanic and sedimentary strata. Flat-lying Tertiary basalt flows form many of the plateaux. In the Western System, the rugged Coast Range consists of almost continuous exposures of steeply eroded granitic rocks of Mesozoic and Tertiary ages flanked on both sides by late Palaeozoic and Mesozoic volcanic rocks and by basins of Cretaceous and Tertiary sedimentary rocks.

During late Precambrian times, beds of quartzite, argillite, dolomite and other sedimentary rocks now comprising the Purcell and Windermere beds were deposited in the eastern Cordilleran geosyncline, a vast shallow sea that extended from south of the present Canada-United States border to the Arctic Ocean. From Cambrian until mid-Devonian time, sedimentary strata consisting of shale, quartzite and limestone continued to be deposited in the area which now forms the Eastern and Interior Systems. In southeastern British Columbia, the world-famous Sullivan zinc-lead orebody lies in Purcell beds and is thought to have formed during late Precambrian time.

Beginning in the mid-Devonian and lasting until early Jurassic, the Western System and most of the Interior System consisted of a deep oceanic trough in which accumulated submarine basalts and fine argillaceous and cherty sediments such as those of the Permo-Carboniferous Cache Creek Series and the Triassic Takla Series. Meanwhile, sedimentary strata were forming in the more shallow waters of the Eastern System, east of the present Rocky Mountain Trench. Thus, in the Rocky Mountains, Palaeozoic limestones, dolomite, quartzite and shale are overlain in many places by similar Mesozoic rocks.

The first large granitic bodies were intruded into rocks of the Interior and Western Systems during early Jurassic time. They were composed mainly of granodiorite and quartz diorite, but ranged in composition from gabbro to granite. These intrusions were accompanied by folding, faulting and metamorphism. Although this orogeny may have been most intense during late Jurassic to early Cretaceous time, intrusion continued until early Tertiary time. Many mines in the Cordillera are related to Mesozoic and Tertiary intrusions. Uplift of the rocks during these processes created mountain chains and, by early Cretaceous time, rhyolites, andesites, basalts and sediments were being deposited in inter-mountain basins largely separated by the uplifted areas. Erosion of the mountains followed and, in late Cretaceous time, sandstones, conglomerate, shale and extensive beds of coal accumulated in large isolated basins such as that now occupied by the Nanaimo Series on Vancouver Island. Gradual uplift continued so that by Tertiary time the basins were very local and entirely continental. Sandstones and other sediments derived from elevated areas continued to be deposited in the low-lying valleys.

Uplift and mountain building in the Eastern System was delayed until the Laramide Orogeny in early Tertiary time. Unlike the earlier orogenies to the west, no significant granitic bodies were intruded in the Eastern System. In many parts of the Rocky Mountains, Precambrian and Palaeozoic strata were thrust several miles to the east along low-angle westward-dipping fault planes. Thus, these transported older rocks commonly came to rest above younger beds. At the same time and again in late Tertiary time, the eroded Western and Interior System rocks, as well as those of the Eastern System, were again uplifted. Erosion, including glacial scouring, which in places has continued to the present day, formed deep valleys in the elevated rocks and has produced the present configuration of the Coast Range, the Rockies and the intervening mountain chains.

In the Interior System, much lava was deposited on the plateaux at various times during the Tertiary period, mainly in or about Miocene time. The lavas are chiefly basaltic and apparently welled from long fractures rather than from individual volcanoes. Sandstone, shale and volcanic ash were deposited in local freshwater basins in the same belt.

In latest Tertiary and Pleistocene times, some uplift and minor volcanic deposition occurred in the Western and Interior Systems. Very recent, post-glacial volcanic activity is represented by several well-preserved cinder cones in north, southwest and central British Columbia.

Glaciation, as in other parts of Canada, was widespread in the Cordillera during the Pleistocene Epoch, and glaciers persist today in many mountain systems, chiefly in the St. Elias and Coast Mountains and the Columbia Ice Field in the Rockies. A large part of the Yukon Territory, however, escaped Pleistocene glaciation because the high St. Elias Mountains barred moisture-laden winds from the Pacific to such an extent that ice did not accumulate in parts of the interior, despite the depressed temperatures of the time. This lack of glaciation was largely responsible for the preservation of the Klondike placer gold deposits.

Innuitian Region.—North of the Arctic Plains and Plateaux, where Palæozoic limestones rest on Precambrian generally-stable crystalline rocks, deep crustal depressions were initiated in late Proterozoic time and received thick deposits of carbonates and shales (miogeosynclinal type) and, in northern Ellesmere Island, volcanics and greywackes (eugeosynclinal type). In the southern basins, Proterozoic sediments are mainly carbonates and coarse-to-fine clastic sediments. Overlying these conformably are thick layers of lower Palæozoic carbonates which are thicker and include more abundant dark shales to the north. Middle Ordovician gypsum beds extend in places across the southern basins. Carbonates are admixed with muds and sands in parts of the Upper Silurian to Middle Devonian beds, and the influx of these clastic materials probably reflects relatively minor orogenies and periodic uplifts such as the Boothia Arch in the region. Folding of the eugeosynclinal volcanics of northern Ellesmere Island produced land areas from which sands were swept southward to form Upper Devonian non-marine sandstones in the miogeosynclinal basins. The total assemblage of sediments is more than 35,000 feet thick in some districts. The dominant folding of the Franklinian geosyncline, called the Ellesmerian orogeny, occurred near the close of Upper Devonian time. With the exception of the Cornwallis fold belt discussed below, the resulting folds of the Innuitian Region trend southwesterly from northern Ellesmere Island and swing westerly through the Parry Islands. The Cornwallis fold belt interrupts this trend at right angles because it lies along a buried north-trending prong of Precambrian rocks, which extend from exposures of the Boothia Peninsula. This elongate Precambrian basement rose periodically at least six times to produce north-trending faults and folds in the overlying Palæozoic beds of the Cornwallis fold belt, whereas the Franklinian geosyncline was deformed by somewhat younger and more widespread compressional crustal forces.

Following the Ellesmerian orogeny, a vast area including the present Sverdrup Islands and much of western Ellesmere Island was depressed to form the site of deposition of a composite thickness of 60,000 feet of Pennsylvanian to Tertiary volcanics, shales, sandstones, some gypsum and, in the upper part, a thick assemblage of non-marine clastic sediments. The rocks of this Sverdrup Basin were deformed about the end of the Mesozoic Era by the Laramide orogeny. Late Palæozoic gypsum beds, which tend to flow under high pressure, were forced upward to intrude overlying Mesozoic beds. Gypsum diapiric domes later penetrated Tertiary beds.

Arctic Lowlands and Plateaux.—These geological and physiographic divisions lie in large basins separated by arches and belts of exposed Precambrian crystalline rocks. Gently inclined or flat sediments underlying the basins tend to be thin sandstones and limestones near the basal contact with metamorphosed Precambrian rocks but limestones and dolomites of middle Ordovician to early Devonian age are the principal rock types and at some localities are estimated to be up to 18,000 feet thick. Shales, sandstones and restricted areas of conglomerates of middle Devonian to late Devonian age are normally the youngest rocks preserved.

Arctic Coastal Plain.—This plain comprises late Tertiary or Pleistocene sand and gravels, which dip gently seaward along the northern exposed border of the Innuitian Region. The very young beds cover the extensions of eroded fold belts and the Sverdrup Basin. Although of minor land extent, they or their equivalents probably extend far out on the Arctic continental shelf.

The Interior Plains.—The Interior Plains are underlain by undisturbed or gently flexed or tilted sedimentary strata, which overlap the western border of the Canadian Shield and merge with the eastern foothills of the Cordilleran region. The Shield slopes at a rate of 15 feet per mile under the Great Plains, in the western part of which the overlying strata reach a thickness of 10,000 feet. The older overlying beds have been bevelled by erosion along the border of the Shield, exposing in central Manitoba marine beds of limestone, sandstone and shale of Ordovician, Silurian and Devonian ages. Farther north the exposed Palaeozoic strata are mainly Devonian. The Palaeozoic formations are overlain by early Mesozoic strata of marine origin and these by both marine and freshwater Cretaceous formations, which are the uppermost strata in much of Saskatchewan and Alberta. In places, however, as at Turtle Mountain in Manitoba and the Cypress Hills in Saskatchewan, these are overlain by remnants of early Tertiary formations.

St. Lawrence and Hudson Bay Lowlands.—The St. Lawrence Lowlands are underlain by marine beds deposited during much of Palaeozoic time. Rather similar late Ordovician to Devonian beds are exposed in the Hudson Bay Lowlands. Small areas of Palaeozoic beds are preserved at various localities on the Canadian Shield between these two Lowlands and suggest that arms or shallow straits of Palaeozoic seas may have connected the present Hudson Bay and the St. Lawrence Lowlands areas. The St. Lawrence Lowlands from Quebec City to Windsor are occupied by about one half of the population of Canada, supported by much arable land and major industrial concentrations. These Lowlands are divided by an exposed southeasterly-trending prong of the Canadian Shield called the Frontenac Axis, which extends into the United States northeast of Lake Ontario. Southwest of the Frontenac Axis, marine sedimentary rocks of Cambrian to Mississippian age rest on buried Precambrian rocks. Known formations there have an aggregate thickness of almost 6,000 feet. Rocks are mainly limestones, shales and sandstones deposited in generally shallow seas.

Surficial Deposits

The continental glaciation of most of Canada has removed weathered bedrock and residual soils and has almost certainly removed some types of ores such as pre-Pleistocene placer gold deposits, laterites, and upper portions of metallic and manganiferous ore deposits, which had formerly been enriched under stable near-surface conditions. Material deposited includes dominantly clastic detritus such as tills, esker gravels, outwash gravels and sands, or rock flour deposited in lakes or shallow seas in the form of multiple layers of varved clay or massive clay beds. Maps showing the surface distribution of these materials, published by federal agencies, reflect some physiographic features and present and potential land use.

Section 3.—Federal Government Surveying and Mapping*

The needs for maps and surveys of Canada are met mainly by the Department of Energy, Mines and Resources. Although not all Branches of this Department make surveys and compile maps, many of them are involved in such work either wholly or partly. They compile topographical, geological and aeromagnetic maps, aeronautical and hydrographic charts, as well as specialized maps showing electoral district boundaries, land use and other features. In carrying out these tasks, the Department is guided partly by long-range plans based on general national needs and partly by requests from other government agencies and private enterprise. Some types of maps and surveys are also produced by provincial and private agencies and, to avoid duplication, the Department co-ordinates its work with these bodies. Other types—such as hydrographic charts—are produced exclusively by the Department.

* Prepared by H. G. Classen, Public Relations and Information Services, Department of Energy, Mines and Resources, Ottawa.

The staff of the Department numbers about 4,000, of whom 1,000 are scientists and engineers and 1,300 are technicians. Each year, some 1,500 men are sent into the field to make surveys and to carry out research. Of the various Branches, the following are particularly concerned with surveying and mapping: Surveys and Mapping Branch (geodetic and topographic surveys, legal surveys of Canada lands, geographical atlases, electoral maps and aeronautical charts); Marine Sciences Branch (hydrographic charts of sea coasts and inland navigable waters); Inland Waters Branch (a wide variety of surveys on inland waters); Geological Survey of Canada (geological features); and Earth Physics Branch (geophysical maps).

Types of Surveys.—In the field of geodesy, the Geodetic Survey maintains a network of horizontal and vertical control points across Canada. Much of its present activity is centred on achieving greater density of control and closing gaps in Southern Canada. The ultimate goal is the establishment of at least one horizontal and vertical control point within 10 miles of any point in established and economically important areas. During the 1969 survey season, 38 field parties were involved in this activity.

The Topographical Survey is proceeding with the compilation of topographical maps. The mapping of Canada at the scale of four miles to one inch is complete, and this series will now only be revised and updated from time to time. In the scale of one mile per $1\frac{1}{4}$ inches, 4,011 map sheets are now available, of a planned 13,150. Sheets published to date cover most of the settled areas of Canada and certain wilderness areas of interest because of resources or defence requirements. In the relatively large scale of one mile per $2\frac{1}{2}$ inches, 578 maps are available, covering all major cities and their suburbs. Wide acceptance has been found for photomaps, a substantially new map-type made possible by advances in air photography and photogrammetry. The Topographical Survey relies mostly on aerial photography in mapping and does not send out field parties.

The Legal Surveys Division is responsible for the technical management of legal surveys of land under federal jurisdiction, such as the northern Territories, national parks, and Indian reserves. It also executes such surveys on behalf of administering departments, collaborates in the demarcation of provincial boundaries, prepares descriptions of electoral districts and generally provides land-surveying services to other departments. During the 1969 surveying season, this Division sent out 15 field parties.

The Surveys and Mapping Branch is the major agency in Canada for the preparation of aeronautical charts showing airports, airways and radio and other aids necessary for air navigation. As a service to map-makers, prospectors, engineers, foresters, town planners and others interested in that field, the Department maintains a National Air Photo Library containing a collection of all air photographs taken by or for the Federal Government—about 3,325,400 black-and-white prints and 13,492 colour prints. During the course of a year, the Library may receive requests for as many as 850,000 copies of those prints. A western branch of the Library is located in the Institute of Sedimentary and Petroleum Geology in Calgary.

The Marine Sciences Branch of the Department produces and distributes all Canadian navigational charts and tidal information. Its surveys of the geological and geophysical characteristics of the ocean floor provide basic information for mineral exploration and its studies of oceanographic phenomena are designed to support fisheries, transportation, coastal engineering and defence. Branch headquarters is in Ottawa and regional offices are located in Dartmouth, N.S., and Victoria, B.C. It operates a fleet of 11 ships; five are based in Nova Scotia, two in Ontario at Burlington on Lake Ontario, and four in British Columbia. A large number of sounding launches are used, either in conjunction with the ships or independently.

The Hydrographic Service of the Branch distributes over 300,000 charts a year. The number of separate charts on issue stands at about 1,200, including nautical as well as special charts such as those used by petroleum companies in their search for submarine oil deposits. A growing number of charts is being sold to owners and operators of pleasure

craft plying Canada's lakes and rivers. In oceanography, the most notable recent event was the circumnavigation of the Americas by the survey ship *Hudson*, from November 1969 to October 1970. The ship's scientific staff collected a large variety of data in the Atlantic, Pacific and Arctic Oceans.

The Inland Waters Branch carries out a wide variety of surveys on Canada's inland waters, with emphasis on water pollution, conservation and use. Among these are continuous surveys and surveillance of the physical environments of lakes; water levels, stream flow, sediment transport and shore erosion; groundwater; and existing and projected uses of water in Canada.

Geological surveys provide an inventory of the potential mineral resources of Canada, aid in the discovery of mineral deposits, and assist in other aspects of the national economy influenced by geological factors. Each year, approximately 100 parties are placed in the field. Large reconnaissance projects are mounted in the northern regions of the country, and more detailed investigations in the better-known southern areas. Geological maps are published either separately or, more commonly, as part of scientific papers.

Both the Geological Survey and the Earth Physics Branch carry out geophysical surveys, resulting in maps showing such features as variations in terrestrial magnetism, gravity and seismology. The geophysicists of the Geological Survey are interested mainly in outlining local magnetic variations indicative of mineral deposits, while those of the Earth Physics Branch map the earth's total magnetic field. The Earth Physics Branch operates 25 fully instrumented seismic observatories throughout Canada, whose records are used in compiling and updating an earthquake zoning map of Canada of interest to architects and engineers. A gravity map of Canada is also being published and updated by the Branch.

In the drafting and printing of the maps, highly advanced techniques for the automatic transfer of terrain features from air photos to drafting sheets and precise lithographing are combined to assure speedy processing of field data and the production of colourful, easily understood and relatively inexpensive maps for every type of user, from vacationer to town planner and from prospector to pilot. The Department operates a large modern plant to print the maps and charts compiled by its several Branches as well as maps and charts compiled by other government departments and agencies. The Surveys and Mapping Branch has a stock of 20,800,000 maps from which it distributes about 3,000,000 annually.

Section 4.—Archaeology

The 1968 Year Book contains a special article on "Archaeology in Canada", prepared by scientists of the National Museum of Man, National Museums of Canada. The article is a review of the study of Canadian prehistory and summarizes the interpretations made, up to the point of writing, of findings by scientists working in this discipline throughout the years. The 1969 Year Book, at pp. 21-24, and the following paragraphs update the information in the article relating to recent archaeological work undertaken in Eastern, Western and Northern Canada by outlining National Museum of Man staff and contract-supported field work conducted during 1968 and 1969, respectively.

Archaeological Work in Eastern Canada.—During 1969, J. V. Wright investigated a number of sites in the Bruce Peninsula region of Ontario. Particularly important was the Schaefer Farm site where excellent bone preservation will permit determination of the subsistence pattern of the Archaic occupants of the site. He also excavated a multi-component fishing camp at the narrows between Lake Simcoe and Lake Couchiching in Ontario. Salvage excavations were carried out at the fifteenth-century Nodwell site in Port Elgin, Ont., and positions of at least six longhouses and sections of the palisade were exposed.

R. Marois conducted a survey between Plaisance and Oka on the north shore of the Ottawa River in Quebec. The objectives of this project were to discover the nature of the

Laurentian Archaic in that area and the development of the so-called Laurentian Iroquois. A survey carried out on the Gatineau drainage system south of La Vérendrye Park revealed a few almost completely eroded sites and some surface specimens on the shores of the lake.

D. Sanger continued field work in the Passamaquoddy Bay region of New Brunswick, sponsored jointly by the National Museum of Man and the Province of New Brunswick. Excavations were concentrated at the mouth of the Digdeguash River where four sites were sampled and nearly 1,000 artifacts recovered, including stone projectile points, pottery, and bone, antler and tooth implements. Most of the sites appear to represent relatively recent occupation but the Carson site may have a pre-ceramic component dating from the first millennium B.C.

D. MacLeod continued a salvage survey project in the Churchill Falls area of central Labrador. An attempt to salvage the prehistory of the upper Churchill River before it is flooded by the Churchill Falls hydro development was terminated because of the high water level. At Twillingate in Newfoundland, excavation was completed on three related sites pertaining to what has been called the Maritime Archaic culture. Test excavation in the nearby area located two additional sites of the same culture, one of which was a "red paint" cemetery.

Contract-supported work in Eastern Canada included the following projects: Jacques Bordaz, Université de Montréal, undertook the archaeological administration of the Pointe-aux-Buissons site excavation near Beauharnois in Quebec, which is being carried out by members of the Quebec Prehistoric Archaeology Society; K. C. A. Dawson, Lakehead University, excavated prehistoric sites on the shores of Lake Nipigon in Ontario; W. M. Hurley, University of Toronto, carried out archaeological salvage on the Montreal River site, which is a major stratified site containing sequential occupations extending over a period of at least 4,000 years; and W. Fitzhugh, Cambridge, Massachusetts, conducted an archaeological survey with site excavation at Lake Melville in Labrador.

Archaeological Work in Western Canada.—R. Wilmet continued work at Anahim Lake in west-central British Columbia. At the Potlatch site two structures and two trash mounds were excavated, as well as a number of exploratory trenches, and additional material representing the early historic Chilcotin occupation was recovered. The house structures differed from the Chilcotin winter houses uncovered in 1968, and at least one was definitely associated with microblades. This material represents a much earlier component of which sporadic remains were encountered in 1968. Approximately the same situation existed at the Goose Point site where a Chilcotin winter lodge and an earlier structure were excavated. The Chilcotin house yielded one trade item, indicating contemporaneity with the Chilcotin component at Potlatch. The earlier dwelling was associated with projectile points indicating an earlier time level, perhaps coterminous with the microblade complex at the Potlatch site.

G. F. MacDonald carried out the fourth and final year of the Prince Rupert Harbour project on the northern coast of British Columbia with a crew of 36 university students. This was the second year of investigations at site GbTo-31, a winter village of the Coast Tsimshian on Digby Island. Excavations in 1968 determined the initial occupation of the site at more than 4,000 years ago, and a depth of cultural deposits of as much as 14 feet. A collection of comparative osteological samples of birds and aquatic and land mammals of the north Pacific Coast was made and, as part of a preservation program, latex moulds were made of totem poles from abandoned historic Tsimshian villages on the Skeena River. Of particular note was the excavation of two house sites, each of which contained remains of a series of stratified house floors spanning an estimated 2,000 years and possibly belonging throughout that time to particular sub-divisions (corporate land-holding groups) of the tribe. Clusters of burials, representing the occupants of the houses, were located in the shell dump immediately behind the houses.

Contract-supported work in Western Canada included the following projects: C. E. Borden, University of British Columbia, prepared a final report on an extensive archaeological sequence recovered from the Fraser Canyon; J. Cybulski, University of Toronto,

analyzed a large sample of human skeletal remains from the Tsimshian area of British Columbia; Howard Savage, Royal Ontario Museum, prepared a comparative collection of mammal and avian skeletal remains from the north coast of British Columbia and analyzed archaeological faunal remains recovered previously from this region; Bjorn Simonsen, University of Victoria, conducted an archaeological survey and excavated sites in the Hecate Strait-Milbank Sound area of British Columbia, which yielded valuable information on the direction and temporal placement of exchange of cultural traits between the northern and central coast tribes; and David Wyatt, Brown University, conducted archaeological excavations in the Nicola Valley of British Columbia, aimed at clarifying cultural differences between the Athabaskan and the Interior Salish-speaking peoples known to have inhabited the Nicola Valley in the past.

Archaeological Work in Northern Canada.—J. V. Wright excavated a Shield Archaic component of the AL-7 site on Aberdeen Lake, District of Keewatin in the Northwest Territories. Excavations were oriented toward testing the hypothesis that this assemblage originated in the Northwest Territories and occupied the areas to the east as they were released by the retreating Laurentide ice sheet.

W. N. Irving salvaged a late prehistoric single-component Athabaskan site on the Forty Mile River near Dawson in Yukon Territory and undertook a survey of the New Dempster Highway into the Blackstone area where remains of an abandoned village were located. Two large hearths were discovered and artifacts collected. Work was done with an informant who provided ethnohistoric information on the late prehistoric settlement patterns, the annual cycle of the Kutchin Indians and major population movements during the early nineteenth century.

D. W. Clark investigated an obsidian source reported by natives on the Koyukuk River, which resulted in the location of 30 sites and flaking places probably related to the latter part of the northern Archaic traditions as defined by Anderson for Onion Portage on the Kobuk River. Also found in these sites were fragments of two fluted points apparently related to other fluted or "Clovis" point finds in northern Alaska. A site reconnaissance of part of the Mackenzie River system and Colville Lake was carried out and in the latter area small blow-out sites were located which related to the Arctic Small Tool tradition.

R. J. McGhee undertook archaeological survey and excavation along the Beaufort Sea coast in the vicinity of Tuktoyaktuk in the Northwest Territories. A deeply stratified site was excavated in the abandoned Mackenzie Eskimo whaling station of Kittegazuit, tracing the white-whale hunting specialization of these people for several centuries into the past. The first Arctic Small Tool tradition site to be found in the Mackenzie delta area was located at Point Atkinson.

Contract-supported work in Northern Canada included the following projects: J. Cinq-Mars, University of Wisconsin, surveyed for archaeological sites on the Upper Porcupine River, continuing research begun in northern Yukon Territory by W. N. Irving; A. P. McCartney, University of Wisconsin, excavated a Thule Eskimo village at Silumiut and surveyed for sites in adjacent areas, the main emphasis being placed on the recovery of archaeological material with which to define a regional variant of Thule culture in the seventeenth century; J. F. V. Millar, University of Calgary, conducted salvage operations in the vicinity of Fisherman's Lake in the Northwest Territories, an area containing sites of great interest because of their stratigraphy and remarkably old C-14 dates; and W. C. Noble, McMaster University, conducted an archaeological survey in the vicinities of Great Bear Lake and Great Slave Lake in the Northwest Territories.

Radiocarbon Program.—By the end of 1969, 47 radiocarbon samples received from staff and contractors had been processed and catalogued; 39 samples were submitted to laboratories for dating during 1969 and results were received on 48 samples dated during 1968 and 1969. Descriptions of these were prepared for publication in *Radiocarbon*. Descriptions of samples dated by the Geological Survey of Canada were edited for publication in *Geological Survey of Canada Radiocarbon Dates X*.

Section 5.—Climate and Time Zones*

Subsection 1.—Climate

Just as there are great differences in the weather throughout Canada at any given instant, there are also many climates. These climates are similar to those in Europe and Asia extending from the Arctic down to the mid-northern hemispheric latitudes. Because Canada is situated in the northern half of the hemisphere, most of the country loses more heat annually than it receives from the sun. The general atmospheric circulation compensates for this and at the same time produces a general movement of air from west to east. Migrant low pressure areas move across the country in this "westerly zone", producing storms and bad weather. In intervals between storms there prevails the fair weather associated with high pressure areas.

Although the movement of migrant high and low pressure systems within the zone of the westerlies is the most significant climatic control over Canada, the physical geography of North America contributes greatly to the climate. On the West Coast, the western Cordillera limits mild air from the Pacific to a narrow band along the coast, while the prairies to the east of the mountains are dry and have extreme temperatures because they are shielded from the Pacific Ocean and are in the interior of a large land mass. In addition, the prairies are part of a wide north-south corridor open to rapid air flow from either north or south which often brings sudden and drastic weather changes to this interior area. On the other hand, the large water surfaces of Eastern Canada produce a considerable modification to the climate. In southwestern Ontario winters are milder with more snow, and in summer the cooling effect of the lakes is well illustrated by the number of resorts along their shores. On the East Coast, the Atlantic Ocean has considerable effect on the immediate coastal area where temperatures are modified and conditions made more humid when the winds blow inland from the ocean.

The following table gives temperature and precipitation data for typical stations in the various regions of Canada. Temperatures in this table refer to observations taken in a thermometer shelter which has been placed in a representative location with the thermometer bulbs four feet above the surface of the ground. Mean January and July temperature data are based on records over the 30-year period from 1931 to 1960 except for far northern stations where the available period of record is shorter. After an average temperature is obtained for each day in January over a 30-year period, the mean January temperature may be arrived at by striking a mean of these 930 daily values. The mean July temperatures may be obtained in a similar manner. The highest and lowest temperatures on record refer to the absolute extremes for the entire period of record at each station. Average dates are shown for the last occurrence in spring of a temperature of 32°F or lower and for the first occurrence in autumn of freezing temperatures at the four-foot level in the thermometer shelter.

The official Canadian rain gauge is a small cylinder in which the rain is caught and then measured to one hundredth of an inch with a simple measuring device. Freshly fallen snow is measured as it lies on the ground and recorded to the tenth of an inch. Total precipitation values as shown in the table are the sum of the total rainfall and one tenth of the total snowfall. For the purposes of this table, a day with precipitation is one on which at least one hundredth of an inch of rain or one tenth of an inch of snow has fallen.

* Subsections 1 and 2 of this Section were prepared by the Canadian Meteorological Service, Toronto. A comprehensive study on The Climate of Canada, also prepared by the Meteorological Service, was carried in the 1959 Year Book, pp. 23-51. Supplementing that textual material, detailed tabulations of climatic factors for 45 individual meteorological stations across the country were carried in the 1960 Year Book, pp. 33-77. A reprint is available from the above source giving the complete textual and tabular data. A special article on The Climate of the Canadian Arctic appears in the 1967 Year Book at pp. 55-74, an augmented reprint of which is also available from the Meteorological Service.

¹ Total rainfall and one tenth of the total snowfall.

Subsection 2.—Canadian Meteorological Service

The Canadian Meteorological Service, which reports to the Deputy Minister of Transport, provides meteorological services designed to meet civil requirements throughout Canada consistent with government responsibility and assigned resources. These services are largely organized and provided on a regional basis with offices located at Vancouver, Edmonton, Winnipeg, Toronto, Montreal and Moncton. Each region operates several categories of offices with assigned levels of responsibility for the provision of weather services. Main weather offices are located at major centres across Canada. Each serves an area about the size of a large province, providing weather services to the general public and

additional specialized services to groups and agencies concerned with aviation, water resources, forestry, agriculture, road and rail transportation, construction and marine activities.

Because weather services are designed to meet the special needs of each group, they are as varied as the functions of the consumers. In general, they fall into about three categories. First, current data representing the latest observations of the local weather taken at official observing sites across the country are made available and meet many of the needs of both the public and the economy. Hourly readings of temperature, humidity, cloud cover, precipitation and wind speed and direction are of interest to some, are of concern to others and, at times, are vital to such activities as aviation, flood forecasting, shipping, snow removal and recreation. Daily values of temperature extremes and precipitation amounts are likewise of use to others.

Secondly, short-range and medium-range forecasts are provided for certain areas and for specific locations, such as aerodromes, canals, fruit and vegetable growing areas and large urban centres. The forecasts for the general public are issued by the main weather offices and are distributed across Canada by relay to the radio and TV stations and to the press, and by commercial communication channels.

A third service has to do with technical applications using historical and statistical weather data. All observed weather data are processed and stored to provide a historical record of the Canadian climate. These data are analyzed, quality-controlled and published in a variety of forms and may be applied to the special problems of agriculture, forestry, water resources, and other areas of Canadian activity. Advisory services are available at most weather offices so that each inquirer may receive the information needed in the form best suited to his needs; services of meteorological specialists are available at Toronto Headquarters and at some weather offices. Special analytical projects are occasionally undertaken requiring computer analysis of archived data at Meteorological Service Headquarters in Toronto to provide advice to industry, science and government. Although forecasts are issued only at the main weather offices, secondary weather offices staffed by trained presentation technicians are supplied with sufficient information via the meteorological communication network to enable them to meet a wide range of localized inquiry. Requests for services at a number of secondary offices are such that a professional meteorologist is on staff to provide consultation-type service.

There are now 11 main weather offices and 35 secondary weather offices in the Canadian Meteorological Service system. In addition, local meteorological services are available from Canadian Forces Weather Offices at Department of National Defence bases across the country by means of co-operative arrangements with the Ministry of Transport.

A developing trend in the organization of meteorological services is the establishment of a Scientific Support Services group within Regional Meteorological Offices, which is capable of examining in detail meteorological influences on the activities of major sectors of the economy and of developing specialized services that might be required, taking into account the geographical and topographical features of the area concerned. For example, in British Columbia, mutually beneficial co-ordination and co-operation have resulted in arrangements between provincial authorities and the Regional Office in Vancouver for programs of considerable provincial importance, including the establishment of rain and snow gauge networks for hydrology studies, support for the Columbia River control system, provision of forest fire danger and slash-burning forecasts, and the provision of a frost-warning service for the fruit growing areas of the interior.

Weather Observing Stations.—Several networks of weather observing stations provide the information that forms the basis for the forecasts and advisory service and for the climatological and technical services referred to above. In January 1970, official meteorological observations were taken and recorded at 2,336 weather reporting stations in Canada. There are several classes of stations, ranging from 207 first order reporting stations, mainly at aerodromes, where hourly observations of all aspects of the weather are

recorded, to the 2,000 co-operative observing stations where volunteer observers make daily observations of rainfall, snowfall and temperature. Although there are vast areas of the country where the weather observing stations are several hundred miles apart, the weather in the settled parts of the country is recorded hourly at first order reporting stations every 100 miles or so and daily at co-operative climatological stations about 25 miles apart.

Some first order weather stations do not report hourly but make complete weather observations every six hours. All hourly and six-hourly reports prepared in a special number code are relayed almost instantaneously by the meteorological communications network to all weather offices across the country and are dispatched at high speed to other countries requiring Canadian observations. At the end of the month, all weather observing stations send their official observation report forms to a regional collection office, from which they are sent to Meteorological Service Headquarters for final quality control, processing and publication. These data become part of the climatological archives and serve as a permanent record of Canadian weather. The observing personnel at most of these stations are Ministry of Transport employees and Canadian Forces personnel, and the remainder are employed by agencies or are individuals working under contract with the Ministry or through a co-operative arrangement by which various transportation and communication companies take observations in return for special services.

Twice daily, at over 30 locations throughout the country, upper air observations are made from ground level to altitudes up to 100,000 feet. Pressure, temperature and humidity measurements are made automatically by radiosonde instruments carried aloft by balloons and this information is relayed by a system of radio signals to ground receiving stations. The wind directions and speeds aloft are determined by measuring the drift of the balloon and attached radiosonde instruments using radar or radio direction equipment. The upper air observations, like those of the surface weather, are distributed rapidly to weather offices, and at the end of the month summary report forms are sent to Meteorological Service Headquarters where the data are quality-controlled, processed, published and archived.

There are more than 2,000 climatological observing stations in Canada where observers record the precipitation and temperature extremes and send their climatological reports on monthly data sheets to Regional Data Collection Centres and then to Headquarters. Most of the observers serve on a voluntary basis and willingly spend several hours a month on this useful hobby. In addition, many governmental and industrial organizations have incorporated brief climatological duties into the general work program of selected employees. The number of weather observing stations has been growing at an average rate of more than 100 a year for the past decade, and thus a steadily increasing historical record of Canadian weather is available to assist Canadians in all economic pursuits. These data are frequently used in investigations of agricultural potential and irrigation, hydro-electric, industrial and other problems of a wide variety.

Meteorological Communications.—The meteorological communications system is the lifeline that provides the flow of information essential to a reliable weather information service. Since weather conditions are constantly changing, the value of reports of weather observations falls off rapidly and the time between the taking of the observation and its relay to the public or use in a forecast must be kept as short as possible. For a country the size of Canada with many sparsely settled areas, rapid communication presents difficult problems and requires unique solutions.

Weather offices and weather stations are linked coast-to-coast by land-line teletype and, in remote northern areas, by radio or radio teletype. The land-line teletype circuits are leased from commercial wire companies and operated by the Meteorological Service; most of the radio circuits are operated by the Telecommunications and Electronics Branch of the Ministry of Transport. When conversion to computer operation of the entire system is completed (in 1970), relay of all weather data will be controlled by a centrally located computer in Toronto.

In addition to the foregoing, two long-line weather facsimile networks transmit information in the form of weather charts, from central forecast offices to weather offices from coast to coast and into the northern and ocean areas by radio facsimile. Icebreakers and other ships equipped with receivers thus have the latest weather charts regularly available for guidance in their operations.

The Meteorological Service operates 57,100 miles of teletype circuit serving 382 stations with 741 facility connections, and the meteorological facsimile system serves 101 stations equipped with 132 connections and uses 18,400 miles of network circuits.

Specialized Services.—Although weather services are organized on a regional basis, certain specialized services can be most economically provided from a central location. Such a service is the ice reconnaissance and forecasting program to support marine activity in ice-congested waters; the program is directed from Toronto and the Ice Forecast Centre is located in Halifax. Specially equipped aircraft are used in the aerial phase of the program and ice charts can be passed from the aircraft directly to icebreakers via radio facsimile. Other phases of the program are the provision of valuable supplemental data from ship-board ice observers assigned to eight Canadian Coast Guard icebreakers, and the operation of 120 ice reporting shore stations and 60 weekly reporting stations where ice thickness is measured. Forecast ice charts are also dispatched via facsimile circuits and mailed to a wide variety of personnel and organizations having need of this information.

Providing another specialized service, the Climatology Division at Meteorological Service Headquarters in Toronto, using the unique capabilities of a computer and large banks of weather data which have been quality-controlled and stored so that they are available for rapid access by computer, is able to provide statistical material of a highly sophisticated nature. These computer-produced climatological data allow the full range of relevant historic weather information to be applied to an increasingly wide variety of problems in which human, economic and physical activities and their weather-sensitive factors are being examined. In addition, hydrometeorological specialists are responsible for meteorological studies in support of water resources activities involving the rivers, reservoirs and lakes of Canada. Such studies include the provision of criteria for the proper design and operation of water-control structures, techniques for use in lake level, river flow and flood forecasting, and assistance in water supply and pollution investigations.

The scientific and technical orientation of modern life have evolved, in part, because people are unwilling to accept the apparent vagaries of weather—the unexpected occurrence of frost, flood, blizzard and storms at sea—without applying scientific and technical knowledge toward an understanding of the weather as a major environmental influence. People wish to be forewarned so that precautions can be taken and hardships mitigated. They are able to establish and successfully operate warning and protective procedures employing emergency systems and backup facilities, and to direct or adjust operations to save life and protect property from high wind, extreme cold, frost, flood and storm.

Research and Development.—The extent to which modern meteorological science can aid in providing better services has been only partially explored. At Meteorological Service Headquarters in Toronto, research and development work is a continuing activity with changing priorities as a constant search is made for better forecasting techniques and for improvements in the day-to-day meteorological services. Current research in this field is discussed in some detail in Chapter VIII on Scientific and Industrial Research.

World Meteorology.—Canada has always co-operated with other nations in the exchange of weather data and other important matters relating to international meteorology. A major area of international co-operation is with the United States Weather Bureau which is now a part of Environmental Science Services Administration (ESSA). The two national meteorological organizations exchange data freely. Co-operative arrangements are also made for the use by Canada of data processed by the large ESSA computer facilities in Washington. Other agreements cover the marine forecasting program on the

Great Lakes relating to standardization of methods of ship observations, criteria for issuing weather warnings and other similar matters. Especially noteworthy is the long-standing joint Canadian-United States venture begun in 1947, operating five high Arctic weather stations at Resolute, Eureka, Mould Bay, Isachsen and Alert; the latter is the most northerly inhabited station in the world. In addition to their primary function of taking and recording surface and upper air weather observations, these stations are of great importance as advance bases for arctic scientific studies, polar explorations, and economic activities such as oil exploration.

The air that circles the earth is an international resource. Research studies of the atmosphere and the prediction of weather elements require global surface and upper air observation networks, the international exchange of data via modern high-speed communications links, and the broadscale processing of data by computers.

World meteorology is highly organized on a global basis through the World Meteorological Organization (WMO) with headquarters in Geneva and a participating membership of 132 states and territories. Canada is an active member of this world organization and fully supports its many goals. A major portion of the WMO technical program is now devoted to the World Weather Watch (WWW)—a worldwide plan for upgrading and modernizing meteorological observing networks and national weather services.

The unprecedented opportunities afforded by the development of earth-orbiting meteorological satellites and the availability of high-speed electronic computers are being examined in depth and both developed and developing countries are co-operating fully so that all member states of the WMO will derive full benefits from modern technology and, in turn, will have improved meteorological services.

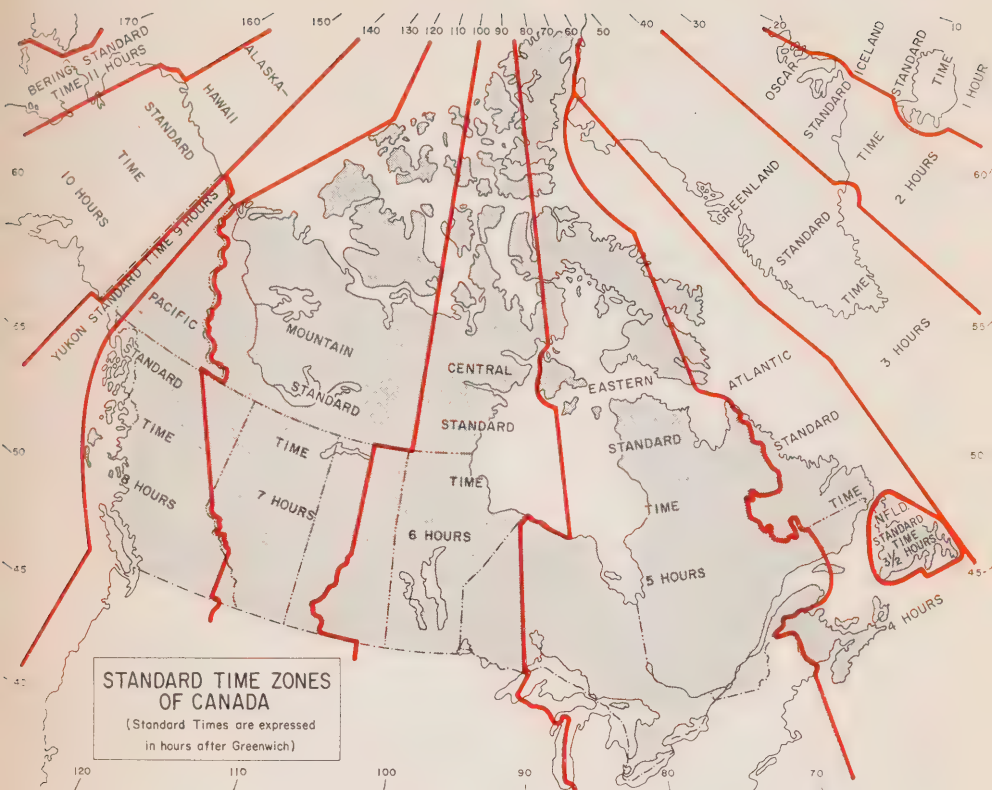

Subsection 3.—Standard Time and Time Zones

The rotation of the earth on its axis was considered at one time to be entirely uniform and the unit of time, which is the second, was defined as $1/86400$ of the mean solar day. Improvements in clocks and in the methods of making astronomical observations demonstrated conclusively that there are irregularities in earth rotation too large to be neglected. So, in 1957 the International Committee on Weights and Measures defined the second in terms of the annual motion of the earth about the sun, called ephemeris time. Also in 1957 the first caesium atomic clock was calibrated with respect to ephemeris time, but not until 1968 was the caesium second adopted as the international standard. The second today is defined as 9,192,631,770 cycles of a transition of the caesium atom.

Atomic timekeepers, with a precision of a millionth of a second a day, control Canada's time service. The same is true of CHU (3330 kHz, 7335 kHz, 14670 kHz), the continuous broadcast of Canadian time which contains a bilingual voice announcement of time each minute.

Standard Time, which was adopted at a World Conference held at Washington, D.C., in 1884, sets the number of time zones in the world at 24, each zone ideally extending over one twenty-fourth of the surface of the earth and including all the territory between two meridians 15° of longitude apart. In practice, the zone boundaries are quite irregular for geographic and political reasons. Universal Time (UT) is the time of the zone centred on the zero meridian through Greenwich. Each of the other time zones is a definite number of hours ahead of or behind UT to a total of 12 hours, at which limit the international date line runs roughly north-south through the mid-Pacific.

Canada has seven time zones, the most easterly being Newfoundland Standard Time, three hours and thirty minutes behind UT and the most westerly Yukon (west) Standard Time, nine hours behind UT. In between, from east to west, the remaining zones are called Atlantic, Eastern, Central, Mountain, Pacific and Yukon (east). Yukon (east) and Pacific Standard in effect constitute a single zone.

Legal Authority for the Time Zones.—Time in Canada has been considered a matter of provincial rather than federal jurisdiction. Each of the provinces and the North-west Territories has enacted laws governing the standard time to be used within its boundaries. These laws determine the location of the time zone boundaries. Lines of communication, however, have sometimes caused communities near the boundary of a time zone to adopt the time of the adjacent zone, and in most cases these changes are acknowledged by amendments to provincial legislation. During the two World Wars, there were federal enactments concerning time but these were of temporary duration. In 1941 the Dominion Observatory time was declared the time to be used for official purposes in Canada.

Daylight Saving Time.—Although Daylight Saving Time had been urged in many quarters before World War I, its first use in Canada came as a federal war measure in 1918. Today most of the provinces have legislation controlling the provincial or municipal adoption (or rejection) of Daylight Saving Time; in the other provinces the authority is left to the municipalities. By general agreement, Daylight Saving is in force for six months from the last Sunday in April to the last Sunday in October.

Section 6.—Public Lands

Subsection 1.—Federal and Provincial Public Lands

The total area of Canada and the areas of the individual provinces and territories are classified by tenure in Table 9. All lands, with the exception of those privately owned or in process of alienation, are Crown lands under the jurisdiction of either the federal or the provincial governments. In the table, items 2, 3, 4 and 5 are obtained from Federal Government sources and items 1, 6, 7 and 8 from provincial government sources.

9.—Total Area classified by Tenure (circa) 1969

Item	Nfld.	P.E.I.	N.S.	N.B.	Que.	Ont.
	sq. miles	sq. miles	sq. miles	sq. miles	sq. miles	sq. miles

8. Provincial forests.....	5,415	119,948	9,267	80,378	—	222,687
Totals.....	251,000	251,700	255,285	366,255	1,511,979	3,851,809

¹ Includes leased land, which is, however, a minor portion of the total. ² Includes Gatineau Park (137.5 sq. miles) and Quebec Battlefields Park (0.36 sq. mile) which are under federal jurisdiction but are not technically national parks. ³ Less than one square mile. ⁴ Included in item 6. ⁵ Includes 952,849 sq. miles set aside by Order in Council as native game preserves in which only Indians and Eskimos may hunt, but which are not regarded as national parks. ⁶ Includes that part of Wood Buffalo Park in Alberta (13,650 sq. miles).

⁷ That part of Wood Buffalo Park in N.W.T.

Federal Public Lands.—Public lands under the administration of the Federal Government comprise lands in the Northwest Territories including the Arctic Archipelago and the islands in Hudson Strait, Hudson Bay and James Bay, lands in Yukon Territory, ordnance and admiralty lands, national parks and national historic parks and sites, forest experiment stations, experimental farms, Indian reserves and, in general, all public lands held by the several departments of the Federal Government for various purposes connected with federal administration (see Table 9). These lands are administered under the Territorial Lands Act (RSC 1952, c. 263) and the Public Lands Grants Act (RSC 1952, c. 224) which became effective June 1, 1950 and replaced previous legislation.

The largest areas under federal jurisdiction are in the Northwest Territories and Yukon Territory where only 93 sq. miles of a total area of 1,511,979 sq. miles are privately owned. This part of the national domain, with the exception of the islands in Hudson Bay and James Bay, is all north of the 60th parallel of latitude and occupies about 40 p.c. of the surface of Canada. It is under the administration of the Department of Indian Affairs and Northern Development.*

Provincial Public Lands.—Public lands of Nova Scotia, New Brunswick, Quebec, Ontario and British Columbia (except the Railway Belt and Peace River Block) have been administered since Confederation by the provincial governments. In 1930 the Federal Government transferred the unalienated portions of the natural resources of Manitoba, Saskatchewan and Alberta and of sections of British Columbia to the respective governments, and all unalienated lands in the Province of Newfoundland, except those administered by the Federal Government, became provincial public lands under the Terms of Union on Mar. 31, 1949. All land in the Province of Prince Edward Island has been alienated except 133 sq. miles under federal or provincial administration.

Information regarding provincial public lands may be obtained from the respective provinces. (See the Directory of Sources of Official Information, Chapter XXVII, under "Lands and Land Settlement".)

Subsection 2.—National Parks

Canada's national parks are the result of the Federal Government's efforts to preserve natural areas of outstanding scenic and biological interest for the benefit of the public. The national park concept, which began with the establishment of Yellowstone National Park in the United States in 1872, was soon afterwards applied in Canada. In 1885, the Canadian Government reserved from private ownership the hot mineral springs of Sulphur Mountain in what is now Banff National Park. Two years later, this 10-sq.-mile reserve was extended to 200 sq. miles and named Rocky Mountains Park, the first federal park in Canada. In the same year, Queen Victoria Niagara Falls Park, the first provincial park, was established by the Ontario Government to protect the public's right to view the great natural wonder of Niagara Falls. Two land reserves in southern British Columbia—Yoho and Glacier—were made by the Federal Government in 1886, a reserve of 54 sq. miles in the Waterton Lakes area of southern Alberta in 1895, and an area of 5,000 sq. miles around Jasper, Alberta, in 1907. These four reserves, all in the western mountain ranges, together with Rocky Mountains Park, formed the nucleus of the national park system after the Dominion Forest Reserves and Parks Act was passed by Parliament in May 1911. Concurrently, a distinct National Parks Branch was created in the Federal Government to protect, administer and develop the parks.

By 1930, nine more national parks had been established. Three of these were in Ontario and consisted of federally owned Crown land or land held in trust for Indians. One in Saskatchewan and one in Manitoba were former federal forest reserves. Wood Buffalo National Park, a 17,300-sq.-mile area straddling the Alberta–Northwest Territories border, was established as a refuge for the largest surviving herd of wood buffalo in North America. Elk Island National Park near Edmonton was also established as a preserve for buffalo, and Mount Revelstoke and Kootenay National Parks, scenic areas in southern British Columbia, were established by agreement between the Federal and British Columbia Governments.

The parks added to the system since 1930 were set up with the co-operation of provincial governments which made lands available for national park purposes. All public lands suitable for national parks are now under the administration of provincial and territorial

* Transfer of all lands around northern municipalities from federal to territorial control was begun in September 1970. See Appendix I.

governments and a new national park usually is established by Act of Parliament after the land for it has been acquired by the provincial government and transferred, together with all its natural resources, to the Federal Government.

National parks are now under the jurisdiction of the Minister of Indian Affairs and Northern Development and are administered by the National and Historic Parks Branch under the National Parks Act, 1930 (RSC 1952, c. 189) and various park regulations. The purposes of the parks and the objectives of their management are set out in the Act, which declares that parks are for the people of Canada for their "benefit, education and enjoyment" and that they are to be maintained and used so as to leave them unimpaired for the enjoyment of future generations.

An important step in the evolution of national park administration was taken when all national parks were reviewed, amended and consolidated in a statement approved by the federal Government and announced in the House of Commons in 1966. The main points of this policy statement, which will guide administrative decisions for planning and development, are:—

- (1) National parks are established to preserve for all time the most outstanding and unique natural features of Canada for the benefit, education and enjoyment of Canadians as part of their natural heritage. They are dedicated forever to one use—to serve as sanctuaries for rest, relaxation and enjoyment. No exploitation of resources for any other purpose is permitted. All development must contribute to public enjoyment and conservation of the parks in a natural condition.
- (2) Development will be used to guide development and to preserve park values. Visitor services will be grouped generally into visitor service centres, a definition that applies to existing town centres.
- (3) National parks cannot meet every recreational need; the most appropriate uses are those involving enjoyment of nature and activities and experiences related to the natural scene.
- (4) The federal Government assumes the cost of administration and protection in the parks and provides basic facilities for public use, such as roads, trails, campgrounds, picnic areas, water supply and utilities. Other facilities beyond basic requirements, such as picnic tables, restaurants, gas stations, stores and other special services, are provided by private enterprise.
- (5) All permanent and businesses should be in the same economic position as those operating outside national parks and this principle governs the approach to charges, rentals and fees. The cost of special services such as swimming pools, marinas, golf courses and fully equipped campgrounds should pay the operation and maintenance costs of these publicly operated facilities. In general, permanent and seasonal residents should be limited to providing basic services to the park community.
- (6) All development affecting public development and the activities of private enterprise must be governed by the national interest as expressed by the National Parks Act.

In addition to the national parks, which preserve natural features, national historic parks and sites commemorate events of national importance and preserve historic landmarks or objects of historic, prehistoric or scientific interest that are of national importance.

Nearly 300 historic parks were created in 1917 and 1918 and, by 1969, more than 300 monuments and some 600 plaques commemorating personages or events had been erected across the country. A list of national historic sites was declared of national historical significance by the Minister of Indian Affairs and Northern Development on the recommendation of the Historic Sites and Monuments Board of Canada, an advisory board whose members represent all provinces. In 1967, a National Historic Sites policy statement was approved by the Board, accepted by the Minister and tabled in the House of Commons for the information of Parliament. One

The Perkins house in Liverpool, N.S., was built in 1762 of white pine in the simple New England style preferred by the early Maritime settlers. ↑

→ An eastward view over the rooftops of the walled core of Quebec City shows that the fine old buildings of that area, some dating back to the 1700s, remain in use and unchanged in appearance since their construction. The buildings on rue d'Auteuil in the foreground are of later vintage, having been constructed about 1845.

← St. Andrews Presbyterian Church in Niagara-on-the-Lake, Upper Canada's oldest community, is a splendid example of Greek revival architecture. It was built in 1831, replacing an earlier church built in 1794.

→ The oldest surviving buildings in Vancouver are relatively modern structures. "The Banff" apartment house was built about 1907 in what is now the central area of the city.

→ Some of the old, solid, Victorian-type brick homes built around the close of the 19th century in Western Canada are worthy of preservation as representative of that stable and prosperous era, as is this home in Indian Head, Sask., which is falling into disrepair.

← This turretted brick house dated about 1900, is one of many once-elegant homes of that era still in use in Winnipeg, as indeed in many other cities, both east and west

HISTORIC BUILDING INVENTORY

An inventory of historic buildings is under way across Canada, initiated in 1970 by the National Historic Sites Service of the Department of Indian Affairs and Northern Development. During the next ten years, the exteriors of 100,000 structures built before 1880 in Eastern Canada and before 1914 in Western and Northern Canada will first be recorded and the interiors and architectural details of 10,000 of them will then be studied. A few thousand will be chosen for full documentation and researchers will delve into old records to determine the building date, architect and original owner of each structure.

The bank of knowledge recorded by this inventory of buildings, which are part of Canada's national heritage and are very often threatened with destruction in the face of urban redevelopment, highway construction or simple neglect, will be invaluable in the forming of public policy concerning historic preservation and the architectural quality of the environment, and will assist government agencies in decisions that must be reached as their communities grow and require change. It will also do much to interest private enterprise and individuals in the restoration and use of worthwhile structures and to generally increase the awareness of Canadians of their very real links with the past.

A fine example of late 18th-century rural Quebec architecture, this farmhouse has thick rubble masonry walls, flared bell-cast roof and corner chimneys like those of medieval France.

of the main points of that policy statement recognized the need for a comprehensive long-range historic sites program, establishing proper thematic and regional priorities.

The national parks and national historic parks and sites are administered by a director, three assistant directors and three regional directors who are responsible for operations in the Western Region, the Central Region (Ontario and Quebec) and the Atlantic Region. Each regional director consults with the representatives of the staff components of the Branch—Financial and Management, Personnel, National Parks Service, National Historic Sites Service, and Program Co-ordination and Property Management. A resident superintendent manages each park and has the assistance of a staff of park wardens who protect the park and its natural features and enforce park regulations; park naturalists who explain the park to visitors and offer various educational services; and other administrative, maintenance, and visitor service personnel.

Each park is being developed to yield the recreational potential for which it is suited. Sightseeing, camping, fishing, hiking, photography and nature study are the most popular forms of recreation common to the 19 parks now accessible to the public. There are campgrounds in each park; daily charges are \$1.50, \$2.00 or \$2.50 a day, depending on the services provided. Motor vehicles may enter parks in the Atlantic Provinces free of charge but an admission fee, varying from 25 cents for a single entry to \$2 for an annual licence good for all parks, is payable on entering all parks in Western Canada and Point Pelee National Park in Ontario; all fees are currently under review but, in line with the government's anti-inflationary policies, no early fee increases are expected. Agreements in principle have been or are about to be reached with provincial governments for the establishment of additional national parks. The long-term aim is to add 40 to 60 new parks to the system by the end of the century.

A rugged area of about 160 sq. miles, heavily wooded and dotted with sparkling lakes, is to be preserved as La Mauricie, Canada's 22nd and Quebec's 2nd national park. It is about 100 miles northeast of Montreal and will be open for its first visitors in late summer of 1971.

10.—Location, Year Established, Area and Characteristics of National Parks and of National Historic Parks and Sites

Park	Location	Year Estab- lished	Area	Characteristics
			sq. miles	
National Parks				
Terra Nova.....	On Bonavista Bay, Newfoundland, 160 miles north of St. John's.	1957	153.0	Maritime area, rocky headlands and forests, salt and freshwater sport fishing. Serviced campground and cabin accommodation.
Prince Edward Island..	North shore of Prince Edward Island.	1937	7.0	Strip 25 miles long on shores of Gulf of St. Lawrence. Recreational area, fine bathing beaches. Accessible by highway. Motel and cabin accommodation. Serviced and semi-serviced campgrounds.
Cape Breton Highlands.	Northern part of Cape Breton Island, N.S.	1936	367.0	Rugged Atlantic coastline with mountainous background. Fine seascapes. Recreational opportunities. Hotel and cabin accommodation. Serviced and semi-serviced campgrounds.
Kejimikujik.....	In south-central Nova Scotia, about 40 miles north of Liverpool and 50 miles southeast of Digby.	1969	147.2	Inland park with many lakes and rivers. Hiking, canoeing, semi-serviced campground, swimming, interpretation program, picnic areas. Park contains historic Micmac Indian petroglyphs (rock carvings). Accessible by highway.
Fundy.....	On Bay of Fundy between Moncton and Saint John in New Brunswick.	1948	79.5	Delightful recreational area. Forested region, wildlife sanctuary, rugged terrain. Cabin accommodation. Serviced and semi-serviced campgrounds. Summer recreation.
Georgian Bay Islands...	In Georgian Bay, near Honey Harbour, Ontario.	1929	5.3	Recreational and camping area. Unusual geological formations on Flowerpot Island. Accessible by boat from nearby mainland points. Serviced and semi-serviced campgrounds on Beausoleil Island. Picnic areas.
Point Pelee.....	On Lake Erie near Leamington in southwestern Ontario.	1918	6.0	Wildlife sanctuary. Remarkable beaches, marsh area, southern flora, nature trail. Staging ground for migratory birds. Accessible by highway. Serviced campground.
St. Lawrence Islands....	In St. Lawrence River between Brockville and Kingston, Ont.	1914	1.2	Mainland area and 14 islands among the Thousand Islands. Recreational and camping area. Accessible by boat from nearby mainland points along provincial highway. Serviced campground.
Riding Mountain.....	Southwestern Manitoba, west of Lake Manitoba.	1929	1,148.0	Wildlife sanctuary on summit of escarpment. Fine lakes. Accessible by highway. Hotel and cabin accommodation. Serviced and semi-serviced campgrounds. Summer recreation. Skiing in winter.
Prince Albert.....	Central Saskatchewan, north of Prince Albert.	1927	1,496.0	Forested region dotted with lakes and interlaced with streams. Summer recreational area. Accessible by highway. Hotel and cabin accommodation. Serviced and semi-serviced campgrounds.
Banff.....	Western Alberta, on east slope of Rockies, 65 miles from Calgary.	1885	2,564.0	Magnificent scenic mountain area; noted resorts, Banff and Lake Louise. Mineral hot springs. Summer and winter sports. Accessible by rail and highway. Hotel and cabin accommodation. Serviced and semi-serviced campgrounds.

10.—Location, Year Established, Area and Characteristics of National Parks and of National Historic Parks and Sites—continued

Park	Location	Year Estab- lished	Area	Characteristics
			sq. miles	
National Parks— concluded				
Elk Island.....	Central Alberta, near Ed- monton.	1913	75.0	Fenced preserve containing large herd of buffalo; also deer, elk and moose. Popu- lar summer recreational area. Acces- sible by highway. Cabin accommoda- tion and serviced campground.
Jasper.....	Western Alberta, on east slope of Rockies, 235 miles from Edmonton.	1907	4,200.0	Mountainous area and noted wildlife sanc- tuary. Majestic peaks, icefields, beauti- fullakes and noted resort, Jasper. Mineral hot springs. Summer and winter sports. Accessible by rail and highway. Hotel and cabin accommodation. Serviced and semi-serviced campgrounds.
Waterton Lakes.....	Southern Alberta, adjoining Glacier Park in Montana, U.S.A.	1895	203.0	Canadian section, Waterton-Glacier Inter- national Peace Park. Mountainous area with spectacular peaks and beautiful lakes. Accessible by highway. Hotel and cabin accommodation. Serviced and semi-serviced campgrounds.
Glacier.....	Southeastern British Co- lumbia on summit of the Selkirk Range.	1886	521.0	Superb alpine region, towering peaks, gla- ciers and forests. Climbing, skiing, camping. Accessible by Trans-Canada Highway and railway. Visitor accom- modation. Semi-serviced campgrounds.
Kootenay.....	Southeastern British Co- lumbia on west slope of Rockies.	1920	543.0	Includes Vermilion-Sinclair section of Banff-Windermere Highway. Broad valleys, deep canyons, mineral hot springs. Hotel and cabin accommoda- tion. Serviced and semi-serviced camp- grounds.
Mount Revelstoke.....	Southeastern British Co- lumbia, on west slope of Selkirks.	1914	100.0	Rolling mountain-top plateau with colour- ful alpine meadows and mountain lakes. Championship ski runs and ski jump in winter. Campgrounds.
Yoho.....	Eastern British Columbia, on west slope of Rockies.	1886	507.0	Lofty peaks, magnificent waterfalls, colour- fullakes. Yoho and Kicking Horse Val- leys. Accessible by rail and highway. Hotel and lodge accommodation. Ser- viced and semi-serviced campgrounds.
Wood Buffalo.....	Partly in Alberta and partly in Northwest Ter- ritories, between Atha- basca and Slave Rivers.	1922	17,300 <i>Alta., 13,650 N.W.T., 3,650</i>	Immense region of forests and open plains. Mainly a wildlife sanctuary. Home of largest remaining herds of plains bison and wood bison on the North American Continent. Accessible from Fort Smith, N.W.T.
National Historic Parks and Sites			acres	
Signal Hill.....	St. John's, Nfld.....	1956	243.2	Site of 1762 battle between French and British and of many fortifications. Mar- coni made first transatlantic wireless transmission here in 1901.
Castle Hill.....	Placentia, Nfld.....	1968	59.1	Ruins of harbour fortifications begun by the French about 1664. Interpretation centre.
Fort Amherst.....	Prince Edward Island, near Rocky Point.	1967	222.0	Remaining earthworks of British fort built after 1758.

Fort Malden.....	Amherstburg, Ont.....	1940	5.0	Site of defence post built in 1797-99. Mu- seums.
Fort St. Joseph.....	St. Joseph's Island near Sault Ste Marie, Ont.	1923	47.0	Most westerly British fort, built in 1796.
Fort Wellington.....	Prescott, Ont.....	1940	8.5	Military garrison 1812-66.
Woodside.....	Kitchener, Ont.....	1954	10.2	Boyhood home of the Rt. Hon. William Lyon Mackenzie King, former Prime Minister of Canada.
Fort Prince of Wales....	Northern Manitoba, near Churchill.	1940	50.0	Ruins of fort built 1733-71 to secure control of Hudson Bay for England.
Lower Fort Garry.....	Manitoba, 20 miles north of Winnipeg.	1951	9.8	Stone-walled fort built by the Hudson's Bay Company between 1831 and 1839.
Batoche Rectory.....	Near Duck Lake, Sask....	1954	7.0	On field of final battle of Northwest Rebel- lion, 1885. Only surviving building of that date.
Fish Creek Memorial Park.	Near Rosthern, Sask.....	¹	39.0	Commemorates Northwest Rebellion of 1885.
Fort Battleford.....	Saskatchewan, four miles south of North Battle- ford.	1951	36.7	North West Mounted Police post built in 1876. Museum.
Fort Langley.....	Fort Langley, B.C.....	1958	11.0	Partially restored trading post founded 1850. Colony of British Columbia pro- claimed here 1858.
Fort Rodd Hill.....	Esquimalt, B.C.....	1962	44.4	Extensive nineteenth century stone and con- crete coastal fortifications.
Palace Grand Theatre..	Dawson, Y.T.....	1959	--	Reconstruction of theatre of Gold Rush days.
S.S. Keno.....	Dawson, Y.T.....	1959	--	Preserved Yukon river-boat.
Yukon Sternwheeler....	Whitehorse, Y.T.....	1959	--	Yukon river-boat of 1930 period.

¹ Not yet formally established.

Evidence of the increasing attraction of Canada's national parks and national historic parks and sites is the growing numbers of visitors as shown in Table 11.

In addition to the national parks described in Table 10, a 138-sq.-mile recreation area known as Gatineau Park has been developed north of the cities of Ottawa and Hull. Although not designated as a national park, this area has been developed by the Federal Government as part of the National Capital Region and is under the care of the National Capital Commission. It is a wilderness area, extending northward from Hull for 35 miles. With 25 miles of parkway, magnificent lookouts, lakes, fishing streams, beaches, picnic areas, camping sites and walking trails, the park is one of the finest recreation areas in Canada and is enjoyed by well over 1,000,000 visitors each year.

¹ Sites for which visitor data are available.

Subsection 3.—Provincial Parks

Most of the provincial governments of Canada have established parks within their boundaries. Some of these, particularly in Quebec and Ontario, are wilderness areas set aside in order that some portions of the country might be retained in their natural state without change brought about by the hand of man. Most of them, however, are smaller areas of exceptional scenic or other interest which are easily accessible and are equipped or slated for future development as recreational parks with camping and picnic facilities. The more important parks in each province are mentioned briefly in the following paragraphs.

Newfoundland.—Altogether, 2,963 sq. miles of wilderness, reservations and parklands in Newfoundland are administered by provincial government agencies. All but 107 sq. miles of that area are in two wilderness reserves designated as protected habitat for caribou and are administered by the Wildlife Division of the Department of Mines, Agriculture and Resources. The 107 sq. miles of developed and reserved public parkland are under the jurisdiction of the Provincial Parks Service of the same Department. Of that area, 65 sq. miles are in 17 undeveloped park reservations and the remaining 42 sq. miles are in 36 provincial parks. Operation of these parks is directed toward the preservation of natural environment and most of them are located in wilderness areas, developed only for picnicking and camping. Regulations prohibit hunting and logging but sport fishing is permitted. Attendance at the parks in 1969 reached a total of 1,192,050, almost 17 p.c. more than in the previous year.

Prince Edward Island.—Twenty areas have been developed as provincial parks including Strathgartney Park, a 40-acre tract of land on the Trans-Canada Highway between Charlottetown and Borden, which is an excellent picnic site and campground with its hardwood groves, fresh spring water and beautiful view over the West River and the surrounding country; Lord Selkirk Park, an area of 30 acres at Eldon, is of historic interest in that it contains an old French cemetery and marks the spot on the shoreline where Lord Selkirk landed; Brudenell River Park and Golf Course, comprising 296 acres at Roseneath, has a considerable area of woodland and runs to the shore of the Brudenell River; Jacques Cartier Park, an area of 18 acres at Kildare Beach four miles from Alberton, is of historic significance as the place where Jacques Cartier first landed on Prince Edward Island; Green Park, 45 acres on the Trout River, is an attractive combination of land, trees and water and is also of interest as a historic shipbuilding centre; Cabot Park at Malpeque, named in honour of the famous explorer, John Cabot, is a 30-acre area with beautiful sandy beaches and an interesting museum; and several small parks have been developed or are under development. A fee of \$3 is charged for serviced tent and trailer sites and of \$2 for unserviced sites. The parks are maintained by the Department of Tourist Development.

Nova Scotia.—A provincial park system is under development in Nova Scotia by the Department of Lands and Forests, which will include a network of picnic parks accessible from major highways for day use and a series of camping parks for overnight visitors. The need is also recognized for acquisition and development of provincial beaches, particularly along the warm waters of Northumberland Strait. The major camping parks in use at the end of 1969 included Whycocomagh Park overlooking Bras d'Or Lake in Cape Breton; Laurie and Porter's Lake Parks near Halifax; Caribou Park on Northumberland Strait; Wentworth Park in the Wentworth Valley; Smiley Park in the Annapolis Valley; Islands Park on the south shore; Mira River Park between Sydney and Louisbourg; Battery Park at St. Peters canal; Valleyview Park overlooking the Annapolis Valley; and Ellenwood Lake Park in the southwest near Yarmouth. Several other camping parks and picnic parks were in process of development.

The policy of the Department is to provide good basic facilities, leaving scope for private enterprise to offer more sophisticated items such as showers, etc. Use of the picnic parks is free but there is a nightly charge of \$1.50 in camping parks. Concessions are not permitted under present policy.

It is visualized that some 20 to 25 additional camping parks, 60 picnic parks and several beach developments will be required in the near future to accommodate the ever-increasing demand for such recreational areas.

Nova Scotia's Five Islands campsite overlooking Minas Basin, Bay of Fundy, is one of many such pleasant spots where one may holiday in the Maritimes.

New Brunswick.—The New Brunswick provincial park system, which is administered by the Department of Natural Resources, includes 19 recreational parks ranging in size from 25 to 1,400 acres, 23 picnic parks, 11 camping parks and six beach parks. Most of the park sites are located in rural areas, fairly evenly distributed throughout the province, and are adjacent to or easily accessible from main trunk roads. All parks contain tables, some form of toilet facility and a potable water supply but more elaborate facilities are available in the larger parks. No entrance fee is charged at any of the sites but a daily camping fee of \$2 to \$2.50 is in effect at 25 of the larger parks. The Department also maintains two wildlife parks—at Magnetic Hill near Moncton and at McGraw Brook on Highway 109—where various species of wildlife to be found in the province are displayed.

In 1969, more than 3,300,000 persons visited the provincial parks, 158,000 of them campers; 75 p.c. of the campers using park sites came from outside the province and about 40 p.c. of the day-use visitors were non-residents.

A five-year federal-provincial (ARDA) program of expansion and improvement of park and campground facilities in the province has been completed; this included the development of approximately 1,000 tent and trailer sites, accommodation for day-use of beaches, forest and wildlife recreation areas, scenic lookouts, etc., land purchase, and provision of special facilities where warranted by intensity of use, such as boats, ramps, docks, canteens and playgrounds.

Quebec.—The Province of Quebec has set aside an exceedingly large proportion of its territory as parks for the purpose of conserving the natural resources and providing areas for open-air recreation. Its major parks extend over almost 75,000 sq. miles, which amounts to about 12 p.c. of the area of the province and, excluding James Bay Park, covers nearly 20 p.c. of the forest area south of the 52nd parallel.

In all, there are 27 major parks, the oldest of which are Mont Tremblant Park dating back to 1894 and Laurentide Park to 1895. Mont Tremblant Park, an area of 990 sq. miles, is located 80 miles north of Montreal and is situated within one of the most extensively used summer and winter recreational areas of the province. The first concern in the establishment of Laurentide Park, an area of 4,059 sq. miles lying 30 miles north of Quebec City, was the conservation of the caribou, then in danger of dying out. Unfortunately, the protection afforded was not sufficient to preserve these animals but they have recently been re-introduced into the park area with more success. Gaspé Park, an area of 498 sq. miles, was established in 1937 also for the purpose of protecting the caribou and there a herd can now be found on Mont Albert. La Vérendrye Park, a 5,257-sq. mile wilderness area 140 miles northwest of Montreal, was created in 1939 as the Mont Laurier-Senneterre Highway Fish and Game Reserve and was renamed in 1950 to honour the illustrious Canadian explorer, Pierre Gaultier de Varennes, sieur de La Vérendrye, who discovered the Rocky Mountains. Mont Orford Park, a smaller area of 15 sq. miles west of Sherbrooke in the Eastern Townships, was established in 1938 and has become a highly specialized regional recreation area, devoted principally to camping.

Since then, more than 20 parks have been created:—

<i>Name and Year Established</i>	<i>Area</i>	<i>Name and Year Established</i>	<i>Area</i>

Matane (1962).....	417		

Perhaps the most popular activity in Quebec parks is fishing. Until very recently, hunting was generally prohibited but since 1962 a controlled moose hunt, authorized as a wildlife-management technique, has been permitted for Quebec residents only in Laurentide, La Vérendrye, Shickshocks, Matane, Portneuf, St. Maurice, Upper St. Maurice Valley and Pontiac Parks. Hunting is also permitted in Rimouski Park under certain conditions.

A number of rivers have been set aside by the Quebec Government as fishing reserves for public use, particularly for salmon fishing. These include the St. Jean, Petite Cascadé, Matapédia, Ste. Anne, Cap Chat and Matane Rivers in the Gaspé area, the Moisie and Laval Rivers along the north shore of the St. Lawrence, and the Petit Saguenay, a tributary of the Saguenay River.

The Parks Branch of the Department of Tourism, Fish and Game has recently added to the number of campsites in the province to meet the growing popularity of that form of recreation, supplementing the network of privately operated sites. In the eastern portion of the province, provincial campsites are located at Cap Bon Ami, Carleton, Port Daniel, Moisie, Mont St. Pierre, Percé and Trois Pistoles. Camping areas closer to Quebec City include St. Alexandre (Kamouraska), Montmagny, St. Jean (Île d'Orléans), Stoneham, Villeneuve, Vincennes (Beaumont), St. Camille (Bellechasse) and St. Joseph de Beauce. Those in the general area of Montreal are Mont Orford, des Voltigeurs (Drummondville), Waterloo, Côte Ste. Catherine, Paul Sauvé (Oka), Dollard des Ormeaux, and Pointe des Cascades.

A recent innovation in a number of parks has been the marking of trails and the setting up of other facilities for the use of snowmobile enthusiasts, enabling them to enjoy in safety the natural beauty of the surroundings. During the 1969-70 winter season, such facilities were provided at Rimouski, Laurentide, Chibougamau, St. Maurice, Mont Tremblant and Dollard des Ormeaux Parks and at Paul Sauvé Park at Oka and Darwin Falls at Rawdon.

Ontario.—In 1969 there were 97 provincial parks available for public use in Ontario and several new parks were in process of development; 78 other areas, comprising 1,937 sq. miles, were held in reserve for future development. The total area of the Ontario provincial park system was about 15,030 sq. miles.

The seven largest parks—Polar Bear, Algonquin, Quetico, Lake Superior, Missinaibi, Killarney and Sibley—together have an area of about 12,724 sq. miles. Polar Bear Park is the largest in the system, occupying 7,000 sq. miles of Hudson Bay Lowland bordering Hudson and James Bays containing boreal forest, tundra and arctic flora and fauna. Algonquin Park is a beautiful area 2,910 sq. miles in extent, 180 miles north of Toronto and 105 miles west of Ottawa; it has 14 picnic and camping areas which are accessible by car from Highway 60 and offers particularly fine canoeing opportunities in its interior. Killarney Park is accessible by Highway 637 from Highway 69 south of Sudbury. Quetico Park, covering 1,750 sq. miles, is accessible by Highway 11 at the Dawson Trail Campground on French Lake and also by water by way of Basswood Lake in the south. Highway 17 north from Sault Ste Marie gives access to Lake Superior Park, and Sibley Park may be reached by road from Highway 17 east from Thunder Bay. Missinaibi Park, 176 sq. miles in extent, surrounds Missinaibi Lake, 55 miles north of Chapleau. The lake is renowned for walleye fishing and is the site of an important Hudson Bay trading post.

In 1967 a new policy of park classification and parkland zoning was announced to achieve a balanced park system and to establish a framework for positive and effective development and management. Five park classes were established—primitive, natural environment or heritage, wild river, nature reserve, and recreation. Comparable zones within parks were also established—primitive, natural, historic, multiple use, and recreation.

Under the Wilderness Areas Act, which came into effect in 1959, 40 areas are now established. These areas, widely distributed across the province, vary in size, character and significance, but all were established as being important for their historic, scientific, aesthetic or cultural values. The largest is a 938-sq.-mile block covering the Pukaskwa area on the north shore of Lake Superior. Most other wilderness areas are one square mile or less in size.

With the establishment of the class of provincial parks known as nature reserves, some areas that once were protected under the Wilderness Areas Act for their scientific values are being changed in law to be protected as nature reserves under the Provincial Parks Act. There are now six areas so protected, four of which were previously under the Wilderness Areas Act. All nature reserves will contain natural features and phenomena that are either unique or typical of the primitive or contemporary landscapes which together form the ecological mosaic of Ontario.

Ontario has made another advance in meeting the rising pressures for recreational space by applying the concept of the recreational reserve. The recently created North Georgian Bay Recreational Reserve covers 4,500 sq. miles of interesting country lying generally between Algoma and Parry Sound on the north shore of Georgian Bay and including the channel between Manitoulin Island and the mainland, the 30,000 Islands, the famous route of the voyageurs by way of the French River, the remaining shoreline of Lake Nipissing and the La Cloche Mountains. The Reserve is not a provincial park nor is it a Wilderness Area but an area following a normal course of development which is already used extensively for recreation. The plan is, by guiding the evolution of the area, to realize its full potential as a recreational paradise serving all types of needs and co-existing with a landscape of normal activity.

A new beach and camping area has recently been added to Killarney Park, which is situated on the northern shore of Georgian Bay south of Sudbury, and is one of Ontario's largest parks.

Ontario's vast lakeland areas make this province a vacation paradise and the number of park visitors increases year by year. Attendance in 1969 was 10,459,936 persons and campers numbered 1,360,639. The charge for vehicle entry in 1969 was \$1 a day or \$10 a year, and the camping charge was \$2.50 a night which included vehicle entry. Picnic tables, fireplaces, fuelwood, tested drinking water and washrooms are provided at supervised tent and trailer campgrounds. Trailer sanitation stations are new additions in many parks. Campsites numbered approximately 18,039 in 1969.

Interpretative and naturalist programs are being continually expanded and such services as museums, outdoor exhibits, conducted trips, illustrated talks and labelled nature trails are available in many parks.

The parklands of Ontario are administered by the Parks Branch of the Department of Lands and Forests. Detailed information is contained in various brochures available on request from the Department of Lands and Forests, Parliament Buildings, Toronto.

Manitoba.—The provincial parks system of Manitoba, administered by the Parks Branch of the Department of Tourism and Recreation, consists of four major classifications of outdoor recreation development: provincial parks, which are large area parks with a variety of natural attractions suited to outdoor activities; recreation areas, the natural attractions of which are modified to accommodate recreation activities of an intensive nature; waysides, which are located on most highways to enhance travel routes and provide attractive rest stops; and heritage areas, which are areas of outstanding scenic beauty or have natural, physical or historic features of special local interest.

There are ten provincial parks in Manitoba, six of which are well established, three Centennial parks are under development and Hecla Island Provincial Park is in the planning stages. Birds Hill Provincial Park comprises 8,400 acres and an 80-acre man-made lake within easy reach of the Manitoba capital. In south-central Manitoba, Spruce Woods Provincial Park is set in an area thriving with wildlife, woods and wildflowers along the valley of the Assiniboine River, and also features lookouts over the shifting sand dunes of the Bald Head Hills, the province's only truly desert area. Near the western boundary of the province, Assinippi Provincial Park is under development. It centres on the southern end of a 45-mile-long man-made lake now forming behind the Shellmouth Dam on the Assiniboine. The Shellmouth reservoir will provide for development of water-based facilities on a large scale for western Manitoba residents and visitors.

Hecla Island Provincial Park is the most recent addition to the parks system. This park includes a group of islands of which Hecla is the largest and adds over 7,300 acres of land and 140,000 acres of water area in the southern section of Lake Winnipeg. Grindstone Point, adjacent to Hecla Island Provincial Park, is also being developed as a recreation area in conjunction with the park. Hecla Island is at present connected to the mainland and Highway 8 with a regular ferry service, although it is planned to eventually replace the ferry with a causeway. Park developments will offer resort facilities for water sports, hiking, snowmobiling, hunting and fishing and will include a marina and an interpretive centre. Hecla village is a historic Icelandic fishing site.

Manitoba provincial parks have a total area of about 3,200 sq. miles. In addition, there are 41 recreation areas ranging in size from four to 2,364 acres, and more than 90 roadside facilities. The park system contains 51 campgrounds. Hunting and fishing lodges are common and accommodation in some of the parks ranges from modern resorts and motels to hotels and cabins. Golf, tennis, boating, swimming, fishing, riding and hiking facilities are available, as well as children's playgrounds. A major ski area and mazes of snowmobile trails provide for growing participation in winter outdoor activities. Over 100 commercial concessions operate within the parks system, offering a variety of services ranging from restaurants to riding stables and marinas.

Rehabilitation and expansion of existing recreation areas are continuing in an effort to provide new camping and improved day-use facilities. Development is continuing, too, in the heritage-area program to preserve and interpret sites, large and small, illustrating the natural and human history of the province. Surveys have been conducted to study potentials along the shorelines of Lake Winnipeg and Lake Manitoba and provide guidance for future development of recreational facilities in Manitoba's interlake area.

Popularity of the Manitoba provincial parks and recreation areas is indicated by impressive annual increases in the number of park visitors. In the three years ended Mar. 31, 1970, the numbers were estimated at 1,871,000, 1,776,000 and 2,420,000, respectively. An estimated 69,700 families and groups in tents, trailers and truck campers utilized campground facilities across the province in the 1969-70 fiscal year, an increase of 15,500 over the previous year. The admission fee to Manitoba's provincial parks is 50 cents a day or \$3 for the season.

Saskatchewan.—Saskatchewan's 14 provincial parks, comprising 1,803 sq. miles of recreation land, range from forested parklands in the midst of the sprawling prairie to valley parks between the soft hillsides of the legendary Qu'Appelle and rugged northland settings. Each park offers camping, picnicking, boating and swimming facilities and a variety of recreational activities. Eleven of the parks operate a supervised recreation program of regularly scheduled activities for all ages—arts and crafts, hikes along park nature trails, social functions and numerous team sports. Moose Mountain boasts a dignified split-fieldstone chalet and other modern cabin accommodation. Modern cabin facilities are also found at Cypress Hills, Duck Mountain and Greenwater Parks. Golf courses are found at Cypress Hills, Moose Mountain and Duck Mountain Parks. In Cypress Hills Park, with its unique forest cover of stately lodgepole pine and white spruce,

are found elk, antelope, deer, beaver, sharp-tailed grouse and quiet trout-stocked streams. In Duck Mountain, Moose Mountain and Greenwater Parks, moose, elk and bear appear variously and deer and beaver are common to all, as are several varieties of grouse and many species of waterfowl and smaller land birds. Pike, pickerel and perch abound in almost all park lakes and brook and rainbow trout are ardently sought in northern waters. Canoe routes and commercially operated fishing and hunting camps are found in the province's three wilderness parks—La Ronge, Nipawin and Meadow Lake. Hundreds of roadside camp and picnic grounds are in operation. Four official campsites and several other camping areas dot the province's 406-mile stretch of Trans-Canada Highway. Here, campers and picnickers relax in picturesque settings, contrasting the flat prairie highway. Saskatchewan operates 72 regional parks which, although designed primarily with local patrons in mind, also attract large numbers of tourists.

Marked sites of historic interest number 143 and include the Touchwood Hills Hudson's Bay Post, Cannington Manor and Wood Mountain Historic Parks.

Alberta.—The Province of Alberta has 46 provincial parks containing 199 sq. miles; 42, with a total area of approximately 172 sq. miles, are in use and continuing development. Cypress Hills Provincial Park with an area of 78 sq. miles is the largest and is situated in the southeast portion of the province. Other parks are: Aspen Beach, Beauvais Lake, Big Hill Springs, Big Knife, Bow Valley, Bragg Creek, Chain Lakes, Crimson Lake, Cross Lake, Dillberry Lake, Dinosaur, Entrance, Garner Lake, Gooseberry Lake, Gregoire Lake, Hommy, Jarvis Bay, Kinbrook Island, Lac Cardinal, Lesser Slave Lake, Little Bow, Little Fish Lake, Moose Lake, O'Brien, Park Lake, Pembina River, Pigeon Lake, Red Lodge, Rochon Sands, Saskatoon Island, Sir Winston Churchill, Taber, Thunder Lake, The Vermilion, Tillebrook Trans-Canada Campsite, Wabamun Lake, Williamson, Willow Creek, Winagami Lake, Woolford and Writing-On-Stone. These parks are generally provided with picnic, camping and playground facilities and are maintained by the Department of Lands and Forests, Provincial Parks Division, primarily for the recreation and enjoyment of residents and visitors. There is a park within easy reach of almost every town. The most northerly park is Gregoire Lake, about 20 miles south of Fort McMurray and the southernmost park is Writing-On-Stone which adjoins the Alberta-Montana border. Alberta's provincial parks were visited by 4,385,130 tourists and vacationists between Apr. 1 and Nov. 30, 1969.

In addition to the recreational parks, 25 sites have been established to mark and preserve locations of historical interest. They include: Athabasca Landing, Buckingham House, Bugnet Plantation, Coronation Boundary Marker, Early Man Site, Fort DeL'Isle, Fort George, Fort Vermilion, Fort Victoria, Fort White Earth, Frog Lake Massacre, Grizzly Bear Telegraph Station, Hay Lakes Telegraph Station, Head-Smashed-In Buffalo Jump, Massacre Butte, Ribstones, Rocky Mountain House Fort, Standoff, Stephansson, Twelve Foot Davis, Shaw Woolen Mill, Rev. George McDougall's Death Site, McLeod Fort, Indian Stone Pile, St. Joseph Industrial School and Old Women's Buffalo Jump.

Provided also for Albertans are the Willmore Wilderness Provincial Park which adjoins Jasper National Park in the north and extends along the British Columbia border, and two wilderness areas established under the Forest Reserves Act in 1961. Willmore Wilderness Provincial Park has an area of 2,149 sq. miles, Siffleur Wilderness 159 sq. miles and White Goat Wilderness 489 sq. miles. The Ghost River Wilderness area of 59 sq. miles was established under the Provincial Parks Act in 1967. The wilderness areas have been set aside to preserve as far as possible the natural scene and are neither subject to any development nor provided with roads. The wilderness areas are complemented by three natural areas established during 1968-69 in representative zones of the province—Kootenay Plains Natural Area in the mountain region (13 sq. miles), Foothills Natural Area (160 acres), and Parkland Natural Area (159.2 acres).

British Columbia.—There are 275 (175 developed) provincial parks in British Columbia, having a total area of about 10,120 sq. miles. These parks are classified as A, B and C. Class A parks are intended to preserve outstanding natural, scenic and historic features of the province for public recreation; they have a high degree of legislative protection against exploitation and alienation. Class B parks are also primarily for the protection of natural attractions but other resource use may be permitted if it does not unduly impair recreational values. Class C parks are intended primarily for the use of local residents and are usually managed by local park boards. Nature Conservancy Areas in any park are fully protected from resource development and are dedicated to a variety of recreational uses. There are immense wilderness areas such as Tweedsmuir Park and Wells Gray Park and outstanding scenic and mountain reserves such as Garibaldi, Mount Robson, Manning and Bowron Lake Parks. The formal gardens of Peace Arch

The quiet waters of British Columbia's Bowron Lake Park in their magnificent Rocky Mountain setting are unexcelled for the enjoyment of a tranquil holiday in the open.

Park are a monument to the goodwill between Canada and the United States. Vancouver Island has a chain of small forested parks that have achieved tremendous popularity with tourists; the best known are Little Qualicum Falls, Miracle Beach and Goldstream. The famous gold town of Barkerville has been restored and became the first Provincial Historic Park; Fort Steele in the East Kootenay area is also being restored to preserve another of British Columbia's pioneer settlements. Twelve marine parks with mooring facilities and campsites have been developed on the islands of the Strait of Georgia for the benefit of water-borne vacationers.

The popularity of British Columbia's parks, with their integrated campsites and picnic areas, is attested by the fact that about 7,024,000 park visits were recorded during 1969; about 25 p.c. of the visitors were campers and the remainder day visitors. Records show that Mount Seymour, Cultus Lake and Golden Ears Parks were the most widely used.

Subsection 4.—Ottawa, Canada's National Capital*

Canada's Capital, the City of Ottawa, lies in a magnificent natural setting, its hub on a high limestone bluff on the south shore of the Ottawa River below the Chaudière Falls at a point where two major tributaries flow in—the placid Rideau from the south and the turbulent Gatineau from the north. Looking northward, the Gatineau Hills form a background for the towers of the modern city which, to the south, east and west, spreads out over rolling land, once heavily forested. There is little record of native settlement in this area. The native tribes of the Ottawa Valley, the Algonkin people, were nomads and were not given to building communities, but the river itself at this point was well travelled by Indian bands. Champlain paused here on his way westward in 1613, calling the river “la grande rivière des Algonnequins”, and early English traders called it the Grand River. “Ottawa” is the anglicized form of Outaouac or Outaouais, the name of a tribe of Indians from Lake Huron who traded with the French in the seventeenth century. They carried their furs by this river and it became widely used by explorers, fur-traders and missionaries, and later by lumbermen and settlers.

The first settlement in the area was started by Philemon Wright who, in 1800, came from Woburn near Boston in Massachusetts with a few families and tradesmen and established a small thriving self-sufficient community on the north shore of the river in what is now Hull. Taking advantage of Britain's need for squared timber, Wright ran the first raft of white pine to Quebec in 1806, fortuitously meeting England's need for an alternative source of timber when Napoléon closed the Baltic timber trade, and thus started a great industry that remained the life-blood of the community for half a century.

Settlement on the south side of the river did not begin in earnest until a generation later. The War of 1812 drew attention to the vulnerability of the line of communications along the St. Lawrence River linking Quebec City with the settlements in Upper Canada and to the need for a secure alternative route. After many delays, a route to Kingston by way of the Ottawa River and the Rideau and Catarqui River systems was approved and in 1826 Lieutenant-Colonel John By of the Royal Engineers was sent to the Chaudière area to build a canal from that point to Kingston. The next year two companies of Royal Sappers and Miners and a labour force, mainly Irish, of several thousand men began the construction. To Colonel By also goes the credit of planning the original townsite which was, in 1827, named Bytown in his honour. Where Ottawa's central area is today, the Earl of Dalhousie, the then Governor-in-Chief, had wisely secured commanding ground for the Crown in 1823 and, adjacent to this, Colonel By laid out two settlements called Upper Town and Lower Town, separated by part of the Crown lands called Barrack Hill. The canal was completed in 1832 and Bytown began to grow and prosper. Stores, factories, banks, churches and schools appeared and steamboats plied the river and canal. A newspaper, the *Bytown Gazette*, was started in 1836.

* Revised by the Public Relations Division, National Capital Commission, Ottawa.

Bytown was now the inland centre of the squared timber trade and by 1850 could boast of some fine stone buildings, among them the home of Thomas MacKay which today forms the central part of the residence of the Governor General of Canada. A change then occurred in the timber industry, the British system of preferential import duties on squared white and red pine logs was abandoned and trade began to decline. However, by this time the accessible forest stands of the eastern United States were depleted and sawn lumber was needed to house a growing population. Also, the American railway and canal network had extended to the Canadian border, making transportation easy. Encouraged by these favourable conditions and the newly recognized availability of hydro-electric power, a group of American and other lumbermen came to Bytown, beginning in 1853, and established sawmills by the Chaudière Falls. Soon the islands about the falls and the flats on both shores were covered with lumber piles and loaded barges were on their way to the American market. The sawmill industry began its rise to dominating importance.

At the beginning of 1855, Bytown became a city and took the name Ottawa, just in time to receive a great honour and to assume a great responsibility. The United Province of Canada, since its formation in 1841, had shuttled its capital between Kingston, Toronto, Montreal and Quebec and was now trying to agree on a permanent site. At the end of 1857, Queen Victoria settled the dispute by choosing Ottawa. Government buildings for the new capital were designed and contracts were let in 1859 for their construction. However, the task was hard and the cost much greater than expected and it was not until 1866 that the government of the Province of Canada actually moved to Ottawa. The next year the first Parliament of the new Dominion of Canada met in an incomplete Parliament Building, situated on the former Barrack Hill.

The nation enjoyed a brief prosperity during most of the next decade. Ottawa grew and the government expanded as the Dominion extended its authority over more and more of British North America. In 1871, shortly after Confederation, the city had a population of about 22,000. Many fine homes and stores in stone and brick were built. The Departmental Buildings, flanking the Parliament Building on the Hill, were enlarged. An old wooden City Hall near the Canal was replaced in 1876 by a fine stone building and a large post office was erected at the city's centre. By the end of the nineteenth century, Ottawa was a flourishing industrial centre with a population of 59,000. It remained the hub of the lumbering industry of Eastern Canada, had the largest paper mills in the country and the leading match factory in the world. However, little effort had been made to preserve or enhance its natural beauty until the Ottawa Improvement Commission was set up in 1899 and the Driveway along the Rideau Canal was begun. Even so, progress was slow in this direction, but in the years up to the beginning of the First World War the city centre began to take on a new face. Many new government buildings were erected—laboratories, the Dominion Observatory and the Geodetic Building at the Experimental Farm, the Archives Building, the Victoria Memorial Museum, the Royal Canadian Mint and the Connaught Building. In 1912, the Grand Trunk Railway completed construction of the Union Station and of the French renaissance-style Chateau Laurier whose turrets continue to grace the Ottawa skyline. During this period several studies were made and plans recommended for the improvement of the national capital but these were deferred because of the War and for other reasons. Fire destroyed the Parliament Building in 1916, leaving standing only the octagonal library now forming part of the magnificent building of neo-Gothic architecture which replaced it. The city beautification program was continued by the Ottawa Improvement Commission until 1927 when it was replaced by the Federal District Commission.

The City of Ottawa today has a population of over 300,000. It is a self-governing municipality, administered by an elected City Council, but there are underlying differences which set it apart from all other major Canadian centres. Historically, it has always been the meeting place for the two founding peoples. It is the national seat of Govern-

ment and throughout the years the federal authorities have recognized the need of creating in and around the national capital an area of pride, not only for the residents of the city and its environs but for all Canadians.

The first concrete step in the redevelopment of the Capital area took place in 1951 with the acceptance by Parliament of a comprehensive master plan (the Gréber Plan) recommending solutions to many of the problems impeding the growth of the region, and the National Capital Commission, successor to the Federal District Commission, was formed in 1959 to carry out the recommendations. Its role in planning for and assisting in the development of the National Capital Region was to acquire and develop property, construct and maintain roads, bridges, parks and other public works, and to undertake joint projects with municipalities, construct and operate concessions, make grants for various purposes and maintain historic buildings.

The National Capital Region today encompasses an area of 1,800 sq. miles—half in the Province of Ontario and half in the Province of Quebec. There are 72 municipalities within the region and although the Commission has no autonomy over these communities, it co-operates closely with them, sharing financially in many municipal undertakings that are of benefit to the region and providing planning advice upon request.

The major recommendations of the Gréber Plan, which were projected over a long period and included the creation of large open spaces within the area, the restoration of the shores of the waterways, the construction of landscaped driveways and parks and the removal of railway trackage from the central sections, have been completed and the emphasis is now on over-all development with the objective of bringing about conditions of balanced social and economic growth among all parts of the Region. This trend is being followed at the municipal level with the formation of regional governments in both the Ontario and Quebec sections. In particular, the Commission has acquired property in the business district of Hull to be reserved for the siting of future Federal Government buildings and for other major works. At the same time, although vitally involved in the future, the Commission has not lost sight of the past. Historic sites are being marked and an inventory compiled of all buildings and sites of historical or architectural significance.

The Commission is a Crown corporation headed by a Chairman and reporting to Parliament through the Minister of Regional Economic Expansion. It is made up of 20 members representing the 10 Canadian provinces and the Northwest Territories. Depending on the season, it employs between 600 and 800 people.

Section 7.—Wildlife Resources and Conservation*

Wildlife is an important renewable natural resource. The original inhabitants of what is now Canada depended on it for food and clothing and still do in some remote areas. The coming of the Europeans brought development of the fur trade which guided the course taken in exploring and settling the land as we know it today. When the country was being opened up, a number of mammals and birds became seriously depleted or extinct. The passenger pigeon, the great auk and the Labrador duck became extinct; bison vanished from the prairies; wapiti, prong-horn antelope and muskoxen were reduced to fractions of their former numbers. As settlement progressed, wildlife habitat was reduced by cutting and burning of forests, pollution of streams, industrial and urban development, drainage of wetlands, building of dams, and other changes in the land.

Today, the arctic and alpine tundra, a major vegetational region, has begun to show serious man-made changes. The adjacent subarctic and subalpine non-commercial forests have been affected principally by increased human travel which causes more forest fires, although the great forests farther south retain much of their original character, despite exploitation. Cultivable lands, originally forest or grassland, have completely changed, but they have, in many cases, become more suitable than the original wilderness for some

* The 1968 Year Book contains a special article on "Animal Life in Canada Today", prepared by scientists of the Zoology Division, National Museums of Canada, under the direction of E. L. Bousfield, Chief Zoologist.

forms of wildlife. Moose, deer, ruffed grouse and coyotes still thrive, probably in greater numbers than in Indian days. Fur species, such as beaver and muskrat, are easily managed, and many small mammals and birds do better in fields and woodlots than in virgin forests, provided that they are not poisoned by pesticides. The harvestable surplus of game and fur species across Canada is seldom fully utilized and wildlife will remain generally abundant where habitat is preserved and management enlightened.

Today, Canada is known for its varied and abundant wildlife. It maintains most, or all, of the world's stocks of woodland caribou, mountain sheep, wolves, grizzly bear and wolverines. These animals exist because of the vast habitat and because of the efforts that have been made to preserve them.

In 1885, the Rocky Mountain Park (now Banff National Park) was established in Alberta, preserving an area of over 2,500 sq. miles in its natural state; in 1887, the Continent's first bird sanctuary was established at Last Mountain Lake in Saskatchewan; in 1893, when wood bison faced extinction, laws were passed to protect them; and in 1907, a nucleus herd of plains bison was established at Wainwright in Alberta. These were among early attempts at wildlife conservation in Canada.

For a long time, certain species were protected from man and predator. Now, having a better understanding of how nature works, it is recognized that many factors combined cause fluctuations in wildlife numbers and hunting seasons and bag limits are based to a greater extent on knowledge of these factors. The science of population dynamics has shown that, contrary to popular ideas about stocking, an area will support only so many animals and highly productive species must have a quick turnover. Wildlife can never be considered apart from environment. Given a fully stocked environment, the annual increase need only replace the losses. Surplus production can therefore be safely taken by predatory animals or, in the case of game species, by man.

As a natural resource, wildlife within each province comes under the jurisdiction of the provincial government.* However, the Federal Government does have responsibility for wildlife on federal land, for research and management of species that have a wide range, and for species that are covered by international treaty, such as the Migratory Birds Treaty between Canada and the United States.

The Canadian Wildlife Service.—The Canadian Wildlife Service was organized in 1947 to meet the need for scientific research in wildlife management, and is now a Branch of the Department of Indian Affairs and Northern Development. The Service conducts scientific research into wildlife problems in the Northwest Territories, Yukon Territory and national parks, advises the agencies concerned with wildlife management and co-operates in carrying out their recommendations. It administers the Migratory Birds Convention Act and co-ordinates and advises on the administration of the Game Export Act in the provinces. The Service also deals with national and international problems relating to wildlife resources and co-operates with agencies in Canada and abroad having similar interests and problems.

The Migratory Birds Convention Act was passed in 1917 to ratify the Migratory Birds Treaty made with the United States of America in 1916. The Canadian Wildlife Service is responsible for recommending the annual revision of the Migratory Birds Regulations which govern open season, bag limits and hunting practices for migratory game birds. Provincial authorities co-operate in administering and enforcing the Act and Regulations and the Royal Canadian Mounted Police enforces them. There are now 96 migratory bird sanctuaries in Canada, with a total area of 45,196 sq. miles.

Bird-banding provides valuable information on the migration of birds and their natural history, and is especially useful in waterfowl management. Leg bands with serial numbers

* The conservation of wild fur-bearing animals in the different provinces is discussed in the Fisheries and Furs Chapter, Part II, and information on provincial conservation of fisheries resources is given in Part I of the same Chapter, together with data relating to the work of the Fisheries Research Board of Canada and to international fisheries conservation (see Index).

are supplied by the United States Bureau of Sport Fisheries and Wildlife for use in Canada, the United States and Central and South America. Duplicate sets of continental banding records are kept in Ottawa.

The latest count of the once seriously declining barren-ground caribou showed an encouraging increase in 1967 to 357,000 animals. A study of herds in the Keewatin District of the Northwest Territories and in northern Manitoba, begun in 1966, has been completed and a report is being prepared. Field observations, post-mortem examinations of nearly 1,000 animals, and laboratory examinations indicated that the general health of the Kaministiquia barren-ground caribou was surprisingly good. However, further investigations are warranted to assess the significance of a number of conditions that were detected.

Reports on wolf-caribou relationships, on Arctic fox and on grizzly bear are being prepared and research is under way on mink, muskrat and beaver. Study of big game mammals in the national parks is continuing, with special attention to mountain sheep and elk in the mountain parks. Ecological studies, particularly of areas where development might disturb wildlife habitat, are being emphasized. In Wood Buffalo National Park, problems of diseases and low reproduction among bison have been investigated and, in New Brunswick, studies of the relationships between forests and wildlife are continuing.

The loss of wetlands to drainage and filling for agricultural and other purposes poses a serious threat to waterfowl. The Service and provincial authorities are co-operating in a major program of preserving wetlands by purchase and long-term lease. A program to preserve important wetlands habitat was started in 1967 and by the end of March 1969 approximately 37,000 acres had been bought for \$2,600,000 and 51,000 acres had been leased at a cost of \$296,000.

Much time has been devoted to species greatly reduced in number or in danger of extinction, such as the Ipswich sparrow, the trumpeter swan and the whooping crane. Six eggs of the whooping crane were taken from Wood Buffalo National Park in 1967 and 10 in 1968 and in 1969 to provide the nucleus of a captive breeding population. Fourteen progeny from these eggs are being reared and the young will be released into the wild when a sufficiently large supply of breeding birds has been developed.

An annual mail questionnaire survey of a sample of waterfowl hunters, based on names of purchasers of the Canada migratory game bird hunting permit, provides estimates of the species and age composition of the major game species. Each year, nearly 400,000 permit holders harvest about 3,000,000 game ducks, other than sea ducks, as well as lesser numbers of many other migratory game birds. Other continuing programs include an annual survey of crop damage in the Prairie Provinces, annual surveys of waterfowl populations and habitat conditions in Western Canada, bird-banding, and participation in a program to reduce bird hazards at airports. Substitutes for lead shot are being studied in order to eliminate the large annual loss of waterfowl from lead poisoning.

Toxic chemicals, such as pesticides and industrial compounds, being released into the environment in ever-increasing quantities may produce immediate or long-term effects on wildlife populations. Pesticide research aims at defining and measuring these effects so that hazards of such compounds may be more clearly understood. Populations of fish, amphibians, small mammals and their mammalian predators, songbirds, raptors, and aquatic birds are under study.

The Canadian Wildlife Service is participating in the Canada Land Inventory of the Department of Regional Economic Expansion. The Canada Land Inventory is a co-ordinated federal-provincial program to gather information on how land in the settled parts of Canada (1,250,000 sq. miles) is being used, and how it could best be used for agriculture, forestry, recreation and wildlife. With the co-operation of provincial biologists and technicians, 16 Canadian Wildlife Service officers are preparing maps showing capability of land to produce and/or support waterfowl and ungulates. (See Chapter X.)

Research in limnology includes productivity of national park waters and the biology of fish and associated fauna. Adequate stocks of fish are maintained through modern methods of management, where they can be applied without detriment to the aesthetic values of the areas concerned.

The Service research staff totals about 70. Specialists covering mammalogy, limnology, migratory bird populations, migratory bird habitat, ARDA programs, pesticides, pathology, interpretation and biometrics are stationed at the head office in Ottawa. Offices are located in Fort Smith and Inuvik, N.W.T.; Whitehorse, Y.T.; Vancouver, B.C.; Edmonton and Calgary, Alta.; Saskatoon, Sask.; Winnipeg, Man.; Ottawa and Aurora, Ont.; Quebec City, Que.; Fredericton and Sackville, N.B.; Halifax, N.S.; and St. John's, Nfld. The Western Region is based in Edmonton and the Eastern Region in Ottawa. A number of university graduates and undergraduates are engaged annually to assist in summer field work; 16 scholarships worth \$1,200 each were awarded in 1969 to graduate students in wildlife and allied fields.

RESOURCE AND ECONOMIC DEVELOPMENT NORTH OF THE 60TH PARALLEL*

As the nation entered the 1970s, Canada's vast territories north of the 60th parallel emerged as the world's newest frontier. The exploration and development of the resources of the Yukon and the Northwest Territories in the latter half of the 1960s focused international attention on the area. These activities demonstrated the tremendous economic potential and the importance to Canadians of identifying themselves more directly with the North.

Man and his new technology has quickly dispelled the myths of the North as an icy, barren and worthless land. Today's North is regarded as Canada's vault, containing uncounted riches in natural resources. This new frontier begins at the 60th parallel, which marks the boundary of the Yukon and Northwest Territories and the provinces of British Columbia, Alberta, Saskatchewan and Manitoba. It is a land of extremes, of great distances, inhabited by only 45,000 people.

The Yukon Territory covers an area of 207,076 sq. miles. Its face is studded with mountain ranges, forested valleys and rushing streams. The Northwest Territories, covering 1,304,903 sq. miles, is a land of great contrasts. To the west lies the Mackenzie region, through which flows one of the world's mightiest rivers, from mountain canyon, down broad valley to the Beaufort Sea. The barren lands of the central region, whence came the legends and myths of the cruel, heartless North, are now being traversed by modern-day explorers searching for information that will expand the inventory of northern resources.

To the east and north is the High Arctic, an incredible expanse of mountain and ice-choked fiord, windswept island and frozen sea that for 400 years has foiled those who have sought a northwest passage to the Far East. Today, as riches are uncovered, as new markets for their products are sought, man is applying his new technology to make the northwest passage a reality.

When the Vikings sailed from Greenland across Davis Strait to Baffin Island, about 1000 A.D., they described it as Helluland—"A Naked Land of Rocks"—and retreated, leaving the wasteland to the native Eskimo. It was not until the fifteenth century that the white man returned to the region, in search of a polar route to Cathay. The first recorded attempt to develop the resource potential of the North was in 1576 when Sir Martin Frobisher discovered what he thought to be gold on Baffin Island. The samples he took back to England turned out to be worthless iron pyrites—fool's gold.

Behind the early explorers came the whalers looking for oil to light the lamps of the world. And behind them were the fur traders, ranging west and north through the Terri-

* Prepared in the Department of Indian Affairs and Northern Development, Ottawa.

ories. In 1670 the Hudson's Bay Company was founded to exploit the region. Later, a rival, the Northwest Company, was formed but in 1821 the great fur trading companies were merged.

The potential mineral wealth that first eluded Frobisher intrigued Samuel Hearne, a Hudson's Bay Company employee, 200 years later. In 1770, he set out from Churchill across the barren lands in search of the northwest passage and the legendary Indian copper mines along the Arctic Coast but found neither. The oil potential of the North was first discovered in 1789 when the explorer Alexander Mackenzie noted oil seepages along the banks of the river that bears his name.

The 1800s were the glorious years for exploration in the North. Sir John Franklin organized two major overland expeditions during the years 1819-22 and 1824-27 before he and his party disappeared while on a naval expedition in the region. From this tragedy emerged the first detailed picture of the northern geography and of the Eskimo people, for in the next decade some 40 well-organized expeditions set out by sea and over land seeking the missing men. As the explorers and fur traders moved across the North there followed in their wake the clergy bringing Christian religion and education to the native people.

Three years after Confederation, Great Britain transferred to Canada her northern territories known as Rupert's Land and North-Western Territory, which, on July 15, 1870, officially became known as the Northwest Territories. The Yukon became a separate Territory in 1898.

As government geological parties moved across the North mapping the area, they were followed by prospectors searching for mineral riches. In 1896 the trail ended at the banks of a stream in an isolated Yukon valley. Gold was discovered in Bonanza Creek and when the word reached the outside world it prompted the most spectacular gold rush ever seen. Tens of thousands of fortune seekers from around the world headed for the Yukon. Some found what they were looking for; most did not. By 1966, when placer mining operations in the area finally ceased, the area had produced more than \$200,000,000 in gold.

Further exploration of the North continued through the 1900s while prospectors, still afflicted by the Yukon gold fever, looked to new areas for exploitation. The arrival of the airplane in the North in the 1920s heralded another golden era as prospectors left their canoes and took to the skies, flown over the great northern expanses by the heroic bush pilots.

In 1932 the first mineral production in the Northwest Territories began on the shores of Great Bear Lake with the establishment of the famous Eldorado radium mine. This mine became a highly strategic operation during the Second World War when its uranium ore was required for the manufacture of the atomic bomb.

In 1934 gold fever struck again in the North, this time in the Yellowknife area. Five gold mines came into production over the next few years, although they were closed when war broke out. However, the war years brought other types of expansion to the Canadian North, expansion generated by such major defence projects as the Alaska Highway cutting across southern Yukon, and the 1,600-mile Canol pipeline built to transport oil from the Norman Wells field on the Mackenzie River to Whitehorse in the Yukon and oil products on to Fairbanks and Skagway in Alaska. At the same time, a chain of airstrips was constructed along the Mackenzie. Another chain of airfields, running northeast to Southampton Island and Frobisher Bay on Baffin Island, known as the Crimson staging route, was used to ferry aircraft and materiel to Greenland and Europe.

Military preparedness in the 1950s generated one of the largest construction projects undertaken in the North—the establishment by Canada and the United States of the Distant Early Warning (DEW) Line of radar stations strung across the Arctic. Early in the same decade the Eskimo was discovered by the art world. The innate talent of many of the Eskimo people to carve in stone was developed and the reputation of Eskimo carvings, prints and other crafts produced by Eskimo men and women quickly became world renowned. Today the production of arts and crafts contributes more than \$1,000,000 a year to Eskimo people and the northern economy.

In 1957, North Rankin Nickel Mines on the Hudson Bay coast came into production and was the first northern mine to make extensive use of native labour. The first Eskimo co-operative in the Northwest Territories was incorporated in late 1959 and its success as a marketing and purchasing medium for the native population was such that there are now more than 20 co-operatives in the North, engaged in many activities such as commercial fishing, logging, housing, retail store operations, municipal service contracts, trapping and fur products, boat-building and handicrafts. These co-operatives contribute a great deal to the progress of the Eskimo toward assuming a greater role of responsibility in the development of the North.

During the 1960s there has been an accelerated expansion of resource and economic development in the Yukon and Northwest Territories. The exploration and development programs, the bringing into production of industrial complexes in both regions, and the attendant development of services have all contributed to the strengthening of the economy of the Canadian North. In 1969, the United States experimental tanker S.S. *Manhattan* undertook a historic journey through the Arctic Archipelago to herald yet another effort by man to establish a northwest passage.

Oil and Gas.—The presence of oil north of the 60th parallel has been known for nearly 200 years, the first seepages having been discovered along the banks of the Mackenzie River near Norman Wells in 1789. In the 1890s similar seepages were discovered along the north shore of Great Slave Lake and near Fort Good Hope on the Mackenzie.

The first producing oil well in the North was brought in by the Northwest Company, a subsidiary of Imperial Oil Limited, at Norman Wells in 1920. Development of the isolated field proceeded slowly until the Second World War when petroleum products were required in Northern Canada and Alaska. Many new wells were drilled in the 1940s and by 1944 gross production totalled 1,220,000 bbl. In order to move the crude, 25,000 men were employed between 1942 and 1944 laying 1,600 miles of products and crude oil pipes and building a maintenance road from Norman Wells to Whitehorse.

The pipeline operation was terminated at the end of the War and since then production at Norman Wells has varied from 1,500 to 2,400 bbl. a day. The Norman Wells field is estimated to contain 419,000,000 bbl. of oil-in-place. The field has produced about 14,000,000 bbl. and the Canadian Petroleum Association estimates 48,000,000 bbl. of additional recoverable oil. The refinery produces gasoline, stove oil, diesel and industrial fuels for the Mackenzie region of the Northwest Territories. Norman Wells produced 860,000 bbl. of oil in 1969.

In the latter half of the 1960s the international search for oil and gas reserves moved into the Canadian North and neighbouring Alaska. The discovery of massive reserves at Prudhoe Bay on the north slope of the Alaska coast in 1967 generated new waves of exploration activity in the Yukon and the Northwest Territories. In the same year the Federal Government entered into a unique partnership with several of Canada's leading oil and mining firms for the development of an oil and gas exploration program in the Arctic Islands, a partnership known as Panarctic Oils Limited. Initially, to launch the program, the Government contributed \$9,000,000 and the companies \$11,000,000. In return for this participation of 45 p.c. in the first stage of the exploration, the Federal Government held 45 p.c. of the common shares and 45 p.c. of the preference shares then issued by the company. In 1970 the Federal Government contributed an additional \$13,500,000 to the Panarctic program, maintaining its 45-p.c. equity position in an expanded program.

Panarctic made its first major gas discovery at Drake Point on Melville Island in 1969. Drilling at this first of two wells at Drake Point went to 8,600 feet before mechanical difficulties forced a halt to operations. In drill stem tests, gas flowed at the rate of 10,000 Mcf. a day from one zone and 13,000 Mcf. from another. In 1969-70 the Panarctic drilling

A Canadian National Telecommunications tower at Parson's Site, 40 miles west of Inuvik.

Canada's northland is a national asset with an almost unbelievable potential, just beginning to be realized. Recent activity in this vast frontier region has brought to light extensive natural resources and, in its wake, modern housing, shopping facilities, planes, schools and libraries are making life in the small and widely separated communities more amenable, and great communication networks and transportation innovations are helping to alleviate their isolation. At the same time, attention is being focused on the imperative need to protect the environment and to assist the native people to take their rightful place in the development of their localities.

Natural resources are of immense importance in the development of the North. Children are given the same opportunities for learning as elsewhere, although their studies are adapted to the environment in which they live and will work.

Unloading supplies by helicopter from a chartered vessel at Resolute, Cornwallis Island.

This 30-ton tracked vehicle meets one of the great challenges of the northern terrain—it can travel through muskeg five to six feet deep.

A hovercraft in use during exploration activities on Herschel Island.

Tuktoyaktuk on the Arctic coast is the northern terminus of the Mackenzie River transportation system where cargo bound for Arctic Island points is transferred from river barges to ocean-going ships during the two-month summer season. About 400 Eskimos and Inuit people live in the community.

Great Slave Lake, N.W.T.*

program moved farther north to Ellef Ringnes Island in the western Arctic Archipelago, approximately 800 miles north of the Arctic Circle, and additional exploration on Melville Island was included in the 1970 schedule.

In that year, 41 companies had signed up for 24 exploration Polarquest projects to be undertaken by Pallister and Associates Ltd., a \$43,000,000 program of geological and geophysical exploration work in the Arctic Islands offered by a group of private consulting firms. On Jan. 14, 1970, Imperial Oil Limited brought in the first Arctic oil well, at Atkinson Point 35 miles northeast of Tuktoyaktuk on the Beaufort Sea. The oil was found when Cretaceous sands at about the 5,700-foot level were drill stem tested. Atkinson Point, on the Mackenzie River delta, is about 400 miles east of Prudhoe Bay.

This discovery, combined with developments at Prudhoe Bay, brought into focus the problem of transportation of oil from the Canadian North and with it the question of the protection of the northern ecology. Eleven companies joined to form Mackenzie Valley Pipe Line Research Limited for the purpose of undertaking a feasibility study on the construction of crude oil and gas pipelines running down the Mackenzie River Valley to connect with existing pipeline systems serving Canadian and United States markets.

Transport of arctic oil by ocean tanker is also under active study. The Humble Oil Company of the United States began field trials in 1969 with the tanker, S.S. *Manhattan*, whose hull was re-designed and strengthened to fight the arctic ice. The *Manhattan* made its way through the Arctic Archipelago but only with the assistance of Canadian ice-breakers. Similar trials were conducted in 1970.

The federal Department of Public Works in 1970 organized studies to examine the feasibility of constructing a major oil port on Herschel Island about 100 miles west of Atkinson Point, which could serve both Alaskan and Canadian oil fields. Other potential port locations in the same general area are being examined.

Oil and gas exploration and development in the Yukon is a fairly recent activity. The first land holdings were acquired in 1952 but active exploration did not begin until 1958. Many Canadian and international oil companies have acquired land in the Yukon and, up to the end of 1969, 33 wells had been drilled in that territory. Activity is centred on four geologically distinct areas—the Liard Plateau, the Peel Plateau, the Eagle Plain and the Arctic Coastal Plain. From geological data gathered to date, it is estimated that about 20,000 sq. miles, or 10 p.c. of the Yukon Territory is considered to be prime oil and gas exploration land. Considerably more drilling will be required before it is known whether this oil and gas potential can be realized. However, two major gas fields, in the area where the borders of the Yukon, the Northwest Territories and British Columbia meet, are being developed. One, the Beaver River pool which straddles the British Columbia-Yukon border, has proven reserves of 1,440,000,000 Mcf. Proven reserves in the Pointed Mountain pool, 25 miles northeast of Beaver River in the Northwest Territories, are 1,510,000,000 Mcf. with proven and probable reserves totalling 2,270,000,000 Mcf. Negotiations for movement of gas from this area to United States markets began in late 1969.

Mines and Minerals.—By 1970, the inventory of the mineral resources north of the 60th parallel had reached impressive proportions. Immense deposits of iron ore, copper, asbestos, lead and zinc have been uncovered throughout the area. Although only a fraction of these resources has been or is in process of being developed, the effect of even this amount of activity on the northern economy has been very dramatic. The total value of mineral production in both Territories in 1970 was estimated at \$175,000,000, an increase of approximately 500 p.c. over the value of 1961 production which stood at \$30,100,000. The intense interest in northern mineral development can be measured by the six-fold increase in the number of claims staked in the Territories—from 5,800 in 1963 to 35,500 in 1969, with a peak in 1968 of 52,000 claims.

The mineral potential of the North was dramatized by the famous Klondike Gold Rush of 1896 but, until recently, the industry has developed only sporadically. The first mineral production in the Northwest Territories did not take place until 1932 when the

Eldorado uranium mine began operating on the shore of Great Bear Lake. The discovery of gold in the Yellowknife area in 1934 generated considerable activity but this ended with the outbreak of the Second World War. Gold mining did resume following the War but it was not until 1964, with the development of the Pine Point lead and zinc mine, that the mining industry in the Northwest Territories began making spectacular gains. In that year, just prior to the Pine Point development, mineral production was valued at \$17,600,000; in the following year it jumped to \$73,700,000.

More recently, the search for minerals in the Northwest Territories has moved farther north. During the period 1966-69, some 60 exploration companies converged on the Coppermine River area, searching for the copper deposits sought by Samuel Hearne two centuries ago. Two firms succeeded in outlining in excess of 4,000,000 tons of ore averaging 3.0 p.c. copper. In 1969, permits covering 15,000,000 acres were issued, largely for uranium exploration in southern and central Keewatin and in southern Baffin Island. Development studies are continuing on the Mary River iron ore deposits found in the northwestern area of Baffin Island in 1963-64. The body is judged to contain approximately 130,000,000 tons of iron ore grading 68.2 p.c. iron, making this one of the world's largest high-grade iron ore discoveries. A nearby lead-zinc prospect, found in 1968 at Strathcona Sound, is also under intensive study, possibly leading to a large mining development.

Major mining developments in the Yukon in the 1960s have enhanced the economy of that Territory. Whereas the value of mineral production in 1961 stood at only \$12,700,000, the 1970 value was expected to reach \$60,000,000. The major reason for this dramatic increase was the bringing into production of an asbestos mine at Clinton Creek in 1968, and of a lead-zinc mine in the Mount Nye area of east-central Yukon in 1969.

In both instances, the development of mining properties has created new communities, new transportation facilities, new job opportunities and new associated industries and businesses in the North.

Water, Forestry, Land.—Water today ranks as the most important renewable natural resource in the Canadian North. Initially it was regarded mainly as a means of transportation and for local supply purposes but later, as industry moved northward and new communities were created, it became valuable as a source of power. Today, as continental supplies of fresh, unpolluted water diminish rapidly under industrialization, Northern Canada water assumes even greater importance.

The Federal Government is currently compiling a detailed inventory of the water resources of both Territories, which are found in three of the main drainage basins of Canada. The map on p. 10 shows the Yukon River and its tributaries, flowing northward into the Bering Sea, as included in the Pacific drainage basin; the Mackenzie River and its tributaries as well as the streams flowing east of the Mackenzie into the Arctic Ocean as dominating the Arctic basin; and the streams flowing eastward into Hudson Bay as part of the Hudson Bay drainage basin. At the same time, studies are being undertaken of hydro-electric power potential throughout the North.

Inventory surveys are also evaluating the forest resources north of the 60th parallel, a reflection of the increased interest in this area being shown by the forest industry. There is an estimated 77,000 sq. miles of productive forest in the Yukon and the Mackenzie District of the Northwest Territories containing an estimated 23,000,000,000 cu. ft. of merchantable timber. Until 1969 utilization of this northern forest resource was confined to local sawmill operations but in that year agreements were signed with four firms to develop forest operations in the Yukon, and in 1970 two forest regions in the Yukon and Northwest Territories were made available for commercial timber harvesting. It is expected that these developments will lead to the export of Territorial wood and wood products.

Because of geographical and other factors, the Territories are not agricultural areas and farming on a successful full-time basis has limited possibilities. Land utilization opportunities are confined primarily to industrial and urban expansion, outdoor recreation, trapping, hunting and fishing. The development of tourism as a major industry north of the 60th parallel holds tremendous promise. As one of the world's last frontier regions,

the North has unique attractions—a wide variety of breathtaking scenery, an abundance of wildlife and colourful people. Increasing demand for tourist accommodation and more recreational facilities is providing many opportunities for potential investors. The Federal Government in 1969 established a \$5,000,000 small business loan fund to assist entrepreneurs in both Territories in establishing and expanding such tourist service industries as motels, hotels, restaurants and stores.

In 1970 a move was made toward the establishment of the first national park in the Northwest Territories when the Federal Government set aside for future development a 2,860-sq. mile area on the East Arm of Great Slave Lake on the edge of the Barren Lands.

Transportation and Communications.—The rapid development of the resources of the Territories has brought about a revolution in transportation and communications north of the 60th parallel. Although physical barriers, tremendous distances and extremes of weather are formidable obstacles, man and his technology is establishing efficient systems.

The bush 'planes which carried men and materials during the 1920s and 1930s have been replaced by jet aircraft, making travel into the North now only a matter of hours. The traditional north-south travel links are being complemented by east-west airline routes as the demand for passenger and freight service throughout the Territories grows. Four commercial airlines provide regularly scheduled passenger and freight service through the Territories. Fares and freight rates are from 20 to 50 p.c. higher than in Southern Canada and, although the introduction of faster and more efficient equipment on many northern routes is closing the gap, they will probably always remain higher because the maintenance of efficient services in the North is so much more expensive.

Movement of freight by water is still a major form of transportation in the Northwest Territories. Two main systems operate annually—one along the Mackenzie River system and the other a sea lift to the eastern Arctic and the Arctic Islands.

The construction of the Alaska highway through the southern Yukon during the Second World War gave that Territory road access to Southern Canada and to Alaska. It remains the principal highway but from it extends an ever-growing network of roads serving the resource industries. In 1965 the Federal Government initiated a Northern Roads Program which authorizes an annual expenditure of \$10,000,000 for ten years. One major road opened in 1969 was the 129-mile, \$9,300,000 Ross River-Carmacks road servicing the new Anvil Mining Corporation lead-zinc mine, concentrates from which are trucked to Whitehorse. At Carmacks they meet trucks carrying asbestos from Clinton Creek. The containerized loads are moved by rail to tidewater at Skagway in Alaska, 110 miles distant, where they are transferred aboard ship.

In the Northwest Territories the Pine Point mining operation has produced major economic side benefits, one of which is the 435-mile Great Slave Lake railway linking Pine Point to Grimshaw in Alberta. This continental rail system has generated considerable northbound traffic in freight and general merchandise. On the return trip, the trains carrying ore and concentrates from Pine Point also haul agricultural and forest products. New farming areas and new communities have sprung up in far northern Alberta along the rail line. Running parallel to the Great Slave Lake Railway is the 600-mile Mackenzie Highway, connecting Yellowknife with the southern road system. A \$10,700,000 extension of the Mackenzie Highway running 95 miles northwest to Fort Simpson, which was opened in 1970, is the beginning of what may eventually be a permanent highway down the Mackenzie River Valley to the Arctic Coast.

As the transportation network grows, so does the system of the communications serving both Territories. A combination of land lines, microwave and tropospheric scatter systems, and private radio networks bring the most isolated settlements into contact with the outside world. Television is still relatively new, with service at present confined to frontier packages offering four hours of taped broadcast a day at major population centres. However, the forthcoming establishment of a domestic satellite communication system for the whole of Canada is expected to provide vastly improved communication services to all areas north of the 60th parallel.

People.—The human resource is the key to the successful development of all the natural resources north of the 60th parallel. Like the other resources, it has barely been developed. At the 1966 Census, the total population of both Territories was 43,120; by 1970 it had risen to an estimated 48,000, of whom about 30,000 were in the Northwest Territories.

One of the major current challenges is the integration of the native Indian, Eskimo and metis people into the economic life of the Territories. A recent study of the labour force in the Territorial mining industry indicated that the indigenous people comprised only 4.5 p.c. of the total work force, while, according to the 1961 Census, they comprised 45.3 p.c. of the Territorial population. This low rate of participation may be traced to such factors as educational background, labour force requirements and attitudes of the industry involved, social problems and housing, added to which was the movement of the indigenous people within the Territories.

In an effort to correct this problem, the Federal Government in 1969 introduced an Employment Liaison Program designed to find more effective ways of increasing employment opportunities and of bringing together government and industry in the development of practical training programs for native residents. Among the first projects under this program was the establishment of a committee composed of representatives of government and industry to help northern residents find employment in the oil industry.

In addition, the Federal Government is giving financial and other assistance to industries to provide on-the-job training for northern residents; industries, as part of their agreement with the Government in establishing in the Territories, are taking certain numbers of northern residents into their labour forces.

Conservation.—The development of an Arctic oil industry and the attendant risks of pollution from oil spills prompted the Federal Government, in April 1970, to introduce legislation to protect the ecology of the Arctic. The Arctic Waters Pollution Bill was designed to prevent pollution of the areas of the Arctic waters adjacent to the mainland and islands of the Canadian Archipelago. This Bill was accompanied by amendments to the Territorial Sea and Fishing Zones Act, which would extend the limits of Canada's territorial sea to 12 miles from three, and would authorize the Government by Order in Council to create exclusive Canadian fishing zones comprising areas of the sea adjacent to the coasts of Canada. The effect of the Arctic Waters Pollution Bill would be to make clear that the Northwest Passage is to be opened for the passage of shipping to all nations subject to the necessary conditions required to protect the delicate ecological balance of the Canadian Arctic. The Bill itself deals with pollution arising from shipping, from land-based installations, and from commercial activities such as oil drilling carried out on the continental shelf.*

A new Northern Inland Waters Bill* provides for comprehensive management of the freshwater resources north of the 60th parallel. The legislation ensures that the inland waters will forever remain public property, to be used, managed and developed in the interest of the region and the nation as a whole. It provides for the establishment of Territorial Water Boards to grant water licences only on condition that the users accept full responsibility for maintaining or restoring the quality of water to acceptable standards before returning it to the natural environment.

In additional moves to protect the northern ecology, the Federal Government, in May 1970, announced a program designed to reduce or eliminate permanent damage to land north of the 60th parallel. The program included amendments to the Territorial Lands Act and the implementation of Land-Use Regulations which would control and regulate land use by zone.

Under an Arctic Land-Use Research Program (ALUR), funds will be made available to several Canadian universities for studies leading to the detection and definition of environmental problems associated with land-use resulting from northern development. Data gathered in these studies will be used to determine the most effective uses of land in the North. Three land-use research sites were designated for study, in the boreal forest region of the Liard River basin, on Richards Island in the sensitive tundra zone of the Mackenzie delta, and in the precambrian zone between Great Slave Lake and Great Bear Lake.

PART I.—CONSTITUTION OF CANADA

The Canadian federal state, which today comprises ten provinces and two vast northern territories, had its beginning over one hundred years ago in the enactment (Mar. 29, 1867) by the British Parliament of the British North America Act, 1867. Fashioned largely out of the Seventy-two Resolutions drafted at Quebec (1864) by the Fathers of Confederation, the British North America Act, 1867 provided for the federal union of the three British North American provinces (Canada, New Brunswick and Nova Scotia) in one Dominion under the name of "Canada".

* Except where otherwise indicated, the data in this Chapter have been brought up to the date of May 1, 1970. Any important changes that may occur between that date and the date of going to press of the volume will be carried in an Appendix.

Although the new nation that came into being on July 1, 1867 was a federation comprised of four provinces (namely, Ontario, Quebec, New Brunswick and Nova Scotia) Sect. 146 of the Act provided for the admission into the Union of the Crown colonies of Prince Edward Island and Newfoundland on the Atlantic and the united (1866) island and mainland colony of British Columbia on the Pacific, and also of the vast expanse of Hudson's Bay Company territory in the North West known as "Rupert's Land and the North-Western Territory". Following the negotiation of an agreement on terms comprising the Company's surrender of its authority and territories to the Crown (which was to transfer them at once to Canada) and the retention of one twentieth of the land of the fertile belt (the southern territories) with designated blocks of land around its trading posts and a Canadian cash payment of £300,000, the new nation of Canada was ready to expand westward with considerable momentum across the Continent to the Pacific.

The acquisition by Canada of Rupert's Land and the North-Western Territory enabled the Red River settlement, after a few months of disturbance, to receive limited provincial establishment under the name of "Manitoba" in 1870; provided the Federal Government with the public lands needed to help subsidize a transcontinental railway linking the Pacific with the Canadian East, thereby fulfilling the pledge to British Columbia to begin the Canadian Pacific Railway within two years and to complete it within ten years of the date of union, July 20, 1871; and laid, through the provision of millions of acres of public lands, the land and economic bases for the Federal Government's adoption of a free-homestead policy for the Canadian prairies that, in conjunction with the completion of the Canadian Pacific Railway and the launching of other railway lines, brought wave after wave of settlers into the Northwest Territories in such numbers as to justify the creation of the two Provinces of Saskatchewan and Alberta in 1905 out of the portion of the Northwest Territories south of the 60th parallel of north latitude. Although provision for their entry was included in the British North America Act, 1867, the Province of Prince Edward Island held back from the Union until 1873 and Newfoundland became Canada's tenth province on Mar. 31, 1949.

The Constitution of Canada, which had a corporate beginning in 1867, combines, in a set of rules determining the creation and operation of the machinery or institutions of government, the Cabinet system of responsible government (based on an inheritance from Britain) with a Canadian adaptation of federalism (as then practised in the United States for eighty years). A written document, the British North America Act of 1867, contains a substantial portion of Canada's Constitution and this Act, with its various amendments,* is popularly held to be the Canadian Constitution. There is, however, another and perhaps more important part which appears, through the evolutionary processes of historical growth, in various guises including well-established usages and conventions found in the unwritten provisions of the Constitution.

Thus, the British North America Act is not a comprehensive constitutional document presenting an exhaustive statement of fundamental laws and rules by which Canada is governed. The Constitution of Canada in its broadest sense includes other British statutes (such as the Statute of Westminster, 1931) and Orders in Council (notably those admitting various provinces and territories to the federation), Statutes of the Parliament of Canada relating to such matters as the succession to the Throne, the Royal Style and Titles, the Governor General, the Senate, the House of Commons, the creation of courts, the establishment of government departments, the franchise, elections, and also statutes of provincial legislatures relating to provincial constitutional institutions and government matters. Federal and provincial Orders in Council, legally authorized by their respective statutes, provide further constitutional material as do the decisions of the courts which

* See *A Consolidation of The British North America Acts 1867 to 1965*, consolidated by Elmer A. Driedger as of Jan. 1, 1967. Information Canada, Ottawa. 75 cents (Catalogue No. YX1-167).

interpret the British North America Act and all ordinary statutes and indeed possess the power to set aside any laws which they hold to be *ultra vires* or beyond the jurisdiction of the enacting legislative bodies, whether federal or provincial. Moreover, the Canadian Constitution comprises, in addition to the statutory law and its judicial interpretation, substantial sections of the common law, unwritten constitutional usages and conventions and principles of democratic government which were transplanted from Britain over two hundred years ago and since then have been thriving and evolving in the Canadian environment. For example, the Cabinet system of responsible government (see p. 78) and its functioning through close identification of the executive and the legislative powers (that is, of the Cabinet and the House of Commons) is not mentioned in the British North America Act but derives from an unwritten convention of the Constitution.

Although the essential principles of Cabinet government are based in custom or constitutional usage, the federal structure of Canadian government rests on the explicit written provisions of the British North America Act. Apart from the creation of the federal union, the dominant feature of the Act and indeed of the Canadian federation was the distribution of powers between the central or federal government on the one hand and the component provincial governments on the other. In brief, the primary purpose was to grant to the Parliament of Canada legislative jurisdiction over all subjects of general or common interest, while giving to the provincial legislatures jurisdiction over all matters of local or particular interest (see p. 84 and p. 108).

Unlike the written constitutions of many nations, the British North America Act lacks comprehensive "bill of rights" clauses, although it does accord specific constitutional protection to the use of the English and French languages (clause 133) and special safeguards with respect to sectarian or denominational schools. Such vital rights as freedom of speech, freedom of assembly, freedom of religion, freedom of the press, trial by jury and similar liberties enjoyed by the individual citizen are not recorded in the British North America Act but rather depend on the statute law and the common law inheritance. Security of these rights was confirmed by the passage of a Canadian Bill of Rights—An Act for the Recognition and Protection of Human Rights and Fundamental Freedoms (SC 1960, c. 44), assented to Aug. 10, 1960. (See also Chapter IX, Sect. 1 on Canadian Criminal Law and Procedure.)

As mentioned above, the *right to use* either the English or the French language in the House of Commons, the Senate or the federal courts is constitutionally guaranteed by Sect. 133 of the British North America Act. The *use* of the English and French languages in the administration of the Government of Canada is dealt with in the Official Languages Act (SC 1969, c. 54). That Act provides that government notices to the public, certain orders and regulations, and final decisions of federal courts are to be made or issued in both languages and that, in the National Capital Region and in federal bilingual districts, government services are to be available in both languages. The Commissioner of Official Languages for Canada is responsible for ensuring that the Act is complied with.

Amendment of the Constitution.—No provision was made in the British North America Act of 1867 for amendment thereof by any legislative authority in Canada but both the Parliament of Canada and the provincial legislatures were given legislative jurisdiction with respect to some matters relating to government. Thus, for example, the Parliament of Canada was given jurisdiction with respect to the establishment of electoral districts and election laws and the privileges and immunities of Members of the House of Commons and the Senate, and each provincial legislature was empowered to amend the constitution of the province except as regards the office of Lieutenant-Governor. By an amendment to the British North America Act passed in 1949, the authority of the Parliament of Canada to legislate with respect to constitutional matters was considerably enlarged and it may now amend the Constitution of Canada except as regards the legislative authority

of the provinces, the rights and privileges of provincial legislatures or governments, schools, the use of the English or the French language, and the duration of the House of Commons other than in time of real or apprehended war, invasion or insurrection.

The question of devising amendment procedure within Canada which satisfies the need to safeguard or entrench such basic provincial and minority rights as are noted immediately above and yet possesses sufficient flexibility to ensure that the Constitution can be altered to meet changing circumstances is one that still engages the attention of the federal and provincial governments and legislatures. An outline of the constitutional background to the problem, an annotated list of the fourteen occasions since 1867 when amendments to the British North America Act were made by the United Kingdom Parliament, a concise review of the prolonged search for a satisfactory amending procedure in Canada—the subject of repeated consideration in the Parliament of Canada and in a series of formal federal-provincial conferences and meetings in the years 1927, 1935-36, 1950, 1960-61 and 1964—and, more specifically, the text of a draft Bill “to provide for the amendment in Canada of the Constitution of Canada” (accompanied by explanatory notes relating thereto) which embodies the amending procedure or formula unanimously recommended by the Conference of Attorneys-General and unanimously accepted by the Conference of the Prime Minister and the Premiers (October 1964) are all made available in an official publication entitled *The Amendment of the Constitution of Canada*, authorized by the Minister of Justice, February 1965.*

Treaty-Making Powers. †—The Federal Government has exclusive responsibility for the conduct of external affairs as a matter of national policy affecting all Canadians. The policy of the Federal Government in discharging this responsibility is to seek to promote the interest of the entire country and of all Canadians of the various provinces within the over-all framework of the national policy.

In respect of matters of specific concern to the provinces of Canada, it is the policy of the Canadian Government, in a spirit of co-operative federalism, to do its utmost to assist the provinces in achieving the particular aspirations and goals that they wish to attain. The attitude of the Federal Government in this respect was illustrated by the “entente” signed by representatives of Quebec and France in the field of education in February 1965. The Quebec and federal authorities co-operated actively in a procedure that enabled the Province of Quebec, within the framework of the Constitution and the national policy, to participate in international arrangements in a field of particular interest to that province.

Thus, under existing procedures, the position is that, once it is determined that what a province wishes to achieve through agreements in the field of education or in other fields of provincial jurisdiction falls within the framework of Canadian foreign policy, the provinces may discuss detailed arrangements directly with the competent authorities of the country concerned. When a formal international agreement is to be concluded, however, the federal powers relating to the signature of treaties and the conduct of over-all foreign policy must necessarily come into operation.

The approach of the Canadian Government to the question of Canadian representation in international organizations of a social, cultural or humanitarian character reflects the same constructive spirit. It recognizes the desirability of ensuring that the Canadian representation in such organizations and conferences reflects in a fair and balanced way provincial and other interests in these subjects.

¹ The area of Ontario was extended by the Ontario Boundaries Extension Act, 1912 (SC 1912, c. 40).

² Extended by Quebec Boundaries Extension Act, 1912 (SC 1912, c. 45) and diminished Mar. 1, 1927 in consequence of the Award of the Judicial Committee of the British Privy Council whereby approximately 112,000 sq. miles of territory (formerly considered as part of Quebec) was assigned to Newfoundland.

³ Extended by the Extension of Boundaries Act of Manitoba, 1881 and the Manitoba Boundaries Extension Act, 1912 (SC 1912, c. 32).

⁴ Saskatchewan and Alberta created as provinces in 1905 from the area formerly comprised in the provisional districts of Assiniboia, Athabaska, Alberta and Saskatchewan established May 17, 1882 by minute of Canadian Privy Council concurred in by Dominion Parliament and Order in Council, Oct. 2, 1895.

⁵ By an Imperial Order in Council passed on June 23, 1870 pursuant to the Rupert's Land Act, 1868 (Br. Stat. 1868, c. 105), the former territories of the Hudson's Bay Company known as Rupert's Land and the North-Western Territory were transferred to Canada effective July 15, 1870. These territories were designated as the North-West Territories by the Act of SC 1869, c. 3, and as the Northwest Territories by RSC 1906, c. 62. By Imperial Order in Council of July 31, 1880 (effective Sept. 1, 1880), all British territories and possessions in North America not already included within Canada and all islands adjacent thereto (with the exception of the Colony of Newfoundland and its dependencies) were annexed to Canada and these additional territories were formally included in the North-West Territories by SC 1905, c. 27. The Province of Manitoba was formed out of a portion of the territories by the Manitoba Act, 1870 (SC 1870, c. 3) and a further portion was added to Manitoba in 1881 by SC 1881, c. 14. The Provinces of Alberta and Saskatchewan were formed out of portions of the territories in 1905 and in 1912 other portions were added to Manitoba, Ontario and Quebec.

⁶ By SC 1876, c. 21, a separate district to be known as the District of Keewatin was established and provision was made for the local government thereof. The Act was expressed to come into force by proclamation. It provided that portions of the District might be re-annexed to the North-West Territories by proclamation; in 1886 a portion of the District of Keewatin was re-annexed and in 1905 the entire Keewatin District was re-annexed. The Act of 1876 was never proclaimed. By Order in Council of May 8, 1882 the provisional districts of Assiniboia, Saskatchewan, Alberta and Athabaska were created for the convenience of settlers and for postal purposes. By Order in Council of Oct. 2, 1895 the further provisional districts of Ungava, Franklin, Mackenzie and Yukon were created. The boundaries of these provisional districts were re-defined by Order in Council of Dec. 18, 1897. Subsequently the Yukon Territory was formed, the Provinces of Alberta and Saskatchewan were created and other portions of the territories were annexed to Quebec, Ontario and Manitoba. By Order in Council dated Mar. 16, 1918 (effective Jan. 1, 1920) the remaining portions of the Northwest Territories were divided into three provisional districts known as Mackenzie, Keewatin and Franklin.

⁷ The provisional district of Yukon established in 1895 was created a judicial district of the North-West Territories by proclamation issued pursuant to Sect. 51 of the North-West Territories Act (RSC 1886, c. 50) on Aug. 16, 1897 and, by the Yukon Territory Act (SC 1898, c. 6), was declared to be a separate Territory.

PART II.—MACHINERY OF GOVERNMENT

Section 1.—Federal Government*

In any political system there are processes whereby people express their demands to the government; whereby priorities are established among those demands and policies formulated for their implementation; and, finally, whereby the policies are implemented. The institutions, both governmental and non-governmental, through which these processes are carried on vary from country to country and tend to evolve over time, so that in any given country the roles of the institutions in such processes also change over time. This Section describes the institutions of the Government of Canada and their current roles in the fundamental processes of the Canadian political system.

In most countries, the legal framework within which political processes take place is provided through a constitution. The written Constitution of Canada is embodied in the British North America Acts (pp. 65-67). The first of these Acts, passed by the British Parliament in 1867, not only established the institutions through which legislative, executive and judicial powers are exercised in Canada but also established a federal form of government. A central government—the Federal Government—has legislative jurisdiction primarily over matters of national concern and over those matters not otherwise assigned to the provinces. The ten provincial governments are assigned specific areas of legislative jurisdiction, including municipal institutions.

In Canada, there is a fusion of the executive and legislative powers as in Great Britain, but unlike the United States system of separation of such powers. The formal executive power in Canada is vested in The Queen, whose authority is delegated to the Governor General, her representative. The legislative power is vested in the Parliament of Canada which consists of The Queen, an appointive "Upper House" called the Senate and a "Lower House" called the House of Commons, elected by universal adult suffrage. The independence of the judiciary is safeguarded through the constitutional provision that superior court judges are appointed by the Governor in Council and that they hold office during good behaviour and are removable only by the Governor General on address of the Senate and the House of Commons. In other words, judges cannot be removed unless Parliament, the Cabinet and the Governor General agree.

In the Canadian system of government, where the executive is part of Parliament, democratic principles could not be adhered to without the constitutional convention that the Government is responsible to the House of Commons. When the Government loses the confidence of the House of Commons, it must resign or the Prime Minister must request the Governor General to dissolve Parliament and call a general election. Although there are conventions that help in deciding when the Government has lost the confidence of the House, all doubt is removed when the Government is defeated on a motion on which it had explicitly staked its life or when a motion of non-confidence in the Government is passed. If the Government resigns, the Governor General can call on the Leader of the Opposition (who is usually the leader of the political party that has the second largest number of seats in the House of Commons) to form a new Government. If a Government that has lost the confidence of the House of Commons and is granted a dissolution is defeated in the ensuing general election and if no clear majority is elected, the Government has two choices—it can remain in office and seek a vote of confidence of the House of Commons when it meets or it can resign at once. If it resigns, the Governor General will normally ask the leader of another party, usually the one that has won the most seats, to form a new Government. The primary responsibility of the Governor General in either circumstance is to provide the nation with a Government capable of carrying on with the support of the House of Commons.

The Prime Minister and his Cabinet, who with one or two exceptions are members of the House of Commons, are, formally speaking, the Queen's advisers. In fact, there are

* Approved by the Privy Council Office.

virtually no significant actions that can be taken by the Queen, or her representative in Canada, the Governor General, without the advice of the Cabinet. The Prime Minister and his Cabinet determine executive policies and are responsible for them to the House of Commons. The Queen and her representative, the Governor General, have the traditional rights to be consulted, to encourage and to warn the Government.

The demands of Canadian citizens are directed primarily to Members of Parliament, directly to Cabinet Ministers or indirectly to Cabinet Ministers through the Public Service. These demands may originate from individuals, political parties or pressure groups. Alternatively, Members of Parliament, Cabinet Ministers and public servants may take the initiative in suggesting the adoption of policies and programs in the public interest. Although the roles performed by Parliament, the Public Service and the Cabinet cannot be defined with absolute precision, the following stylized description deals with the most obvious and primary roles of each in the Canadian political system.

The determination of public policy rests with the Cabinet but begins generally with the formulation of policy by the individual Ministers. This means, usually, that the public servants under the direction of the Ministers in fact formulate policy proposals which are then submitted, if he agrees, by the Minister concerned to his colleagues in the Cabinet. The Cabinet chooses among the policies submitted and determines which it wishes to implement. The Cabinet may itself formulate policies but, more often, it simply decides from among the alternatives submitted. The establishment of a Cabinet committee system (see p. 79) that operates on a systematic basis and, more especially, the establishment of the Cabinet Committee on Priorities and Planning represent attempts to enhance the capacity of Cabinet in its primary role of policy determination and priority setting.

In conformity with the concept of the rule of law, all executive acts must be authorized by law, and laws are enacted by Parliament. Executive acts may be sanctioned directly by a statute which specifies how a policy is to be implemented, or indirectly by a statute which authorizes the Governor in Council to undertake specific acts. Much of the activity of the Public Service is authorized through the yearly enactment of Appropriation Acts authorizing the expenditure of public funds for specific purposes. As far as the operations of the Government are concerned, Parliament is concerned primarily with the discussion and authorization of policy submitted for its approval by the Government (Ministers). The approval of these policies is accomplished mainly through the enactment of legislation. In an attempt to enhance the capacity of the House of Commons to perform this role, the Government introduced changes in the rules of procedure of the House which were adopted in February 1970 and are included in the Standing Orders of the House of Commons.

The most significant feature of the above processes is that the Government, or Cabinet Ministers, have seats in Parliament and thus share in the exercise of the legislative power. In fact, the majority of legislation enacted by Parliament is submitted by the Government. (It will be remembered that the Constitution provides that all financial measures *must* be introduced by the Government.)

It is the role of the judiciary to apply the laws enacted by Parliament. In the Canadian system of government, Parliament is supreme. This means, among other things, that the judiciary must apply the law as Parliament has enacted it and cannot declare laws to be unconstitutional if they are within the legislative jurisdiction of Parliament or of the legislature that enacted them.

The administration of legislation and of the Government's policies is carried out through a Public Service comprising employees organized (1970) in 25 departments of the Government, some 30 special boards and commissions and 47 Crown corporations or other agencies. Legislation and tradition have combined to develop a Public Service that is non-partisan, the tenure of whose employees is not altered when changes in the Government take place. The only direct relationship between public servants and Parliament is when they are called to appear as witnesses before parliamentary committees. On these occasions, public servants do not, by convention, express opinions on public policy but usually appear as *experts* and to explain existing policy. The public servants who head agencies such as the

Public Service Commission, the Office of the Auditor General, the Office of the Language Commission, the Library of Parliament or the Office of the Chief Electoral Officer, which have a special relationship to Parliament, and who are not subject to direction by the Government on matters of policy, may appear before Parliamentary Committees to explain the policies of their agencies.

The growth in number, variety and complexity of demands placed on the Government requires it not only to adjust its policies in response to these demands but, with increasing frequency, to make significant changes in the organization of the Public Service so that the required policies can be properly implemented. A major reorganization of the Public Service was authorized by the passage of the Government Organization Act (SC 1966, c. 25) and other changes of importance have taken place in the years following. These are described briefly at pp. 138-139.

Subsection 1.—The Executive

The Crown.—The British North America Act of 1867 (Sect. 9) provides that “the Executive Government and authority of and over Canada is . . . vested in the Queen”. The functions of the Crown (that is, the formal executive represented by The Queen), which are substantially the same as those of the Crown in relation to the British Government, are discharged by the Governor General.

The Queen.—The Queen seldom personally discharges the functions of the Crown in respect of Canada except on such occasions as the periodic appointment of the Governor General which is done on the recommendation of the Prime Minister of Canada. On the occasion of a Royal visit, The Queen may participate in those ceremonies that are normally carried out in her name by the Governor General, such as the opening and dissolution of Parliament, the assent to Bills passed by the House of Commons and the Senate, and the granting of a general amnesty.

The Queen is not only Queen of Canada but of several other countries in the Commonwealth. Her Majesty’s title for Canada was approved by Parliament and established by a Royal proclamation on May 28, 1953. The title of The Queen, as far as Canada is concerned, now is:—

Elizabeth the Second, by the Grace of God of the United Kingdom, Canada and Her other Realms and Territories Queen, Head of the Commonwealth, Defender of the Faith.

1.—Sovereigns of Canada since Confederation, 1867

Name	Year of Birth	Date of Accession
Victoria.....	1819	June 20, 1837
Edward VII.....	1841	Jan. 22, 1901
George V.....	1865	May 6, 1910
Edward VIII.....	1894	Jan. 20, 1936
George VI.....	1895	Dec. 11, 1936
Elizabeth II.....	1926	Feb. 6, 1952

The Governor General.—The Governor General is the representative of the Crown in Canada. The present incumbent, His Excellency The Right Honourable Roland Michener, C.C., C.D., is the twentieth Governor General since Confederation and was appointed by Her Majesty Queen Elizabeth II on Mar. 29, 1967, on the recommendation of the Prime Minister of Canada. Constitutionally, The Queen of Canada is the Canadian Head of State but the Governor General fulfils her role in this regard on her behalf. The Letters Patent revised and re-issued under the Great Seal of Canada on Oct. 1, 1947, authorized the Governor General “to exercise on the advice of his Canadian ministers, all Her Majesty’s powers and authorities in respect of Canada”.

Canada's Governor General, the Right Honourable Roland Michener, with the Queen of Wales, on the Royal Highness's visit to Canada in July 1970.

One of the most important responsibilities of the Governor General is to ensure that the country always has a Government. If the office of the Prime Minister becomes vacant because of death, resignation or defeat of the Government in the House of Commons (see p. 70), it is the responsibility of the Governor General to see that the office of the Prime Minister is filled and that a new Government is formed.

As the representative of The Queen—one of the three elements of the Canadian Parliament, the others being the Senate and the House of Commons—the Governor General summons, prorogues and dissolves Parliament on the advice of the Prime Minister. He signs Orders in Council, commissions and many other state documents, and gives his assent

to Bills that have been passed in both Houses of Parliament and which thereby become Acts of Parliament with the force of law (unless Parliament prescribes specifically otherwise). Like The Queen, he is bound in virtually all cases to carry out these duties in accordance with the advice of his responsible Ministers. Should he not wish to accept the advice of his responsible Ministers, and should they maintain that advice, his only alternative is to replace the existing Government with a new Government. This alternative could be exercised only if, at the same time, the principle of responsible government could be maintained. This means that the Governor General's discretion in choosing another Government is strictly limited to a situation in which a person other than the existing Prime Minister could command the confidence of the House of Commons.

In Canada, as in other constitutional monarchies, there is a clear division between the executive and representational functions of state. The Prime Minister, as the elected political leader of the country, is the Chief Executive and Head of the Government. The Governor General, on the other hand, is not involved in any way in party politics or political affiliation and he is, therefore, in a position to represent Canada as a whole and to speak for Canadians on ceremonial and state occasions. In effect, the Governor General has become an important symbol of the unity of Canada and the continuity of its institutions and national life.

The Governor General is Canada's host to visiting Heads of State and other distinguished visitors from abroad. He extends hospitality of many forms to many Canadians and lends his patronage in support of a great variety of activities throughout the country.

The Governor General receives the Letters of Credence of Ambassadors appointed to Canada, receives Commonwealth High Commissioners on appointment and holds investitures for the conferring of honours and awards. He is the Chancellor and Principal Companion of the Order of Canada, created in the Centennial Year as a means of recognizing distinguished public service and outstanding achievement or gallantry.

2.—Governors General of Canada since Confederation, 1867

Name	Date of Appointment	Date of Assumption of Office
THE VISCOUNT MONCK OF BALLYTRAMMON.....	June 1, 1867	July 1, 1867
THE BARON LISGAR OF LISGAR AND BAILLEBOROUGH.....	Dec. 29, 1868	Feb. 2, 1869
THE EARL OF DUFFERIN.....	May 22, 1872	June 25, 1872
THE MARQUIS OF LORNE.....	Oct. 5, 1878	Nov. 25, 1878
THE MARQUIS OF LANSDOWNE.....	Aug. 18, 1883	Oct. 23, 1883
THE BARON STANLEY OF PRESTON.....	May 1, 1888	June 11, 1888

GENERAL THE RIGHT HONOURABLE GEORGES P. VANIER.....	Aug. 1, 1959	Sept. 15, 1959
THE RIGHT HONOURABLE ROLAND MICHENER.....	Mar. 29, 1967	Apr. 17, 1967

The Privy Council.—The British North America Act of 1867 (Sect. 11) provides for "a council to aid and advise in the Government of Canada, to be styled the Queen's Privy Council for Canada . . .". The Council that in fact advises the Queen's representative, the Governor General, is the Committee of the Privy Council the membership of which is identical with that of the Cabinet.

3.—Members of the Queen's Privy Council for Canada According to Seniority Therein, as at May 1, 1970

NOTE.—In this list the prefix "Rt. Hon." indicates membership in the British Privy Council, or is in accordance with the Table of Titles.

Member ¹	Date When Sworn In	Member ¹	Date When Sworn In
Hon. THOMAS ALEXANDER CRERAR.....	Oct. 12, 1917	Hon. WALTER LOCKHART GORDON.....	Apr. 22, 1963

¹ The ordinary legal limit of duration for each Parliament is five years.

² Duration of Parliament in years, months and days. The life of a Parliament is counted from the date of return of election writs to the date of dissolution, both days inclusive (BNA Act, Sect. 50).

³ Date of general election.

⁴ Writs returnable.

⁵ Dissolution of Parliament.

⁶ Includes long adjournment from July 13 to Sept. 7, 1961.

⁷ Government defeated in House of Commons on want of confidence motion.

⁸ Includes long adjournment from Aug. 2 to Sept. 30, 1963.

⁹ Includes long adjournment from Dec. 18, 1964 to Feb. 16, 1965.

¹⁰ House adjourned on June 30 until Sept. 27 but dissolved on Sept. 8, 1965.

¹¹ Includes long adjournment from June 30 to Sept. 27, superseded by dissolution on Sept. 8, 1965.

¹² Includes 18-day Christmas adjournment, 11-day Easter adjournment, and two long adjournments from July 14 to Aug. 29 and Sept. 9 to Oct. 5.

¹³ Includes adjournment from July 7, 1967 to Sept. 25, 1967; Christmas adjournment from Dec. 21, 1967 to Jan. 22, 1968; and Easter adjournment from Mar. 27, 1968 to Apr. 23, 1968.

¹⁴ Includes Christmas adjournment from Dec. 20, 1968 to Jan. 14, 1969; Easter adjournment from Apr. 2, 1969 to Apr. 14, 1969; and summer adjournment from July 25, 1969 to Oct. 22, 1969.

¹⁵ Includes two days devoted to Committee work.

Membership in the Privy Council is for life. As of May 1, 1970, there were 130 members, including the 30 Cabinet Ministers of the Government of the Day, former Cabinet Ministers, various members of the Royal Family, past and present Commonwealth Prime Ministers, Premiers of provinces, former Speakers of the Senate and the House of Commons of Canada and a few distinguished civilians. A member of the Privy Council of Canada is styled "Honourable" and may use the initials "P.C." after his name. A member of the Privy Council of the United Kingdom is styled "Right Honourable". The Governor General, the Chief Justice of Canada and the Prime Minister of Canada automatically assume the title "Right Honourable" on assumption of office.

The Privy Council as a whole has met on only a few ceremonial occasions but, as already stated, its constitutional responsibilities to advise the Crown on matters respecting the Government of Canada are performed exclusively by the Committee of the Privy Council (the Cabinet). The legal instruments through which executive authority is exercised are called Orders in Council. The procedure is for the Committee of the Privy Council to make a submission to the Governor General for his approval which he is obliged to give in almost all circumstances; with this approval, the submission becomes an Order in Council. Meetings of the Committee of the Privy Council or a sub-committee of this Committee are held without formal ceremony.

The office of the President of the Privy Council was originally occupied, more often than not, by the Prime Minister but from time to time, especially in recent years, it has been occupied by another Minister. On July 5, 1968, the Prime Minister explained that the incumbent of the office of President of the Privy Council would also be the Government Leader in the House of Commons, with the broad responsibility of directing the business of the House, including such matters as the supervision of the Government's replies to questions in the House and the parliamentary returns in general, and also a special responsibility on behalf of the Government of ensuring that Parliament, through its operations and organization of business, can effectively discharge its vital role in the Canadian political process under the increasing pressure of modern government.

The Prime Minister.—The Prime Minister is the leader of the political Party requested by the Governor General to form the Government, which almost always means that he is the leader of the Party with the strongest representation in the House of Commons. His position is one of exceptional authority, which stems in part from the success of the Party at an election and the role imputed to him for that success. The Prime Minister chooses his Cabinet. When a member of his Cabinet resigns, the remainder of the Cabinet is undisturbed; when the Prime Minister vacates his office, this act normally carries with it the resignation of all those in the Cabinet.

A source of the authority of the Prime Minister lies in his prerogative to recommend the dissolution of Parliament. This prerogative, which in most circumstances permits him to precipitate an election, is a source of considerable power both in his dealings with his colleagues and with the opposition parties in the House of Commons.

Another source of the Prime Minister's authority derives from the appointments which he recommends. These include Privy Councillors, Cabinet Ministers, Lieutenant-Governors of the provinces, Provincial administrators, Speaker of the Senate, Chief Justices of all courts, and Senators. The Prime Minister also recommends the appointment of a new Governor General to the Sovereign, although this normally follows consultation with his Cabinet.

The Prime Ministers since Confederation are listed in Table 5.

5.—Prime Ministers since Confederation, 1867

Ministry	Name	Length of Administration
1	Rt. Hon. Sir JOHN ALEXANDER MACDONALD.....	July 1, 1867 — Nov. 5, 1873
2	Hon. ALEXANDER MACKENZIE.....	Nov. 7, 1873 — Oct. 16, 1878
3	Rt. Hon. Sir JOHN ALEXANDER MACDONALD.....	Oct. 17, 1878 — June 6, 1891
4	Hon. Sir JOHN JOSEPH CALDWELL ABBOTT.....	June 16, 1891 — Nov. 24, 1892
5	Rt. Hon. Sir JOHN SPARROW DAVID THOMPSON.....	Dec. 5, 1892 — Dec. 12, 1894

7	Rt. Hon. Sir CHARLES TUPPER.....	May 1, 1896 — July 8, 1896
8	Rt. Hon. Sir WILFRID LAURIER.....	July 11, 1896 — Oct. 6, 1911
9	Rt. Hon. Sir ROBERT LAIRD BORDEN.....	Oct. 10, 1911 — Oct. 12, 1917 (Conservative Administration)
10	Rt. Hon. Sir ROBERT LAIRD BORDEN.....	Oct. 12, 1917 — July 10, 1920 (Unionist Administration)
11	Rt. Hon. ARTHUR MEIGHEN.....	July 10, 1920 — Dec. 29, 1921 (Unionist—"National Liberal and Conservative Party")
12	Rt. Hon. WILLIAM LYON MACKENZIE KING.....	Dec. 29, 1921 — June 28, 1926
13	Rt. Hon. ARTHUR MEIGHEN.....	June 29, 1926 — Sept. 25, 1928
14	Rt. Hon. WILLIAM LYON MACKENZIE KING.....	Sept. 25, 1928 — Aug. 6, 1930
15	Rt. Hon. RICHARD BEDFORD BENNETT.....	Aug. 7, 1930 — Oct. 23, 1935
16	Rt. Hon. WILLIAM LYON MACKENZIE KING.....	Oct. 23, 1935 — Nov. 15, 1948
17	Rt. Hon. LOUIS STEPHEN ST. LAURENT.....	Nov. 15, 1948 — June 21, 1957
18	Rt. Hon. JOHN GEORGE DIFENBAKER.....	June 21, 1957 — Apr. 22, 1963
19	Rt. Hon. LESTER BOWLES PEARSON.....	Apr. 22, 1963 — Apr. 20, 1968
20	Rt. Hon. PIERRE ELLIOTT TRUDEAU.....	Apr. 20, 1968 — ...

The Cabinet.—As stated on p. 71, the Cabinet's primary function in the Canadian political system is to determine priorities among the demands expressed by the people and to determine the policies to meet those demands. The Cabinet is a committee of Ministers chosen by the Prime Minister, generally from among members of the House of Commons, although there have usually been one or two Ministers chosen from the Senate including the Leader of the Government in the Senate. It is unusual for a Senator to head a department of government because the Constitution provides that measures for appropriating public funds or imposing taxes must originate in the House of Commons and, as a result, almost all important legislation is initiated in the House of Commons. Also, another Minister in the House of Commons must speak on behalf of a Senator who heads a department, in respect of its affairs.

Members of the Twentieth Ministry as at May 1, 1970, are given in Table 6. Salaries, allowances and pensions of Cabinet Ministers are given at pp. 95-96.

6.—Members of the Twentieth Ministry, as at May 1, 1970¹

(According to precedence of Ministers)

NOTE.—A complete list of the members of Federal Ministries from Confederation to 1913 appears in the 1912 Year Book, pp. 422-429. Later Ministries will be found in subsequent editions.

Office	Occupant	Date of First Appointment	Date of Appointment to Present Portfolio
Prime Minister	Rt. Hon. PIERRE ELLIOTT TRUDEAU ..	Apr. 4, 1967	Apr. 20, 1968

	STANBURY		

¹ Any change occurring between May 1, 1970 and the date of going to press of this volume will be carried in an Appendix.

Each Cabinet Minister usually assumes responsibility for one of the departments of government, although a Minister may hold more than one portfolio at the same time or he may hold one or more portfolios and one or more acting portfolios. A Minister without portfolio may occasionally be asked to assume acting responsibility for a portfolio, in which capacity he exercises the same authority as if he were the Minister designate. A Minister

without portfolio may be invited to join the Cabinet because the Prime Minister wishes to have him in the Cabinet but without the heavy duties of running a department, or he may be invited to join the Cabinet to provide a suitable balance of regional representation. Because of the cultural and geographical diversity that exists in Canada, it is necessary for the Prime Minister to give more attention to the representational aspect of his Cabinet than, perhaps, his counterparts in many other countries. A Minister without portfolio may also take responsibilities for special areas of policy or to assist Ministers with particular departmental responsibilities. Currently (1970) there are three Ministers without portfolio whose special assignments in the Government include, respectively, wheat, foreign investment and citizenship.

The Cabinet Committee System

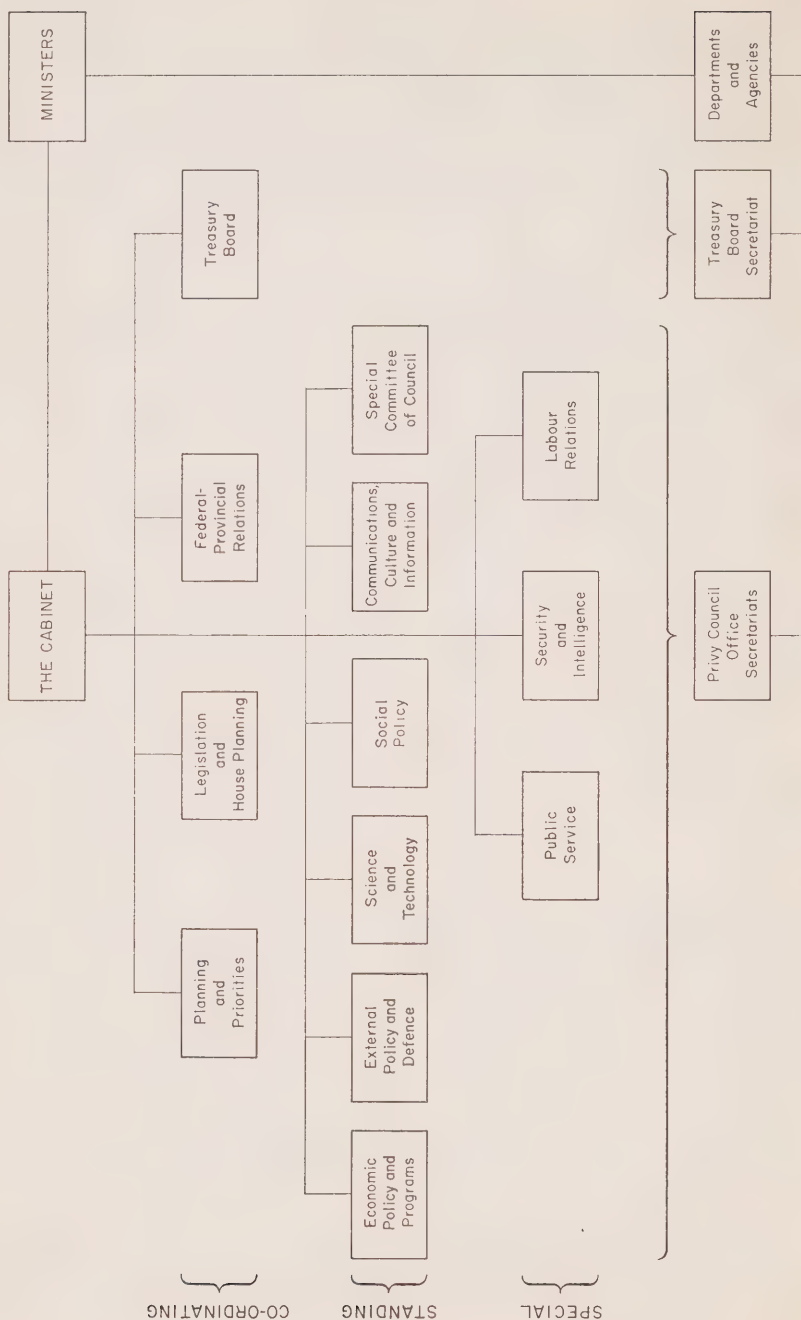

In Canada, almost all executive acts of the Government are carried out in the name of the Governor in Council. The Committee of the Privy Council (the Cabinet) makes submissions to the Governor General for his approval, and he is bound by the Constitution in nearly all circumstances to accept them. About 2,500 Orders in Council were enacted in 1969 and, although some were of a fairly routine nature and did not require much discussion in Cabinet of the policy underlying them, others were of major significance and required extensive deliberation, sometimes covering months of meetings of officials and Cabinet committees, as well as of the full Cabinet. In addition to the determination of the policy underlying the executive acts of the Government, there are literally hundreds of other policy issues that must be resolved during the course of a year. The policy underlying each piece of legislation must be considered in Cabinet and when that is approved and legislation is drafted, it must be considered in detail so that each clause and each punctuation mark has been approved by Cabinet. Recently, between 40 and 60 Bills have been considered by Cabinet during the course of a parliamentary session. Proposals for sweeping reform of large areas of government organization or administration, and policy to be adopted in fundamental constitutional changes or at a major international conference are among the issues which, on occasion, demand such extensive and detailed consideration.

It is clear that the nature and volume of policy issues to be decided on by Cabinet do not lend themselves to discussion by 25 or 30 Ministers. The first Cabinet committee system was established after the outbreak of World War II but, since that time and more particularly in recent years, growing demands placed on the executive have stimulated the development of new approaches to the devolution of the responsibilities of Cabinet to sub-committees thereof.

Cabinet committees tend to have a membership of fewer than 10 Ministers and therefore provide a forum capable of ensuring thorough study of policy proposals. The membership of Cabinet committees is confidential and the same rules of secrecy that apply to the deliberations of Cabinet apply to those of Cabinet committees. If it were otherwise, there might be a tendency for them to develop an importance and authority of their own which would be inconsistent with the principle of the collective responsibility of Ministers. The Prime Minister determines the establishment of Cabinet committees and their composition and terms of reference. Ministers may invite one or two officials as advisers during Cabinet committee meetings. The secretariat of the Cabinet committees is provided by the Privy Council Office and the Secretary of a Cabinet committee is usually also an Assistant Secretary to the Cabinet. The Treasury Board, which is a Cabinet committee—or more precisely a sub-committee of the Committee of the Privy Council—is the only exception; it has its own secretariat headed by a secretary who has the status of a deputy minister.

Under the direction of the Prime Minister, the Secretary to the Cabinet prepares Cabinet agenda and refers memoranda to Cabinet to the appropriate Cabinet committee for study and report to the full Cabinet. Except where the Prime Minister instructs otherwise, all memoranda to Cabinet are submitted under the signature of the Minister concerned.

THE CABINET COMMITTEE SYSTEM

The terms of reference of Cabinet committees cover virtually the total area of government responsibility. All memoranda to Cabinet are first considered by a Cabinet committee, except when they are of exceptional urgency or when the Prime Minister otherwise directs, in which case an item may be considered immediately by the full Cabinet.

On Apr. 30, 1968, the Prime Minister established a new format for Cabinet committees. The trend in previous years was for the development of many committees to meet immediate requirements which eventually disappeared. As a result there was a proliferation of committees and the terms of reference of some became irrelevant in terms of the demands placed on the Cabinet. The new system reduced the number of standing committees of Cabinet to eight—four subject-matter committees and four co-ordinating committees. The four subject-matter committees set up were: External Policy and Defence; Economic Policy and Programs; Communications, Works and Urban Affairs; and Social Policy. The four co-ordinating committees were: Priorities and Planning; Legislation and House Planning; Federal-Provincial Relations; and the Treasury Board. The Treasury Board is a statutory committee of the Committee of the Privy Council and under the Financial Administration Act has the status of a department. The following chart indicates the relationship of these committees to the Cabinet process.

In 1969, the arrangement established in 1968 was further modified. The co-ordinating committees of Cabinet remained, but the standing committees were: External Policy and Defence; Science Policy and Technology; Economic Policy and Programs; Social Policy; and Culture and Information. These committees meet on a regular basis. In addition, there are four special committees of the Cabinet which meet as required: the Special Committee of Council which considers all submissions to the Governor in Council on behalf of the "Committee of the Privy Council", and the Cabinet committees on the Public Service, Security and Intelligence, and Labour Relations.

Although the importance of the Cabinet committee system may vary from Government to Government, evidence of the utility of this system is the growing reliance that has been placed on Cabinet committees since the system was established at the end of the Second World War. The following is a brief outline of the involvement of Cabinet and Cabinet committees in respect of a piece of legislation that the Government ultimately introduces into the House of Commons or the Senate.

Either on the initiative of a Minister or his departmental officials, a policy proposal is prepared, the implementation of which will require new legislation or the amendment of existing legislation. The policy proposal is submitted, under the Minister's signature, for consideration by the appropriate subject-matter committee. If approval is given, the proposal goes forward to Cabinet for confirmation. If Cabinet confirms the Committee's decision, the Department of Justice is given instructions by the Minister who made the proposal to prepare a draft Bill expressing in legal terms the intent of the policy proposal. If the draft Bill meets with the Minister's approval, he submits it to the Cabinet Committee on Legislation and House Planning where it is examined from a legal point of view rather than on the basis of its underlying policy. If the Cabinet Committee agrees that the Bill is acceptable in all respects and that it could be introduced into Parliament, it so reports to Cabinet and Cabinet decides whether to confirm the Committee's decision. If confirmation is given, the Prime Minister initials the Bill and it is then introduced either into the Senate or the House of Commons, depending on constitutional and political considerations.

The order and manner in which a Bill is considered in Parliament is the responsibility of the President of the Privy Council and House Leader who negotiates these matters with his counterparts in the opposition Parties. If a Bill is to be introduced into the Senate, the House Leader will consider questions such as timing and tactics with the Leader of the Government in the Senate, who in turn will negotiate the consideration of the Bill with his counterpart in the Senate.

The Privy Council Office.—The Privy Council is a secretariat which provides staff support to the Select Committee of the Privy Council and to the Cabinet. For the purposes of the Financial Administration Act, it is considered a department of government with duties as described on p. 147. The Privy Council Office provides secretariats to serve the Cabinet, the Select Committee of the Privy Council and their various sub-committees. Since the Prime Minister is, in effect, chairman of the Cabinet, he is the Minister responsible for the Privy Council Office. The public servant who directs the work of the Privy Council Office is known as the Clerk of the Privy Council and Secretary to the Cabinet. He is the senior member of the Public Service.

Parliamentary Secretaries.—The Parliamentary Secretaries Act, which came into force in June 1959, provides for the appointment of 16 Parliamentary Secretaries from among the members of the House of Commons to assist Ministers in the performance of their duties. A Parliamentary Secretary works under the direction of his Minister and has no legal authority in respect of the department with which he is associated, nor is he given acting responsibility or any of the powers, duties and functions of a Minister in the event of his Minister's absence or incapacity. Parliamentary Secretaries are appointed by the Prime Minister and hold office for 12 months.

At May 1, 1970, the following Parliamentary Secretaries were in office:—

<u>Secretary</u>	<u>Minister</u>
JAMES E. WALKER.....	Prime Minister
JEAN-PIERRE GOYER.....	Secretary of State for External Affairs
CHARLES L. CACCIA.....	President of the Treasury Board
ROSAIRE GENDRON.....	Minister of Manpower and Immigration
DAVID W. GROOS.....	Minister of National Defence
MARTIN P. O'CONNELL.....	Minister of Regional Economic Expansion
ROBERT J. ORANGE.....	Minister of Energy, Mines and Resources
JEAN-CHARLES CANTIN.....	Minister of Justice
RUSSELL C. HONEY.....	Minister of Indian Affairs and Northern Development
JAMES McNULTY.....	Minister of Labour
YVES FOREST.....	President of the Privy Council
STANLEY HADASZ.....	Minister of National Health and Welfare
EUGENE F. WHELAN.....	Minister of Fisheries and Forestry
FLORIAN CÔTÉ.....	Minister of Agriculture
PAUL LANGLOIS.....	Minister of Consumer and Corporate Affairs
GÉRARD LOISELLE.....	Minister of Transport

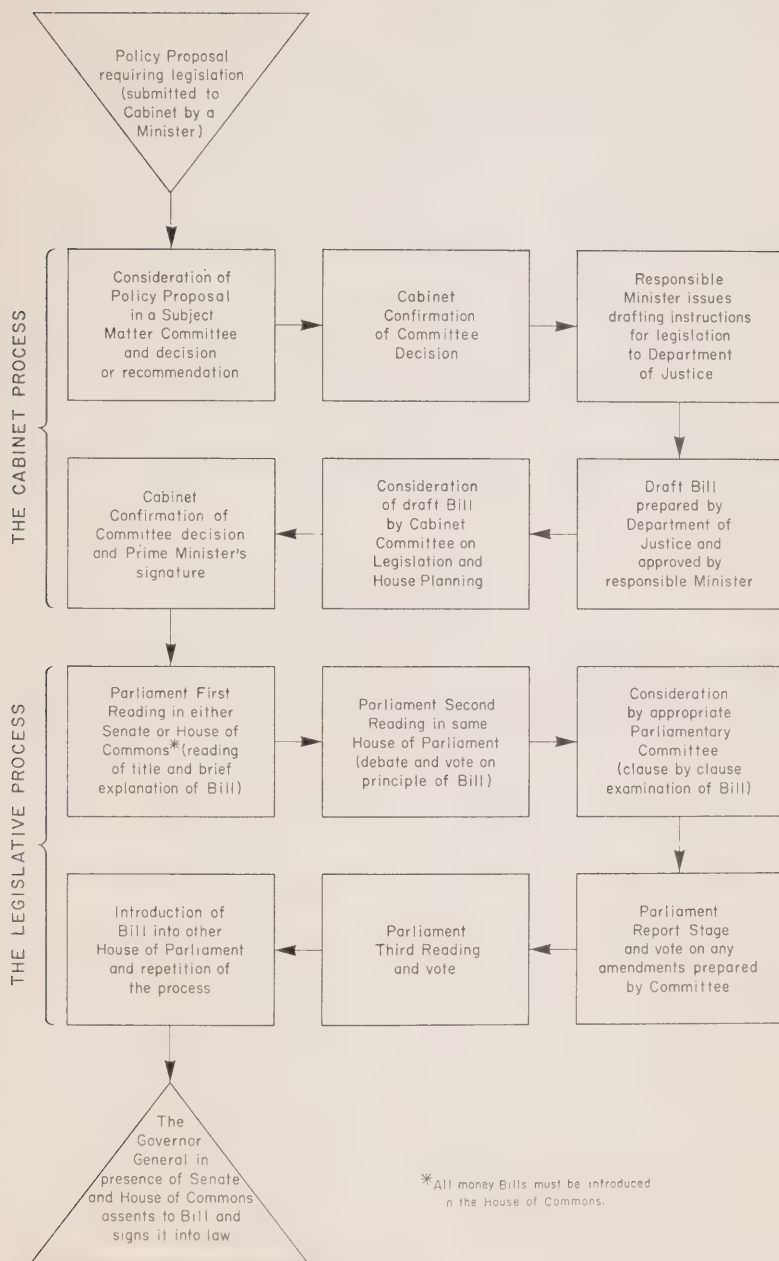

The Passage of Legislation

If a Bill is introduced in the House of Commons and is approved there, it must then be introduced into the Senate and follow a procedure similar to that followed in the House. If a Bill is first introduced into the Senate, the reverse procedure is followed. There are three types of Bills: (1) public Bills introduced by the Government; (2) public Bills introduced by private members of Parliament; and (3) private Bills introduced by private members of Parliament. Each type is treated in a slightly different manner, and there are even differences in procedure when the House deals with Government Bills introduced pursuant to "supply" and "ways and means" motions on the one hand, and other Government Bills on the other. The following is the procedure for a typical Government Bill which has been introduced in the House of Commons.

The sponsoring Minister gives notice that he intends to introduce a Bill on a given subject. Not less than 48 hours later he moves for leave to introduce the Bill and that the Bill be given first reading. This is permitted automatically because introduction or first reading of a Bill does not imply approval of any sort and it is only after first reading that the Bill is ordered to be printed for distribution to the members.

At a later sitting the Minister moves that the Bill be given second reading and that it be referred to an appropriate committee of the House of Commons. A favourable vote on the motion for second reading represents approval of the principle of the Bill so there is often an extensive debate, which, according to the standing orders of the House of Commons,

PASSAGE OF LEGISLATION

must be confined to the principle of the Bill. The debate culminates in a vote which, if favourable, results in the Bill being referred to the appropriate committee of the House, where it is given clause-by-clause consideration.

At the committee stage, expert witnesses and interested parties may be invited to give testimony pertaining to the Bill, and the proceedings of the committee may cover many weeks. Upon completion of its consideration of the Bill, the House committee prepares a report which it submits to the House of Commons. The House must then decide whether to accept the committee's report, including any amendments that the committee has made to the Bill.

At the report stage any member may, on giving 24 hours notice, move an amendment to the Bill, and all such amendments are debated and put to a vote. Following that, a motion "that the bill be concurred in" or "that the bill, as amended, be concurred in", is put to the vote.

Following this report stage, the Minister moves that the Bill be given third reading and passage. Debate of this motion is limited to whether the Bill should be given third reading. Amendments are permitted at this stage but they must be of a general nature, similar to those allowed on second reading. If the vote is favourable, the Bill is then introduced into the Senate where it goes through a somewhat similar process. (Since each House has its own rules of procedure, the processes in the two may not be identical, and are not identical at this time.) At the end of this procedure, the Bill is presented to the Governor General for Royal Assent and for his signature. Depending on the provisions in the Bill itself, it may come into force when it is signed by the Governor General, on an appointed day, or when it is officially proclaimed.

Subsection 2.—The Legislature

The federal legislative authority is vested in the Parliament of Canada consisting of The Queen, an Upper House styled the Senate, and the House of Commons. Bills may originate in either the Senate or the House, subject to the provisions of Sect. 53 of the British North America Act, 1867, which provides that Bills for the appropriation of any part of the public revenue or the imposition of any tax or impost shall originate in the House of Commons. Bills must pass both Houses and receive Royal Assent before becoming law. In practice, most public Bills originate in the House of Commons, although there has been a marked increase recently in the introduction of public Bills in the Senate, at the instance of the Government, in order that Bills may be dealt with in the Senate while the Commons is engaged in other matters such as the debate on the Speech from the Throne. Private Bills usually originate in the Senate. The Senate may delay, amend or even refuse to pass Bills sent to it from the Commons, but differences are usually settled without serious conflict. (See Chap. XXVII for current legislation.)

Under Sect. 91 of the British North America Acts, 1867 to 1964, the legislative authority of the Parliament of Canada extends to the following: the amendment of the Constitution of Canada (subject to certain exceptions—see p. 67); the public debt and property; the regulation of trade and commerce; unemployment insurance; the raising of money by any mode or system of taxation; the borrowing of money on the public credit; postal service; the Census and statistics; militia, military and naval service, and defence; the fixing of and providing for the salaries and allowances of civil and other officers of the Government of Canada; beacons, buoys, lighthouses and Sable Island; navigation and shipping; quarantine and the establishment and maintenance of marine hospitals; sea coast and inland fisheries; ferries between a province and any British or foreign country or between two provinces; currency and coinage, banking, incorporation of banks and the issue of paper money; savings banks; weights and measures; bills of exchange and promissory notes; interest; legal tender; bankruptcy and insolvency; patents of invention and discovery; copyrights; Indians and lands reserved for the Indians; naturalization and aliens; marriage and divorce; the criminal law, except the constitution of courts of criminal jurisdiction,

but including the procedure in criminal matters; the establishment, maintenance and management of penitentiaries; such classes of subjects as are expressly excepted in the enumeration of the classes of subjects by these Acts assigned exclusively to the legislatures of the provinces.

Under Sect. 95, the Parliament of Canada may make laws in relation to agriculture and immigration concurrently with provincial legislatures although federal legislation is paramount in the event of conflict. By the British North America Act, 1951 (Br. Stat. 1950-51, c. 32) it is declared that the Parliament of Canada may make laws in relation to old age pensions in Canada but no such law shall affect the operation of any provincial laws in relation to old age pensions. By the British North America Act, 1964, which received Royal Assent on July 31, 1964, this amendment was extended at the request of the Parliament of Canada (June 19, 1964) to permit the payment of supplementary benefits, including survivors' and disability benefits irrespective of age, under a contributory pension plan.

The Senate.—From an original membership of 72 at Confederation, the Senate, through the addition of new provinces and the general growth of population, now has 102 members, the latest change in representation having been made on the admission of Newfoundland to Confederation in 1949. The growth of representation in the Senate is summarized by province in Table 7.

Senators are appointed by the Governor General by instrument under the Great Seal of Canada. The actual power of appointing Senators resides by constitutional usage in the Prime Minister whose advice the Governor General accepts in this regard. Until the passage of "An Act to make provision for the retirement of members of the Senate" (SC 1965, c.4), assented to on June 2, 1965, Senators were appointed for life; that Act fixes at 75 years the age at which any person appointed to the Senate after the coming into force of the Bill will cease to hold his place in the Senate.

In each of the four main divisions of Canada except Quebec, Senators represent the whole of the province for which they are appointed; in Quebec, one Senator is appointed for each of the 24 electoral divisions of what was formerly Lower Canada. The deliberations of the Senate are presided over by a Speaker appointed by the Governor General in Council (in effect by the Government) and government business in the Senate is sponsored by the Government Leader in the Senate.

The powers of the Senate, in all respects except one, are co-extensive with those of the House of Commons. The one exception is that under the Canadian Constitution all "money Bills", i.e., Bills to impose taxes or appropriate public moneys, must originate

¹ Any change occurring between May 1, 1970 and the date of going to press of this volume will be carried in an Appendix and the Register of Official Appointments, Chap. XXVII, Pt. III.

in the House of Commons. The concurrence of the Senate is necessary before any piece of legislation, public or private, can become law. Government Bills, other than money Bills, may be introduced in either House. A substantial percentage of these are now introduced in the Senate where they may be freely discussed and amended and the House of Commons thus given the benefit of their prior scrutiny by the Senate.

The Senate also retains its traditional role in respect of legislation originating in the House of Commons, namely, to take a "sober second look" at such legislation. Amendments may be made thereto and such amendments are often concurred in by the House of Commons. If there is disagreement concerning such amendments and the disagreement is not resolved by a conference between representatives of the two Houses, the legislation cannot be further proceeded with.

The Senate provides a national forum for the discussion of public issues and the airing of grievances from whatever part of Canada they may emanate. The Senate, through its own committees and its participation in joint committees of both Houses, is particularly active in making studies in depth on matters of public concern.

The House of Commons.—The British North America Act, 1867 provided that in respect of representation in the House of Commons the Province of Quebec should have the fixed number of sixty-five members and that there should be assigned to each of the other provinces such a number of members as would bear the same proportion to the number of its population as the number sixty-five bears to the number of the population of Quebec. This Act also provided that on the completion of a census in 1871 and of each subsequent decennial census the representation of the several provinces should be re-adjusted provided the proportionate representation of the provinces as prescribed by the Act were not thereby disturbed.

In the session of 1946 the House of Commons adopted a resolution stating that the effect of the provisions of the British North America Act relating to representation had not been satisfactory in that proportionate representation of the provinces according to population had not been maintained and that a more equitable apportionment of members to the various provinces could be effected if readjustments were made on the basis of the population of all the provinces taken as a whole. The Act was amended accordingly in 1946 to provide a new rule to regulate representation in the House of Commons. Generally speaking, representation was fixed as follows:—

The membership assigned to each province shall be computed by dividing the total population of the provinces by two hundred and fifty-four and by dividing the population of each province by the quotient so obtained.

This rule, employed in the redistribution of representation made in 1947, was effective in the General Election of 1949.

After the completion of the 1951 Census it was apparent that, as a result of a wartime shift of population, a substantial reduction in the representation of the Province of Saskatchewan would ensue under the rules then regulating representation. Accordingly, in an effort to eliminate sharp reductions in provincial representation from one census to another, the British North America Act was again amended (RSC 1952, c. 304, Sect. 51) (see Canada Year Book 1963-64, p. 75) to ensure that the representation of any province should not be reduced by more than 15 p.c. at any one readjustment, subject however to the qualifications that the effect of the rule should not be to make the representation of a province with a smaller population greater than any province with a larger population.

Subsequently in 1952, Parliament enacted RSC 1952, c. 334, effective in the General Election of 1953 and in each successive General Election down to that of the Twenty-

seventh Parliament (Nov. 8, 1965), which provided that representation in the House of Commons should be on the following basis:—

Sect. 2.—Eighty-five members of the House of Commons shall be elected for the Province of Ontario, seventy-five for the Province of Quebec, twelve for the Province of Nova Scotia, ten for the Province of New Brunswick, fourteen for the Province of Manitoba, twenty-two for the Province of British Columbia, four for the Province of Prince Edward Island, seventeen for the Province of Saskatchewan, seventeen for the Province of Alberta, seven for the Province of Newfoundland, one for the Yukon Territory and one for Mackenzie district of the Northwest Territories, thus making a total of two hundred and sixty-five members.

1965 Redistribution of Representation in the House of Commons.—The Representation Commissioner Act setting up the office and duties of the Representation Commissioner was given Royal Assent on Dec. 21, 1963. The Electoral Boundaries Readjustment Act providing for the establishment of Electoral Boundaries Commissions to report upon and to provide for the readjustment of the representation of the provinces in the House of Commons in accordance with the findings of the 1961 Census of Population was given Royal Assent on Nov. 20, 1964.

Pursuant to Sect. 11 of the Electoral Boundaries Readjustment Act, the Dominion Statistician sent to the Representation Commissioner a certified return showing the population of Canada and of each of the provinces and the population of Canada by electoral districts as ascertained by the 1961 Census. The Representation Commissioner calculated the number of members of the House of Commons to be assigned to each of the provinces subject and according to the provisions of Sect. 51 of the British North America Act, 1867, and the rules provided therein. He then caused a statement to be published in the *Canada Gazette* of Nov. 28, 1964, setting forth the following results:—

Eighty-eight members of the House of Commons shall be elected for the Province of Ontario, seventy-four for the Province of Quebec, eleven for the Province of Nova Scotia, ten for the Province of New Brunswick, thirteen for the Province of Manitoba, twenty-three for the Province of British Columbia, four for the Province of Prince Edward Island, thirteen for the Province of Saskatchewan, nineteen for the Province of Alberta and seven for the Province of Newfoundland.

The Governor General, by proclamation published in the *Canada Gazette*, established an Electoral Boundaries Commission for each province. It was the task of each Commission to prepare, with all reasonable dispatch, a report setting forth its recommendations concerning the division of its particular province into electoral districts and the recommendations concerning the description of the boundaries of each such district and the representation and name to be given thereto. A copy of the 1961 Census return was sent to the chairman of each Commission immediately after its members were appointed.

Pursuant to Sect. 8 of the Representation Commissioner Act, maps were prepared in the office of the Representation Commissioner showing the distribution of population in each province and setting out alternative proposals respecting the boundaries of electoral districts in each province; these maps were then supplied to the respective Commissions. The Commissions complied with the procedure of the Electoral Boundaries Act and completed their reports within the time prescribed, which was one year. Two certified copies of each report were received by the Representation Commissioner; as required by Sect. 19(1) of that Act, one of these copies was transmitted to the Speaker of the House of Commons, who in turn laid it before the House of Commons.

Then followed a period of thirty days in which objections in writing, signed by no fewer than ten members of the House of Commons, were filed with the Speaker specifying the provisions of the report objected to and the reasons for the objection. A further period of 15 days was set aside in which the House of Commons was to consider the matter

of the objections; this period was increased to 45 sitting days by an Act, assented to on Feb. 23, 1966, entitled "An Act to extend the time for consideration of objections pursuant to Sect. 20 of the Electoral Boundaries Readjustment Act with respect to the reports of commissions established for the decennial census taken in the year 1961".

Several objections were filed with the Speaker, the motions were taken up and considered and the reports referred back to the Representation Commissioner by the Speaker and then to the Commissions. On the expiration of a thirty-day period for that purpose, the Commissions returned their reports with or without amendment, through the Representation Commissioner to the Speaker. Then a draft representation order was prepared by the Representation Commissioner to be transmitted to the Secretary of State. This order specified the number of members of the House of Commons who shall be elected for each of the provinces as calculated by the Representation Commissioner and, dividing each of the provinces into electoral districts, described the boundaries of each such district and specified the representation and name given thereto, in accordance with the recommendations contained in the reports. The Governor in Council, by proclamation of June 16, 1966, declared the draft representation order to be in force, effective upon the dissolution of the then-existing Parliament.

At the subsequent election, according to the representation order set out in the Schedule to the Proclamation, 88 members of the House of Commons shall be elected for the Province of Ontario, 74 for the Province of Quebec, 11 for the Province of Nova Scotia, 10 for the Province of New Brunswick, 13 for the Province of Manitoba, 23 for the Province of British Columbia, four for the Province of Prince Edward Island, 13 for the Province of Saskatchewan, 19 for the Province of Alberta and seven for the Province of Newfoundland. In addition, one member each will be elected for the Yukon Territory and the Northwest Territories, making a total representation of 264 in the House of Commons.

The number of representatives of each province elected at each of the 28 General Elections since Confederation is given in Table 9.

Salaries, Allowances and Pensions of Senators and Members of the House of Commons.—Members of the Senate and House of Commons receive a sessional allowance at the rate of \$12,000 per annum. In addition, for each session of Parliament, they may be paid travelling expenses between their place of residence or constituency and Ottawa as may be required for the performance of their duties as members of the Senate or House of Commons. Senators receive an annual expense allowance of \$3,000 and members of the House of Commons receive an expense allowance of \$6,000, neither of which is subject to income tax, and is payable quarterly. The member of the Senate occupying the recognized position as Leader of the Government in the Senate is paid, in addition to his sessional allowance, an annual allowance of \$10,000 and to the member of the Senate occupying the recognized position as Opposition Leader in the Senate there is paid, in addition to his sessional allowance, an annual allowance of \$6,000; but if the Leader of the Government is in receipt of a salary under the Salaries Act the annual allowance is not paid. The remuneration of the Prime Minister is \$25,000 a year and of a Cabinet Minister and the Leader of the Opposition in the House of Commons \$15,000 a year in addition to the sessional and expense allowances each receives as a member of Parliament. The remuneration of a Minister without Portfolio is \$7,500 a year in addition to the sessional and expense allowances, the latter being not taxable. Additional annual allowances of \$4,000 (beyond the above-noted sessional allowance) are provided to each Leader of a Party having a recognized membership of twelve or more persons in the House of Commons other than the Prime Minister and the member occupying the recognized position as Leader of the Opposition in the House of Commons and, likewise, to the Chief Government Whip and to the Chief Opposition Whip in the House of Commons. The Speaker of the Senate and the Speaker of the House of Commons each receives, besides the sessional allowance and expense allowance, a salary of \$9,000 per annum. The Deputy Speaker of the House of Commons receives a salary of \$6,000 per annum. The Speakers of the Senate and of the House of Commons are also entitled to \$3,000 in lieu of residence and the Deputy Speaker of the House of Commons an allowance of \$1,500 in lieu of residence; these allowances are not taxable. The Deputy Chairman of Committees receives an annual allowance of \$4,000. Parliamentary Secretaries to the Ministers of the Crown

receive an annual allowance of \$4,000 a year, in addition to their sessional and expense allowances. A motor vehicle allowance of \$2,000 is paid to each Minister of the Crown and to the recognized Leader of the Opposition in the House of Commons, and a motor vehicle allowance of \$1,000 is paid to the Speakers of the Senate and of the House of Commons; these allowances are not taxable.

A member of Parliament contributes, by reservation, $7\frac{1}{2}$ p.c. of his sessional indemnity toward his retirement allowance, which is based on the average of the sessional indemnity received over the best consecutive six years of his pensionable service accumulated as follows: (1) $3\frac{1}{2}$ p.c. of this six-year average for each of the first 10 years of pensionable service; (2) 3 p.c. of this average for each of the next 10 years; (3) 2 p.c. of this average for each of the next five years; and (4) 2 p.c. of this average for each of the years of pensionable service earned by his contributions from salary for extra duties performed as a Minister, etc.; subject to an over-all maximum of 75 p.c. of that best six-year average. The survivor's benefits are as follows: (1) 60 p.c. of the member's pension entitlement to the widow or widower; (2) if there is a surviving parent, 10 p.c. of the member's pension entitlement for each child up to three; and (3) if there is no surviving parent, 20 p.c. to the member's pension entitlement for each child up to four. A member who was a member at Mar. 31, 1970, could have decided to stay under the old plan, the only difference being that he must now contribute on his expense allowance as well as his sessional allowance. All other items that were applicable under the old plan remain in effect.

An Act to make provision for the retirement of members of the Senate (SC 1965, c. 4) entitles a Senator appointed after June 2, 1965 to become a contributor under the provisions of the Members of Parliament Retiring Act. Senators appointed prior to that date and who have not attained the age of 75 years, who elect under the provisions of this Act, are also entitled to become contributors. Under the provisions of the Retirement Act, as amended, a Senator contributes, by reservation, 6 p.c. of his combined earnings (indemnity plus annual expense allowance) to the Consolidated Revenue Fund. A Senator appointed before June 2, 1965 who (a) within one year of attaining the age of 75 years resigns his place in the Senate or (b) resigns due to some permanent infirmity disabling him from performing his duties in the Senate, may be granted an annuity equal to two thirds of his sessional indemnity for life. The widow of a person granted such an annuity may receive an annuity equal to three fifths of the annuity to the ex-member of the Senate.

Every former Prime Minister who held office for four years will receive from the Consolidated Revenue Fund an allowance of two thirds of the annual salary provided for Prime Ministers under the Salaries Act, the allowance to commence when the former Prime Minister ceases to hold office, or attains the age of 70 years, whichever is the later, and to continue during his lifetime. The widow of a Prime Minister will receive an annual payment of one third of the allowance that was being paid or that would have been paid to her husband, where he dies without receiving the allowance, such allowance to commence immediately after the death of her husband and to continue during her natural life or until her remarriage. None of these allowances is payable while the recipient is a Senator or a member of the House of Commons.

The Federal Franchise.—The present federal franchise laws are contained in the Canada Elections Act (SC 1960, c. 39). The franchise is conferred upon all Canadian citizens or British subjects, men and women, who have attained the age of 21 years, are ordinarily resident in the electoral district on the date of the issue of the writ ordering an election and, in the case of British subjects other than Canadian citizens, have been ordinarily resident in Canada for twelve months prior to polling day at such election. Persons denied the right to vote are:—

- (1) the Chief Electoral Officer and the Assistant Chief Electoral Officer;
- (2) judges appointed by the Governor General in Council;
- (3) the returning officer for each electoral district;

- (4) persons undergoing punishment as inmates of any penal institution for the commission of any offence;
- (5) persons restrained of their liberty or deprived of the management of their property by reason of mental disease; and
- (6) persons disqualified under any law relating to the disqualification of electors for corrupt and illegal practices.

Prior to July 1, 1960, the list of persons denied the right to vote included "Indians ordinarily resident on an Indian reserve who were not members of His Majesty's Forces in World Wars I or II or who did not execute a waiver of exemption under the Indian Act from taxation on and in respect of personal property". Legislation proclaimed on the above-mentioned date confers upon all Indians who have attained the age of 21 years the right to vote at federal elections, without taking from them any of the rights and privileges to which they are entitled under the Indian Act. The Eskimos who are Canadian citizens possess the right to vote in federal elections, and the assumption of that right in the far-flung communities of the Canadian Far North has grown with the establishment by the Government of electoral districts and polling facilities.

The Canadian Forces Voting Rules set out in Schedule II to the Canada Elections Act prescribe voting procedure for members of the Armed Forces of Canada and also for veterans in receipt of treatment or domiciliary care in certain institutions.

11.—Voters on the Lists and Votes Polled at the Federal General Elections of 1962, 1963, 1965 and 1968

NOTE.—Corresponding statistics for the General Elections of 1911, 1917, 1921 and 1925 are given in the 1926 Year Book, p. 82; those for 1926 in the 1945 edition, p. 66; those for 1930 and 1935 in the 1948-49 edition, p. 94; those for 1940 in the 1956 edition, p. 81; those for 1945 in the 1957-58 edition, p. 57; those for 1949, 1953 and 1957 in the 1962 edition, p. 71; and those for 1958 in the 1966 edition, p. 90.

Subsection 3.—The Judiciary

The Federal Judiciary

The Parliament of Canada is empowered by Sect. 101 of the British North America Act from time to time to provide for the constitution, maintenance and organization of a general Court of Appeal for Canada and for the establishment of any additional courts for the better administration of the laws of Canada. Under this provision, Parliament has established the Supreme Court of Canada, the Exchequer Court of Canada and certain miscellaneous courts.

Supreme Court of Canada.—This Court, first established in 1875 and now governed by the Supreme Court Act (RSC 1952, c. 259), consists of a chief justice, who is called the Chief Justice of Canada, and eight puisne judges. The chief justice and the puisne judges are appointed by the Governor in Council and they hold office during good behaviour but are removable by the Governor General on address of the Senate and the House of Commons. They cease to hold office upon attaining the age of 75 years. The Court sits at Ottawa and exercises general appellate jurisdiction throughout Canada in civil and criminal cases. The Court is also required to consider and advise upon questions referred to it by the Governor in Council and it may also advise the Senate or the House of Commons on private Bills referred to the Court under any rules or orders of the Senate or of the House of Commons.

Appeals may be brought from any final judgment of the highest court of final resort in a province in any case where the amount or value of the matter in controversy exceeds the sum of \$10,000. An appeal may be brought from any other final judgment with leave of the highest court of final resort in the province; if such court refuses to grant leave, the Supreme Court of Canada may grant leave to appeal. The Supreme Court may grant leave to appeal from any judgment whether final or not. Appeals in respect of indictable offences are regulated by the Criminal Code. Appeals from federal courts are regulated by the statute establishing such courts. The judgment of the Supreme Court of Canada in all cases is final and conclusive.

12.—Chief Justice and Judges of the Supreme Court of Canada, as at May 1, 1970

(In order of seniority)

Name	Date of Appointment
Rt. Hon. Mr. JOSEPH HONORÉ GÉRALD FAUTEUX, Chief Justice of Canada.....	Mar. 23, 1970 ¹
Hon. Mr. Justice DOUGLAS CHARLES ABBOTT.....	July 1, 1954

Hon. Mr. Justice BORA LASKIN.....	Mar. 19, 1970

¹ First appointed a Judge of the Supreme Court, Dec. 23, 1949.

Exchequer Court of Canada.—The Exchequer Court was first established in 1875 as part of the Supreme Court of Canada but is now a separate court governed by the Exchequer Court Act (RSC 1952, c. 98). The Court consists of a president and six puisne judges who are appointed by the Governor in Council. The president and the puisne judges hold office during good behaviour but may be removed by the Governor General on address of the Senate and the House of Commons. They cease to hold office upon attaining the age of 75 years. The Court sits at Ottawa and also at any other place in Canada where sittings may be fixed by the Court. The jurisdiction of the Court extends to cases where claims are made by or against the Crown in right of Canada. Proceedings against the Crown are taken by petition of right pursuant to the Petition of Right Act (RSC 1952, c. 210).

An appeal lies to the Supreme Court of Canada from any final judgment of the Exchequer Court in which the amount in controversy exceeds \$500; an appeal also lies with leave of the Supreme Court in certain cases where the amount in controversy does not exceed \$500 or where the judgment is not final.

The Exchequer Court also exercises admiralty jurisdiction in Canada. This was first conferred in 1891 by the Admiralty Act (SC 1891, c. 29) and is now governed by the Admiralty Act (RSC 1952, c. 1). Under this statute, the Exchequer Court is continued as a Court of Admiralty. The president and puisne judges of the Exchequer Court exercise admiralty jurisdiction throughout the whole of Canada. In addition, Canada is divided into various admiralty districts; a district judge in admiralty is appointed for each district. Appeals to the Supreme Court of Canada from judgments of the president or the puisne judges are governed by the general appeal provisions in the Exchequer Court Act. Appeals may be taken from a final judgment of a district judge in admiralty either to the Exchequer Court or direct to the Supreme Court of Canada.

Miscellaneous Courts.—*Railway Act and National Transportation Act.*—The Railway Act, 1903 (RSC 1952, c. 234) established the Board of Railway Commissioners for Canada as a court of record; by the Transport Act, 1938 (RSC 1952, c. 271) the name was changed to the Board of Transport Commissioners for Canada, and by the National Transportation Act, 1967 (SC 1966-67, c. 69) to the Canadian Transport Commission. This court exercises jurisdiction with respect to transport matters under the Railway Act and under the National Transportation Act, and with respect to telegraph and telephone matters under the Railway Act. The Governor in Council is given jurisdiction to vary or rescind any order of the Commission and an appeal lies from the Commission to the Supreme Court of Canada upon a question of jurisdiction or a question of law.

Bankruptcy Act.—By virtue of Sect. 91(21) of the British North America Act, 1867, Parliament has exclusive legislative jurisdiction in relation to bankruptcy and insolvency. By the Bankruptcy Act (RSC 1952, c. 14) the superior courts of the provinces are constituted bankruptcy courts; original jurisdiction is conferred upon the trial courts and appellate jurisdiction is conferred upon the appeal courts of the provinces.

Income Tax Act and Estate Tax Act.—By the Income Tax Act (RSC 1952, c. 148) the Tax Appeal Board is established consisting of a chairman and not fewer than two or more than four members with jurisdiction over appeals against income tax assessments. A further appeal may be taken to the Exchequer Court. Under the Estate Tax Act (SC 1958, c. 29), the Tax Appeal Board also has jurisdiction to hear appeals from assessments under that Act.

National Defence Act.—The Court Martial Appeal Court was established in 1959 by an amendment to the National Defence Act (SC 1959, c. 5). The judges of the Court are not fewer than four judges of the Exchequer Court of Canada designated by the Governor in Council and such additional judges of a superior court of criminal jurisdiction as are appointed by the Governor in Council. The Governor in Council designates one of the judges to be president of the Court. The Court hears appeals from courts martial respecting the legality of a finding of guilty on any charge and the legality of a sentence passed by a court martial. An appeal lies from the Court Martial Appeal Court to the Supreme Court of Canada on a question of law only.

Provincial and Territorial Judiciaries

Certain provisions of the British North America Act govern to some extent the provincial judiciaries. Under Sect. 92(14) the legislature of each province exclusively may make laws in relation to the administration of justice in the province including the constitution, maintenance and organization of provincial courts both of civil and of criminal jurisdiction. Sect. 96 provides that the Governor General shall appoint the judges of the superior, district and county courts in each province, except those of the courts of

probate in Nova Scotia and New Brunswick. Sect. 100 provides that the salaries, allowances and pensions of judges of the superior, district and county courts (except the courts of probate in Nova Scotia and New Brunswick) are to be fixed and provided by the Parliament of Canada and these are set out in the Judges Act (RSC 1952, c. 159 and amendments). Under Sect. 99, the judges of the superior courts hold office during good behaviour but are removable by the Governor General on address of the Senate and the House of Commons. They cease to hold office upon attaining the age of 75 years. The tenure of office of district and county court judges is fixed by the Judges Act as being during good behaviour and their residence within the area for which the court is established.

Newfoundland.—*Supreme Court (Judicature Act, RSN 1952, c. 114, as amended).*—The Supreme Court of Newfoundland consists of a chief justice and three other judges, all appointed by the Governor in Council. The Court has original and appellate jurisdiction.

District Courts (District Courts Act, RSN 1952, c. 116, as amended).—District courts were set up under the District Courts Act. A district court judge has civil jurisdiction where the amount involved does not exceed \$5,000 and on the criminal side he has the same jurisdiction as a county court judge in other provinces.

Stipendiary Magistrates and Justices of the Peace (Summary Jurisdiction Act, RSN 1952, c. 117).—Stipendiary magistrates and justices of the peace are appointed for the province. They have limited criminal and civil jurisdiction.

Prince Edward Island.—*Supreme Court (RSPEI 1951, c. 79).*—The Supreme Court of Prince Edward Island consists of a chief justice, known as the Chief Justice of Prince Edward Island, and three other judges, all appointed by the Governor in Council. The Court has original and appellate jurisdiction.

Court of Chancery (RSPEI 1951, c. 21).—The Court of Chancery consists of a chancellor, a vice-chancellor and the master of the rolls. The Chancellor is the Lieutenant-Governor, the Vice-Chancellor is one of the judges of the Supreme Court and the Master of the Rolls is one of the other judges of the Supreme Court. The Court has original jurisdiction in chancery matters.

County Courts (RSPEI 1951, c. 35).—There are three counties in the province, each with a county court and a judge. County courts have criminal and civil jurisdiction generally in actions involving amounts up to \$1,000 but have no jurisdiction in cases involving title to or possession of land.

Magistrates and Justices of the Peace (RSPEI 1951, c. 89).—Magistrates and justices of the peace are appointed by the Lieutenant-Governor in Council. They have limited criminal and civil jurisdiction.

Nova Scotia.—*Supreme Court (Judicature Act, SNS 1950).*—The Supreme Court of Nova Scotia has an Appeal Division and a Trial Division. The former consists of the Chief Justice of Nova Scotia and two other judges and the latter consists of the Chief Justice of the Trial Division and five other judges.

County Courts (RSNS 1967, c. 64).—There are seven county court districts in Nova Scotia and a county court and judge for each district who is appointed by the Governor in Council. Each court has criminal jurisdiction under the Criminal Code and jurisdiction in civil cases involving amounts up to \$10,000.

Probate Courts (RSNS 1967, c. 238).—County court judges are ex officio judges in probate. Probate matters are decided in the first instance by a registrar of probate and appeals may be taken to the probate judges. A registrar of probate is appointed for each county.

Magistrates.—There are 13 active stipendiary magistrates and 17 provincial magistrates, all appointed by the Lieutenant-Governor in Council. They have limited criminal jurisdiction and civil jurisdiction involving amounts up to \$500.

Minor Courts of Civil Jurisdiction.—These are courts established pursuant to city charters, municipal courts and justices courts. The city and municipal courts have jurisdiction involving amounts up to \$500 and justices courts have jurisdiction involving amounts up to \$20 when one justice is sitting or up to \$80 when two justices are sitting.

Juvenile Courts (RSNS 1967, c. 31).—The Child Welfare Act provides for the establishment of juvenile courts and the appointment of juvenile court judges. The courts exercise jurisdiction in juvenile matters under provincial statutes and are also juvenile courts under the federal Juvenile Delinquents Act. There are seven juvenile court judges.

Family Courts (RSNS 1967, c. 98).—This Act authorizes the establishment of family courts for any area within the province and for the appointment of judges. The courts exercise jurisdiction over juvenile matters, including juveniles and neglected children and the enforcement of maintenance legislation. Family courts now serve the metropolitan districts of Halifax and Sydney.

Court of Divorce and Matrimonial Causes (RSNS, Third Series, c. 126).—This court was established by a pre-Confederation statute and has jurisdiction in divorce and other matrimonial causes. Judges of the Supreme Court are also appointed judges of this court.

New Brunswick.—Supreme Court (RSNB 1952, c. 120).—The Supreme Court of New Brunswick has an Appeal Division and a Queen's Bench Division. The Appeal Division consists of a chief justice, known as the Chief Justice of New Brunswick, and three other judges; the Queen's Bench Division consists of a chief justice and five other judges. The Appeal Division has general appellate jurisdiction throughout the province and the Queen's Bench Division has unlimited original jurisdiction throughout the province in civil and criminal matters. All judges are appointed by the Governor in Council.

Court of Divorce and Matrimonial Causes (RSNB 1952, c. 63).—This court was established by a pre-Confederation statute which has continued in force to date. Although the Act stands unrepealed, no judge is appointed to it. The court now has jurisdiction only in matrimonial causes other than divorce, its divorce jurisdiction having been transferred to the Queen's Bench Division by the federal Divorce Act 1967-68.

County Courts (RSNB 1952, c. 45).—The province is divided into counties with a county court for each county or group of counties. There are six county court judges, appointed by the Governor in Council. These courts have criminal jurisdiction, jurisdiction in contracts up to \$2,000 and jurisdiction in damage actions up to \$2,000. They have no jurisdiction where title to land is brought in question or where the validity of any devise or bequest is disputed.

Probate Courts (RSNB 1952, c. 175).—A probate court is established by a provincial Act for each county and each such court is presided over by a judge appointed by the Lieutenant-Governor in Council. These courts have jurisdiction over estates.

Juvenile Courts (RSNB 1952, c. 123).—The Juvenile Courts Act provides for the establishment of a juvenile court for each place where the federal Juvenile Delinquents Act is in force. Fifteen judges have been appointed. These courts have jurisdiction in juvenile matters under provincial statutes and are also juvenile courts under the federal Juvenile Delinquents Act.

Provincial Court (SNB 1969, c. 17).—Provincial court judges have jurisdiction throughout the province in criminal matters under Part XVI of the federal Criminal Code and in quasi-criminal matters under any law or statute in force in the province.

Quebec.—*Court of Queen's Bench.*—This Court, established under the Quebec Courts of Justice Act (RSQ 1964, c. 20), is composed of a chief justice called the Chief Justice of the Province of Quebec, and 11 other judges, all appointed by the Governor in Council. The Court has appellate jurisdiction in the civil matters as set out in Sect. 42 of the Code of Civil Procedure, and appellate jurisdiction concerning convictions on indictments (Sects. 581 and 582). It also has original jurisdiction in criminal matters when an accused is committed to stand trial, and jurisdiction in accordance with the provisions of Sect. 719 of the federal Criminal Code relating to appeals against summary conviction.

Superior Court.—The Superior Court is a court of record and is composed of a chief justice, an associate chief justice and 85 puisne judges, all appointed by the Governor in Council. The Superior Court is the court of common law and has original jurisdiction in all suits or actions not specifically attributed to any other court by formal provision in any Act.

Provincial Court.—The Provincial Court consists of 102 judges appointed by the Lieutenant-Governor in Council, including a chief justice and an associate chief justice. Its jurisdiction is defined in Sect. 34 of the Code of Civil Procedure. It has exclusive jurisdiction except for that of the Superior Court in all matters where the amount at issue is less than \$3,000 (increased from \$1,000 on July 1, 1970), except in cases of requests for alimony and those reserved for the Exchequer Court of Canada.

Social Welfare Courts.—These courts are established in all judicial districts of Quebec. The number of judges, including a chief justice and an associate chief justice, must not exceed 40 and all are appointed by the Lieutenant-Governor in Council. These courts are authorized to hear cases of juvenile delinquents within the meaning of the federal Juvenile Delinquents Act and their jurisdiction also covers the enforcement of certain provincial laws, such as the Youth Protection Schools Act, the Quebec Public Charities Act, the Lunatic Asylums Act and the Adoption Act.

Court of the Sessions of the Peace.—This is a court of record composed of 50 judges including a chief justice residing in Montreal and a chief justice residing in Quebec City. All are appointed by the Lieutenant-Governor in Council and exercise, in criminal and penal matters, such powers as are conferred on them by federal or provincial legislation.

Magistrates' Courts.—Magistrates' courts are established in accordance with a by-law of a city or town and judges, who must be lawyers who have practised for at least three or five years depending upon whether the population of the municipality of residence is greater or less than 10,000, are appointed by the Lieutenant-Governor in Council.

Justices of the Peace.—Justices of the peace are appointed by the Lieutenant-Governor in Council and exercise the duties imposed on them by the Criminal Code and other federal laws, as well as by the Quebec Summary Convictions Act (RSQ 1964, c. 35) and other provincial Acts.

Ontario.—*Supreme Court (RSO 1960, c. 197).*—The Supreme Court of Ontario has two divisions, one known as the Court of Appeal for Ontario and the other as the High Court of Justice for Ontario. The Court of Appeal consists of a chief justice, called the Chief Justice of Ontario, and nine other judges. The High Court of Justice consists of a chief justice, known as the Chief Justice of the High Court, and 26 other judges. All judges are appointed by the Governor in Council. The Court of Appeal has general appellate jurisdiction throughout the province and the High Court of Justice has unlimited original jurisdiction in civil and criminal matters.

County and District Courts (RSO 1960, c. 76).—Ontario is divided into 48 counties and districts with a county or district court for each and one or more judges for each court. There is a chief judge and 87 other judges, all appointed by the Governor in Council. These courts have no criminal jurisdiction except on appeal from the decision of magistrates

and justices of the peace in summary conviction cases. They have jurisdiction in contracts and in personal property actions where the amount claimed does not exceed \$3,000.

General Sessions of the Peace (RSO 1960, c. 163).—There is a court of general sessions of the peace for each county and district in the province. Sittings are held quarterly in the Counties of York and Wentworth and semi-annually in the other counties and districts. The courts are presided over by the judge of the county court, acting as chairman. They sit with a jury and have jurisdiction to try any indictable offence except those set out in Sect. 413 of the federal Criminal Code, which are within the exclusive jurisdiction of the superior courts.

County Court Judges Criminal Courts (RSO 1960, c. 75).—These are criminal courts held in every county and district in the province for the speedy trial of indictable offences under Part XVIII of the Criminal Code. They are presided over by the county or district court judge sitting without a jury. They have jurisdiction to try, on the election of the accused, any indictable offence except those set out in Sect. 413 of the Criminal Code.

Surrogate Courts (RSO 1950, c. 380).—There is a surrogate court for each county or district. The court has jurisdiction to deal with probate and administration matters and is presided over by the county or district court judge.

Division Courts (RSO 1960, c. 110).—There are 206 division courts throughout Ontario, presided over by the county or district court judge who sits in the jurisdiction where the particular division court is located. Jurisdiction is limited to cases involving up to \$400 in the counties and to \$800 in the districts.

Provincial Courts (Family Division) (SO 1968, c. 103, Pt. III).—The juvenile courts for Ontario have jurisdiction in juvenile cases under provincial legislation; in addition they are juvenile courts for the purposes of the federal Juvenile Delinquents Act. The judges are appointed by the Lieutenant-Governor in Council.

Provincial Courts (Criminal Division) (SO 1968, c. 103, Pt. II).—Provincial judges are appointed by the Lieutenant-Governor in Council. They have limited criminal jurisdiction and are ex officio justices of the peace.

Justices of the Peace (RSO 1960, c. 200).—Justices of the peace have limited civil and criminal jurisdiction. They are appointed by the Lieutenant-Governor in Council.

Manitoba.—*Court of Appeal (RSM 1970, c. 240).*—The Court of Appeal consists of a chief justice, called the Chief Justice of Manitoba, and four other judges. All judges are appointed by the Governor in Council. The Court has general appellate jurisdiction throughout the province.

Court of Queen's Bench (RSM 1970, c. 280).—The Court consists of a chief justice, known as the Chief Justice of the Queen's Bench, and seven other judges. All judges are appointed by the Governor in Council. The Court has unlimited original jurisdiction in civil and criminal cases throughout the province.

County Courts (RSM 1970, c. 260).—The province is divided into five judicial districts and a number of county courts are established for each district. There are six judges for the Eastern Judicial District and each of the other districts has one judge. A judge has jurisdiction over all county courts within the judicial district to which he is appointed. These courts have limited criminal jurisdiction and also jurisdiction, generally, in claims not exceeding \$2,000, but have no jurisdiction in certain types of actions such as recovery of land.

Surrogate Courts (RSM 1970, c. 290).—There is a surrogate court for each judicial district and the Surrogate Courts Act provides that the county court judge in each judicial district is to be the judge of the surrogate court of that district. These courts have jurisdiction and authority in relation to testamentary matters.

Family Courts (RSM 1970, c. 230).—The family courts are established under the Corrections Act (SM 1966, c. 12) and the territorial jurisdiction of each court is set out in the Order in Council establishing the court and appointing the judges. There are a number of judges appointed in each district, one of whom is designated the senior judge. A family court has jurisdiction over any or all charges, offences, and matters arising from or under any one or more of the following Acts: the Juvenile Delinquents Act (Canada), the Child Welfare Act, the Wives' and Children's Maintenance Act, the Reciprocal Enforcement of Maintenance Orders Act, the Parents' Maintenance Act, and such other Acts or matters as the Lieutenant-Governor in Council may designate.

Magistrates (RSM 1970, c. M10).—Magistrates are appointed by the Lieutenant-Governor in Council and, in addition to criminal jurisdiction, have jurisdiction to try actions for debt where the amount does not exceed \$100. An appeal lies to a county court judge. There are 45 magistrates and a chief magistrate in the province. Under the Corrections Act, a magistrate is ex officio a family court judge.

Justices of the Peace (RSM 1970, c. M10).—Justices of the peace, appointed by the Lieutenant-Governor in Council, have limited criminal jurisdiction and also small-debt jurisdiction up to \$100.

Saskatchewan.—*Court of Appeal (RSS 1965, c. 72).*—The Court of Appeal consists of a chief justice, called the Chief Justice of Saskatchewan, and four other judges. All judges are appointed by the Governor in Council. The Court has general appellate jurisdiction throughout the province.

Court of Queen's Bench (RSS 1965, c. 73).—The Court of Queen's Bench consists of a chief justice, called the Chief Justice of the Queen's Bench, and seven other judges. All judges are appointed by the Governor in Council. The Court has unlimited original jurisdiction in civil and criminal matters throughout the province.

District Court (RSS 1965, c. 74).—There is a court of record called the District Court for Saskatchewan, which has 18 district court judges appointed by the Governor in Council. The Court has jurisdiction generally in all cases where the claim does not exceed \$5,000 but jurisdiction does not include cases where title to land is brought in question or where the validity of any devise or bequest is disputed. Jurisdiction is also excluded in certain personal actions such as malicious prosecution, malicious arrest, false imprisonment, libel, slander and breach of promise of marriage. The Court also has criminal jurisdiction.

Surrogate Court (RSS 1965, c. 75).—There is a Surrogate Court for Saskatchewan. The Surrogate Court Act provides that the judges of the District Court shall be the judges of the Surrogate Court. The Court has jurisdiction in probate matters.

Juvenile Courts (RSS 1965, c. 268).—Under the Child Welfare Act, a juvenile court for the province is established within the meaning of the federal Juvenile Delinquents Act for the purpose of dealing with juvenile delinquents and all causes and matters respecting delinquents. Judges of District and Magistrates' Courts and provincial magistrates are ex officio judges of the Juvenile Court.

Judges of the Magistrates' Courts (RSS 1965, c. 110).—Judges of the Magistrates' Courts are appointed by the Lieutenant-Governor in Council and have jurisdiction as such throughout Saskatchewan. No person shall be appointed a judge unless he is a member in good standing of the Bar of one of the provinces of Canada and has been such a member or a provincial magistrate for at least five years immediately before the day on which he is appointed. A judge of the Magistrates' Courts exercises criminal jurisdiction and is, by virtue of his office, a provincial magistrate and a justice of the peace for Saskatchewan.

Provincial Magistrates (RSS 1965, c. 111).—Provincial magistrates are appointed by the Lieutenant-Governor in Council and have jurisdiction throughout Saskatchewan. A provincial magistrate is, by virtue of his office, a justice of the peace for Saskatchewan.

Justices of the Peace (RSS 1965, c. 112).—Justices of the peace are appointed by the Lieutenant-Governor in Council and have jurisdiction as such throughout the province. A justice of the peace has limited criminal jurisdiction.

Small Claims Enforcement (RSS 1965, c. 102).—This Act applies to all actions for debt, damages or recovery of goods or chattels where the amount involved does not exceed \$200 but jurisdiction does not include cases where title to land is brought in question or where the validity of any devise or bequest is disputed. Jurisdiction is also excluded in certain personal actions such as malicious prosecution, malicious arrest, false imprisonment, libel, slander, criminal conversation, seduction or breach of promise of marriage. Hearings are presided over by a judge appointed under the Magistrates' Courts Act or a provincial magistrate appointed under the Provincial Magistrates Act.

Alberta.—*Supreme Court (RSA 1955, c. 164).*—The Supreme Court consists of two branches or divisions, one designated as the Appellate Division of the Supreme Court of Alberta and the other as the Trial Division of the Supreme Court of Alberta. The Appellate Division consists of a chief justice, called the Chief Justice of Alberta, and six other judges. The Trial Division consists of a chief justice, called the Chief Justice of the Trial Division of the Supreme Court of Alberta, and 11 other judges. All judges of the Supreme Court are appointed by the Governor in Council. The Appellate Division exercises general jurisdiction throughout the province and the Trial Division has unlimited original jurisdiction in civil and criminal matters.

District Courts (RSA 1955, c. 87).—The District Courts Act provides for the formation of two courts of record—the District Court of the District of Northern Alberta and the District Court of the District of Southern Alberta. The former consists of a chief judge and seven other judges and the latter consists of a chief judge and six other judges. The district courts generally have jurisdiction in all matters where the claim does not exceed \$2,000 and in criminal matters.

Surrogate Courts (SA 1967, c. 79).—The Surrogate Courts Act provides for the formation of two courts of record—the Surrogate Court of Northern Alberta and the Surrogate Court of Southern Alberta. The chief judges and other judges of the District Courts of Northern and Southern Alberta are named as the chief judges and other judges of the respective Surrogate Courts. The Surrogate Courts have jurisdiction in all matters relating to probate and guardianship.

Magistrates' Courts (RSA 1955, c. 186).—Magistrates are appointed by the Lieutenant-Governor in Council and are authorized to exercise the jurisdiction conferred upon a magistrate by Part XVI of the Criminal Code and have jurisdiction under the Small Claims Act in actions for debt not exceeding \$500 and wage claims not exceeding six months wages.

Justices of the Peace (RSA 1955, c. 186).—Justices of the peace are appointed by the Lieutenant-Governor in Council and have limited jurisdiction in criminal matters.

Juvenile Courts (RSA 1955, c. 166).—The Juvenile Court Act provides for the establishment of the Juvenile Court of the Province of Alberta and every judge of the Supreme Court, every judge of the District Court and every magistrate is *ex officio* a judge thereof and a justice of the peace may act on written request. A juvenile court has jurisdiction to hear and determine offences charged against children under any statute of the province and, in addition, is a juvenile court for the purposes of the federal Juvenile Delinquents Act.

Family Courts (RSA 1955, c. 108).—The Family Court Act provides that there shall be a family court for the province and the Lieutenant-Governor in Council may appoint any magistrate as a judge of such court. Family courts provide counselling service for families with domestic problems; have jurisdiction under the Domestic Relations Act to grant a maintenance order on behalf of a deserted wife and her family or on behalf of the children only; and also adjudicate in matters of non-support, common assault where a

husband assaults a wife, a wife assaults a husband, or a parent assaults a child, pursuant to the provisions of the Criminal Code, as well as any charge against an adult under the provisions of the Child Welfare Act.

British Columbia.—*Court of Appeal* (RSBC 1960, c. 82).—The Court of Appeal consists of a chief justice, called the Chief Justice of British Columbia, and eight other judges called Justices of Appeal. All are appointed by the Governor in Council. The Court exercises general appellate jurisdiction.

Supreme Court (RSBC 1960, c. 374).—The Supreme Court consists of a chief justice, called the Chief Justice of the Supreme Court, and 16 other judges called Judges of the Supreme Court. All are appointed by the Governor in Council. The Court has unlimited original jurisdiction in civil and criminal matters throughout the province.

County Courts (RSBC 1960, c. 81).—There are eight counties in British Columbia with a county court for each county and one or more judges for each county court, all appointed by the Governor in Council. Each county court has jurisdiction in all matters where the claim does not exceed \$3,000 generally, and in some cases up to \$5,000, and has jurisdiction in criminal and probate matters. The courts have no jurisdiction in certain types of personal actions such as libel, slander or breach of promise of marriage.

Provincial Court (SBC 1969, c. 28).—Effective Aug. 1, 1969, the Provincial Court of British Columbia came into being. Under this legislation all persons who were at that time magistrates or justices of the peace became either judges of the Provincial Court or justices of the peace as the case may be. The Court has three divisions—the ordinary or Criminal Division, the Family Court Division, and the Small Claims Division. All judges have jurisdiction in all divisions of the Court with province-wide territorial jurisdiction and with authority to deal with all matters formerly within the jurisdiction of magistrates, judges of the Family and Children's Court, and Small Debts Courts. In the Small Claims Division (formerly Small Debts Courts), the monetary limitation is \$500 and an appeal lies to the nearest county court or to a judge of the Supreme Court. Judges of the Provincial Court and justices of the peace are appointed by the Lieutenant-Governor in Council. Judges of the Provincial Court have jurisdiction for the purposes of the federal Juvenile Delinquents Act, and also jurisdiction under the provincial Protection of Children Act, the Landlord and Tenant Act, and the Summary Convictions Act.

Yukon and Northwest Territories.—The Yukon Act and the Northwest Territories Act each provide for a superior court of record called the Territorial Court, consisting of one or more judges appointed by the Governor in Council. The Court of Appeal for the Northwest Territories consists of justices of the Alberta Court of Appeal and the Yukon Territorial Court judge. The Court of Appeal for the Yukon Territory consists of the justices of the British Columbia Court of Appeal and the Northwest Territories Territorial Court judge. After the Territories assume administration of justice on Apr. 1, 1971, the Commissioners in Council of both Territories will have the power to appoint coroners, magistrates, justices of the peace and other court officials, leaving only judges of Superior Court rank to be appointed by the Governor in Council. The Attorney General of Canada, however, remains the Attorney General of the Yukon Territory and the Northwest Territories.

Salaries, Allowances and Pensions of Judges

Sect. 100 of the British North America Act provides that the "Salaries, Allowances, and Pensions of the Judges of the Superior, District, and County Courts (except the Courts of Probate in Nova Scotia and New Brunswick) and of the Admiralty Courts in Cases where the Judges thereof are for the Time being paid by Salary, shall be fixed and provided by the Parliament of Canada". These are provided by the Judges Act.

The salary of the Chief Justice of Canada is \$40,000 per annum and the salaries of the puisne judges of the Supreme Court of Canada are \$35,000 per annum. The salary of the President of the Exchequer Court of Canada is \$32,000 per annum and the salaries of the puisne judges are \$28,000 per annum. The salaries of the various district judges in admiralty, who are usually judges of other superior courts, are as follows: Quebec, \$1,500; Nova Scotia, \$1,000; New Brunswick, \$1,000; Prince Edward Island, \$800; British Columbia, \$1,500; Ontario, \$1,500; and there are three district judges of the Admiralty District of Newfoundland, each of whom receives a salary of \$333.33 per annum. The district judge of the Admiralty District of Manitoba receives no salary.

All chief justices of provincial superior courts and the associate chief justice of the Superior Court of Quebec receive salaries of \$30,000 per annum; the puisne judges of these courts and the two territorial courts receive salaries of \$26,000 per annum. The chief judges, judges and junior judges of all county and district courts receive salaries of \$19,000 per annum.

On Mar. 1, 1967, the Judges Act was amended to provide that under certain conditions every judge who is in receipt of a salary under the Judges Act, except District Judges in Admiralty, shall be paid an additional salary of \$2,000 per annum as compensation for any extra-judicial services that he may be called upon to perform by the Government of Canada or the government of a province, and for the incidental expenditures that the fit and proper execution of his office as judge may require and, in the case of the judge of the territorial courts of the Yukon Territory and the Northwest Territories, as a northern allowance.

Travelling Allowances.—The Judges Act provides that a judge of a superior or county court or a district judge in admiralty who, for the purpose of performing any function or duty as such judge, attends at any place other than that at which or in the immediate vicinity of which he is by law obliged to reside is entitled to be paid, as a travelling allowance, his moving or transportation expenses and reasonable travelling and other expenses incurred by him in so attending. If a judge uses his personal automobile because of the lack of good public transportation facilities, he is paid a mileage allowance.

Annuities.—Judges' annuities are non-contributory and the statutory retirement age is 75 years. The Governor in Council may grant to (1) a judge who has continued in judicial office for at least 15 years and has attained the age of 70 years, if he resigns his office, (2) a judge who has continued in judicial office for at least 15 years, if he resigns his office and in the opinion of the Governor in Council the resignation is conducive to the better administration of justice or is in the national interest, (3) a judge who has become afflicted with some permanent infirmity disabling him from the due execution of his office, if he resigns his office or by reason of such infirmity is removed from office, or (4) a judge who ceases to hold office by reason of his having attained the age of 75 years, if he has held judicial office for at least 10 years or if he held judicial office on the day this section came into force (Aug. 10, 1960), an annuity not exceeding two thirds of the salary annexed to the office held by him at the time of his resignation, removal or ceasing to hold office, as the case may be. An annuity granted to a judge shall commence on the day of his resignation, removal or ceasing to hold office and shall continue during his natural life.

The Governor in Council may grant to the widow of a judge who dies while in office an annuity not exceeding two ninths of the salary of the judge at the date of his death, to commence immediately after the death of the judge and to continue thenceforth during her natural life. Where a judge who was granted an annuity upon his retirement dies, the Governor in Council may grant to the widow an annuity not exceeding one third of the annuity that was granted to him. Two ninths of salary and one third of annuity are the same amount in dollars. An annuity granted to the widow of a judge ceases upon her remarriage. No annuity may be granted if the widow married the judge after he ceased to hold office.

Section 2.—Provincial and Territorial Governments*

In each of the provinces, The Queen is represented by a Lieutenant-Governor appointed by the Governor General in Council. The Lieutenant-Governor acts on the advice and with the assistance of his Ministry or Executive Council which is responsible to the Legislature and resigns office under circumstances similar to those described on p. 70 concerning the Federal Government.

The Legislature of each province is unicameral, consisting of the Lieutenant-Governor and a Legislative Assembly. The Legislative Assembly is elected by the people for a statutory term of five years but may be dissolved within that period by the Lieutenant-Governor on the advice of the Premier of the province.

The source of legislative authority of the Provincial Legislatures is the British North America Act, 1867 (Br. Stat. 1867, c. 3 and amendments). Under Sect. 92 of the Act, the Legislature of each province exclusively may make laws in relation to the following matters: amendment of the constitution of the province except as regards the Lieutenant-Governor; direct taxation within the province; borrowing of money on the credit of the province; establishment and tenure of provincial offices and appointment and payment of provincial officers; the management and sale of public lands belonging to the province and of the timber and wood thereon; the establishment, maintenance and management of public and reformatory prisons in and for the province; the establishment, maintenance and management of hospitals, asylums, charities and eleemosynary institutions in and for the province, other than marine hospitals; municipal institutions in the province; shop, saloon, tavern, auctioneer and other licences issued for the raising of provincial or municipal revenue; local works and undertakings other than interprovincial or international lines of ships, railways, canals, telegraphs, etc., or works which, although wholly situated within one province, are declared by the Federal Parliament to be for the general advantage either of Canada or of two or more provinces; the incorporation of companies with provincial objects; the solemnization of marriage in the province; property and civil rights in the province; the administration of justice in the province including the constitution, maintenance and organization of provincial courts both of civil and of criminal jurisdiction including procedure in civil matters in these courts; the imposition of punishment by fine, penalty or imprisonment in enforcing any law of the province relating to any of the aforesaid subjects; generally all matters of a merely local or private nature in the province.

Further, in and for each province the Legislature exclusively may, under Sect. 93, make laws in relation to education subject to certain restrictions relating to the establishment of schools by religious minorities. These powers with similar restrictions were conferred on the more recently admitted provinces on their inclusion in the federation.

The Provincial Legislatures may also make laws under Sect. 95 in relation to agriculture and immigration, subject to any laws of the Parliament of Canada in relation to these subjects.

Provincial Franchise.—Details regarding qualifications and disqualifications of the franchise are contained in the Elections Act of each province. In general, every person, male or female, at a specified age (18 to 21 years) who is a Canadian citizen or (in certain provinces) other British subject, who complies with certain residence requirements in the province and the electoral district of polling and who falls under no statutory disqualifications, is entitled to vote. Voting privileges are given to persons in Prince Edward Island, Quebec, Manitoba and Saskatchewan at the age of 18, in Newfoundland, Alberta and British Columbia at 19 years, and in the remaining provinces at 21 years.

* Except where indicated, the information given in this Section is brought up to May 1, 1970. Any important changes occurring between that date (or the date given) and the time of going to press will be found in an Appendix to this volume.

Subsection 1.—Newfoundland

The Government of Newfoundland consists of a Lieutenant-Governor, an Executive Council and a Legislative Assembly. The Legislative Assembly has 42 members elected for a term of five years. The Legislature elected Sept. 8, 1966 is the 34th in the history of Newfoundland and the 6th since Confederation. Lieutenant-Governors from the date of Confederation, Mar. 31, 1949, to 1968 are cited in the 1969 Year Book, p. 80; since Apr. 2, 1969, the position has been held by the Hon. E. John A. Harnum. The first Ministry, formed on July 13, 1949 under the leadership of the Hon. Joseph R. Smallwood, was still in office on May 1, 1970.

The Premier receives a salary of \$12,000 and the other Cabinet Ministers \$11,000 per annum, plus a sessional indemnity of \$5,666.67 and a travelling and expense allowance of \$2,833.33. Each member of the House of Assembly receives a sessional indemnity of \$5,666.67 plus a travelling and expense allowance of \$2,833.33. The Leader of the Opposition receives an additional allowance of \$5,000.

Subsection 2.—Prince Edward Island

The Government of Prince Edward Island consists of a Lieutenant-Governor, an Executive Council and a Legislative Assembly. Lieutenant-Governors from Confederation (1873) to 1959 are cited in the 1960 Year Book, p. 105; since that date, the position has

been held by the Hon. F. W. Hyndman, appointed effective Mar. 31, 1958, followed by the Hon. W. J. MacDonald, appointed effective Aug. 1, 1963, and the Hon. J. George MacKay, appointed effective Oct. 6, 1969.

The Legislative Assembly elected May 11, 1970 is the 52nd in the history of Prince Edward Island Legislatures and the 27th since Confederation. It has 32 members from 16 electoral districts who may serve for a statutory term of five years. Each district elects one Councillor and one Assemblyman. Premiers from Confederation to 1959 are listed in the 1960 Year Book, p. 105. The Hon. Walter R. Shaw was Premier from Sept. 16, 1959 until the present Premier took office following the General Election of May 30, 1966.

The annual salary of the Premier is \$9,000, of a Cabinet Minister \$6,000 and of a Minister without Portfolio \$3,600. A member of the Assembly receives \$2,666.67 for each regular session attended by him and an additional amount of \$1,333.33, tax-free, for travelling and other expenses incurred in connection with session attendance and representing his district; the Speaker of the Assembly receives a further additional sum of \$1,000 and an additional amount of \$500, tax-free, for travelling and other expenses incurred in connection with his official duties for each session; to cover like expenditures the Deputy Speaker receives a further additional sum of \$600 and an additional amount of \$300, tax-free, and the Leader of the Opposition a further additional sum of \$1,666.67 and an additional amount of \$833.33, tax-free. Payment for indemnity for travelling and other expenses incurred by a member of the Legislature, the Speaker, the Deputy Speaker and the Leader of the Opposition accrue from his election to the Legislature and are paid monthly. No sessional indemnity or expenses are paid for any special session of the Legislature.

15.—Legislatures of Prince Edward Island, 1955-70, as at June 25, 1970

NOTE.—Legislatures from Confederation to 1923 are given in the 1924 Year Book, p. 75; for 1924-35 in the 1938 edition, p. 110; and for 1936-47 in the 1963-64 edition, p. 82.

Subsection 3.—Nova Scotia

The Government of Nova Scotia consists of a Lieutenant-Governor, an Executive Council and a House of Assembly. Lieutenant-Governors from Confederation (1867) to 1959 are cited in the 1960 Year Book, p. 106; since that date the position has been held by Maj.-Gen. the Hon. E. C. Plow, commissioned to office Sept. 1, 1958, followed by the Hon. H. P. MacKeen, commissioned to office Mar. 1, 1963, and the Hon. Victor deB. Oland, commissioned to office July 22, 1968.

The Legislature has 46 members elected for a maximum term of five years. The Legislature elected May 30, 1967 is the 49th in Nova Scotia's history and the 26th since Confederation. Premiers from Confederation to 1959 are listed in the 1960 Year Book, p. 107; the Hon. R. L. Stanfield was the Premier at that time and held office until 1967 when the present Premier assumed office.

The Premier of the province receives a salary of \$18,500 per annum and each Cabinet Minister a salary of \$16,500 per annum. Each member of the House of Assembly receives a sessional indemnity of \$5,000 and an allowance of \$2,500 for expenses incidental to the discharge of his duties. The Leader of the Opposition receives an allowance of \$16,500 in addition to his sessional indemnity.

17.—Legislatures of Nova Scotia, 1955-70, as at May 1, 1970

NOTE.—Legislatures from Confederation to 1923 are given in the 1924 Year Book, p. 76; for 1924-33 in the 1933 edition, p. 111; and for 1933-49 in the 1963-64 edition, p. 83.

Date of Election	Legislature	Number of Sessions	Date of First Opening	Date of Dissolution

Subsection 4.—New Brunswick

The Government of New Brunswick has a Lieutenant-Governor, an Executive Council and a House of Assembly. Lieutenant-Governors since Confederation (1867) to 1959 are cited in the 1960 Year Book, p. 108; since that date, the position has been held by the Hon. J. Leonard O'Brien, appointed June 6, 1958, followed by the Hon. John B. McNair, appointed June 9, 1965, and the Hon. W. S. Bird, appointed Feb. 1, 1968.

The Legislature elected Oct. 23, 1967 is the 46th in New Brunswick's history and the 19th since Confederation. It has 58 members who are elected for a statutory term of five years. Premiers from Confederation to 1959 are listed in the 1960 Year Book, p. 108; the present Premier assumed office in 1960.

The Premier receives \$20,000 per annum in addition to the salary for any other portfolio he may hold. The salary of each Cabinet Minister is \$12,000 and the amount paid as indemnity to each member of the House of Assembly is \$5,000 plus an additional \$2,500 allowance for expenses. The Leader of the Opposition receives an additional \$8,000 and the Speaker receives an allowance of \$1,000 in addition to the regular indemnity.

19.—Legislatures of New Brunswick, 1955-70, as at May 1, 1970

NOTE.—Legislatures from Confederation to 1923 are given in the 1924 Year Book, p. 77; for 1924-35 in the 1938 edition, p. 112; and for 1936-48 in the 1963-64 edition, p. 84.

Subsection 5.—Quebec

The Government of Quebec consists of a Lieutenant-Governor, an Executive Council and a National Assembly. The Legislative Council—the upper chamber of the Quebec Government for 101 years—was abolished by Act of the Quebec Legislature on Nov. 29, 1968, effective Dec. 31, 1968, and by the same Act the name of the Legislative Assembly was changed to “National Assembly of Quebec”.

Lieutenant-Governors from Confederation (1867) to 1959 are cited in the 1960 Year Book, p. 109; since that date the position has been held by the Hon. Onésime Gagnon, commissioned to office Feb. 14, 1958, followed by the Hon. Paul Comtois, commissioned to office Oct. 6, 1961, and the Hon. Hugues Lapointe, commissioned to office Feb. 22, 1966.

The National Assembly has 108 members elected for a maximum period of five years. Prime Ministers of Quebec from Confederation to 1959 are listed in the 1960 Year Book, p. 110; the Hon. Jean Lesage became Prime Minister in 1960, the Hon. Daniel Johnson in 1966, the Hon. Jean-Jacques Bertrand in 1968 and Mr. Robert Bourassa on Apr. 29, 1970.

21.—Legislatures of Quebec, 1955-70, as at June 9, 1970

NOTE.—Legislatures from Confederation to 1923 are given in the 1924 Year Book, p. 78; for 1924-35 in the 1938 edition, p. 113; and for 1936-48 in the 1963-64 edition, p. 85.

Health.....	ROBERT QUENNEVILLE.....	May 12, 1970
Industry and Commerce.....	CLAUDE SIMARD.....	May 12, 1970

Each member of the National Assembly receives a sessional indemnity of \$12,000 and an expense allowance of \$6,000. In addition to this indemnity and allowance, the Prime Minister receives an annual salary of \$16,000, a representation allowance of \$4,000 and a housing allowance of \$2,000; members of the Cabinet receive an annual allowance of \$12,000 and a supplement of \$3,000 in the form of representation allowance. Ministers without Portfolio receive an annual indemnity of \$10,000 with a representation allowance of \$3,000. The Chief Whip and Parliamentary Assistants receive an annual indemnity of \$3,000 and a representation allowance of \$1,000. The Speaker of the National Assembly receives an indemnity of \$10,000, a representation allowance of \$2,000 and a housing allowance of \$1,000; the Deputy Speaker receives an indemnity of \$5,000 and a representation allowance of \$1,000. The Leader of the Opposition receives an indemnity of \$10,000, a representation allowance of \$3,000 and a housing allowance of \$2,000.

Subsection 6.—Ontario

The Government of Ontario consists of a Lieutenant-Governor, an Executive Council and a House of Assembly. Lieutenant-Governors from Confederation (1867) to 1959 are cited in the 1960 Year Book, p. 112; since that date the position has been held by the Hon. Justice John Keiller Mackay, appointed effective Dec. 30, 1957, followed by the Hon. William Earl Rowe, appointed effective May 1, 1963, and the Hon. W. Ross Macdonald, appointed effective July 4, 1968.

The House of Assembly, the single-chamber Legislature of the province, is composed of 117 members elected for a statutory term of five years. Prime Ministers from Confederation to 1959 are listed in the 1960 Year Book, p. 112; the Hon. John Parmenter Roberts became Ontario's Prime Minister on Nov. 8, 1961 upon the resignation of the Hon. Leslie M. Frost, Prime Minister from May 4, 1949.

Besides the regular departments of government, the Niagara Parks Commission, the Ontario Municipal Board, The Hydro-Electric Power Commission of Ontario, the Ontario-St. Lawrence Development Commission, the Ontario Northland Transportation Commission, the Liquor Control Board, the Liquor Licence Board, the Hospital Services Commission and The Water Resources Commission are in operation.

23.—Legislatures of Ontario, 1955-70, as at May 1, 1970

NOTE.—Legislatures from Confederation to 1923 are given in the 1924 Year Book, p. 79; for 1924-34 in the 1938 edition, p. 114; and for 1935-50 in the 1963-64 edition, p. 87.

¹ Life of Legislature not expired at May 1, 1970.

Under the provisions of the Legislative Assembly Act (RSO 1960, c. 208 as amended) each member of the Assembly is paid an annual indemnity of \$12,000 and an allowance for expenses at the rate of \$6,000. In addition, the Speaker receives a special indemnity at the annual rate of \$5,000; the Chairman of the Committee of the Whole a special indemnity at the annual rate of \$4,000; and the Leader of the Opposition a salary of \$15,000 per annum in addition to his indemnity as a member. Each member of the Cabinet having charge of a department receives the ordinary indemnity as a member of the Legislature in addition to his salary as a Minister of the Crown. The salary provided in the Executive Council Act for the Prime Minister is \$20,000 and for a Cabinet Minister having charge of a department \$15,000. By the 1956 amendment, Ministers of the Crown who are in charge of de-

partments, the Minister of the Crown who is a member of The Hydro-Electric Power Commission of Ontario, and the Leader of the Opposition receive a representation allowance of \$2,000 per annum. Each Minister without Portfolio, other than the Minister who is a member of The Hydro-Electric Power Commission, receives \$5,000 salary and \$1,000 representation allowance per annum.

24.—Seventeenth Ministry of Ontario, as at May 1, 1970

(Party standing at latest General Election, Oct. 17, 1967: 69 Progressive Conservative, 28 Liberal and 20 New Democratic Party.)

NOTE.—Ministers are shown at date of original appointment as a Minister and at date of appointment to present portfolio, despite the formation of a new Ministry consequent upon the appointment of a new Prime Minister.

Subsection 7.—Manitoba

In addition to a Lieutenant-Governor, Manitoba has an Executive Council at present composed of 13 members and a Legislative Assembly of 57 members elected for a statutory term of five years. Lieutenant-Governors from Confederation (1870) to 1959 are cited in the 1960 Year Book, p. 113; since that date, the position has been held by the Hon. Errick F. Willis, sworn in on Jan. 15, 1960, followed by the Hon. Richard S. Bowles, sworn in on Sept. 1, 1965.* Premiers since Confederation are listed in the 1960 Year Book, p. 114; the Hon. Dufferin Roblin, who became Premier on June 30, 1958, remained in office until Nov. 27, 1967, was succeeded by the Hon. Walter Weir who remained in office until July 15, 1969, when the present Premier assumed office.

The Premier of the province is paid a salary of \$16,600 per annum and each of the other members of the Cabinet \$15,600. Members of the Legislature are each paid a sessional indemnity of \$4,800 and a tax-free expense allowance of \$2,400 plus an allowance of \$20 a day for a period of 60 days continuous sitting including Saturdays and Sundays for members outside Metro Winnipeg who have to take board and lodging in Winnipeg during legislative sessions. The Leader of the Opposition is paid \$15,600 and the Speaker of the Legislature receives \$9,600, which is an amount equal to double the indemnity of an individual member.

* Retirement of the Hon. Mr. Bowles was announced in July 1970; William John McKeag was named as his successor, to take office in September 1970.

25.—Legislatures of Manitoba, 1955-70, as at May 1, 1970

NOTE.—Legislatures from Confederation to 1923 are given in the 1924 Year Book, p. 80; for 1924-36 in the 1938 edition, p. 115; and for 1937-49 in the 1963-64 edition, p. 88.

Subsection 8.—Saskatchewan

The Government of Saskatchewan consists of a Lieutenant-Governor, an Executive Council and a Legislative Assembly. Lieutenant-Governors from Confederation (1905) to 1959 are cited in the 1960 Year Book, p. 115; since that date the office has been held by the Hon. F. L. Bastedo, commissioned to office Jan. 27, 1958, the Hon. Robert L. Hanbidge, commissioned to office Mar. 1, 1963, and the Hon. Stephen Worobetz, commissioned to office Feb. 3, 1970.

The statutory number of members of the Legislative Assembly is 59, elected for a maximum term of five years. Premiers from Confederation to 1959 are listed in the 1960 Year Book, p. 115; the Hon. W. S. Lloyd became Premier in 1961 and the Hon. W. Ross Thatcher in 1964.

The Premier receives \$18,500 and each Cabinet Minister \$13,500 annually in addition to a sessional indemnity. The Leader of the Opposition receives \$13,500 plus an office allowance of \$17,500 per annum, the Speaker \$4,500 and the Deputy Speaker \$2,500. The sessional indemnity of a member of the Legislature is \$6,000 together with an expense

allowance of \$3,000. Each of the members for the three northernmost constituencies of Prince Albert East, Cumberland, Athabasca and Meadow Lake receives a \$6,000 sessional indemnity and a \$3,500 expense allowance.

27.—Legislatures of Saskatchewan, 1955-70, as at May 1, 1970

NOTE.—Legislatures from Confederation to 1923 are given in the 1924 Year Book, p. 81; for 1924-34 in the 1938 edition, p. 116; and for 1935-48 in the 1963-64 edition, p. 89.

Subsection 9.—Alberta

The Government of Alberta is composed of a Lieutenant-Governor, an Executive Council and a Legislative Assembly. Lieutenant-Governors from Confederation (1905) to 1959 are listed in the 1960 Year Book, p. 116; since that date the office has been held by the Hon. J. Percy Page, commissioned to office Dec. 19, 1959, followed by the Hon. J. W. Grant MacEwan, commissioned in January 1966.

There are 65 members in the Legislative Assembly, elected for a maximum period of five years. Premiers from Confederation to 1959 are listed in the 1960 Year Book, p. 117; the Hon. Ernest C. Manning, the Premier at that time, resigned in 1968.

Each member of the Legislative Assembly (except the Speaker, the Deputy Speaker and the Leader of the Opposition) receives a sessional indemnity of \$4,800 plus \$2,400 expense allowance plus \$15 for each day during the session when the member is necessarily absent from his ordinary place of residence, both tax-free. The Speaker's sessional indemnity is \$8,000 plus \$4,000 expense allowance, the Deputy Speaker's sessional indemnity

is \$6,400 plus \$3,200 expense allowance, and the Leader of the Opposition's sessional indemnity is \$7,200 plus \$3,600 expense allowance. Each also receives \$15 for each day during the session when he is necessarily absent from his ordinary place of residence. The Premier, in addition to the sessional indemnity, receives \$18,000 and each of the other Ministers receives \$15,000.

29.—Legislatures of Alberta, 1955-70, as at May 1, 1970

NOTE.—Legislatures from Confederation to 1923 are given in the 1924 Year Book, p. 82; for 1924-34 in the 1938 edition, p. 117; and for 1935-48 in the 1963-64 edition, p. 90.

Subsection 10.—British Columbia

The Government of British Columbia has a Lieutenant-Governor, an Executive Council and a Legislative Assembly. Lieutenant-Governors from Confederation (1871) to 1959 are cited in the 1960 Year Book, p. 118; since that date the position has been held by Maj. Gen. the Hon. George Randolph Pearkes, commissioned to office Oct. 12, 1960, followed by Col. the Hon. J. R. Nicholson, commissioned to office on July 2, 1968.

The Legislative Assembly, elected for a statutory term of five years, has 55 members. Premiers from Confederation to 1959 are cited in the 1960 Year Book, p. 118; the present Premier assumed office in 1952.

Each member of the Executive Council and the Legislative Assembly receives a sessional allowance of \$5,000 and \$2,500 for expenses. There is also paid to each member a living allowance of \$2,000 (based on a per diem rate of \$50, not exceeding 40 days) and

each member receives an allowance of 25 cents per mile of the distance between his place of residence and the city of Victoria, reckoning such distance, going and coming, according to the nearest mail route. Each member also receives an allowance of \$500 for telegraph and telephone expenses. In addition, the Premier receives a salary of \$23,000, each member of the Executive Council with a portfolio receives \$20,000 annually and each member of the Executive Council without portfolio receives \$6,500. The Leader of the Opposition receives a special allowance of \$9,000 for expenses, the Speaker receives a special allowance of \$9,000 and the Deputy Speaker a special allowance of \$3,500.

31.—Legislatures of British Columbia, 1955-70, as at May 1, 1970

NOTE.—Legislatures from Confederation to 1923 are given in the 1924 Year Book, p. 83; for 1924-37 in the 1938 edition, p. 118; and for 1938-52 in the 1963-64 edition, p. 91.

Subsection 11.—Yukon Territory and Northwest Territories

Yukon Territory*

The Yukon was established as a separate territory in 1898 to meet a need for local government created by the influx of miners during the gold-rush period. The Yukon Territory Act provided for a Commissioner and a Council of not more than six, all appointed by the Governor in Council. The Commissioner in Council was given legislative powers comparable to those held by the Lieutenant-Governor and the Legislative Assembly of the Northwest Territories. By 1902, five elected councillors had been added and in 1908 a fully elected Council of ten members was introduced. A population decline following the end of the gold rush was accelerated by enlistment during World War I and in 1919 the Council was reduced to three elected members. This remained the level of government until after World War II when population and economic activity again showed an increase, beginning with the building of the Alaska Highway. In 1960, the Council was increased to seven elected members and provision was made for the appointment of an Advisory Committee on Finance.

Basic Legislation.—A principal feature of territorial government is its very close constitutional and working relationship with the Government of Canada. Although the provinces and the Federal Government each has jurisdiction and powers allocated by the British North America Act, the authority of the Territorial Government is allocated only by federal legislation. The Yukon Act prescribes the structure of the executive, legislative and judicial branches of the Territorial Government and the scope of their authority; all residual matters remain under federal control. The Territory has fully representative but not responsible government. Under authority of the Act, Whitehorse, the single large community in the Territory, was designated as the seat of government in 1953.

The Government Organization Act, 1966, which describes the responsibilities of the Department of Indian Affairs and Northern Development for the development of Northern Canada, is the other piece of basic legislation under which the Territorial Government operates. The Minister is responsible for the management of the natural resources (except game) and for the development of the North generally. Although he shares authority with the Governor in Council for directing the Commissioner in his duties, he is the effective link between the Territorial and Federal Governments.

The Executive.—The executive side of the Territorial Government is headed by a Commissioner appointed by the Federal Government. He is directed to administer the Government of the Territory under instruction from the Governor in Council or the Minister of Indian Affairs and Northern Development. In practice, the Commissioner is much more responsive to the wishes of his elected Council than the Yukon Act implies and he cannot spend any territorial funds which have not been voted by Council. There is also a growing body of other territorial legislation (Ordinances) on which the Commissioner is required to obtain Council approval for specific actions; actually, he never acts on any major issue without consulting Council.

Because the Commissioner does not sit with Council, there is no formal integration of the executive and legislative functions of government at Council sessions. In 1960, an amendment to the Yukon Act was designed to bridge this gap by providing for the formation of an Advisory Committee on Finance. The Committee consists of three members of Council appointed by the Commissioner on the advice of Council, with whom the Commissioner is required to consult in the preparation of his estimates of expenditures and appropriations. By its own choice, Council has made membership on the Committee rotational by replacing one member each year. A more recent development to fuse the executive and legislative functions of government was announced by the federal Minister of Indian Affairs and Northern Development in late 1969. The Minister proposed the

* Revised under the direction of the Commissioner of the Yukon Territory, Whitehorse.

formation of an Executive Committee to be composed of the Commissioner as chairman, his two Assistant Commissioners as appointed members and two members of Council appointed by the Commissioner on the advice of Council. It is intended, moreover, that the two Council members of the Committee will also be members of the Advisory Committee on Finance, leaving a third member to be appointed by Council in the usual manner. These changes are to take place if approved by the new Council when it assumes office in the autumn of 1970.

Below the Commissioner's office, the Territorial Public Service is organized into eight conventional administrative departments under the direction of the Commissioner; all are located in Whitehorse. Territorial Government administration is represented in outlying communities by a limited number of territorial agents who are concerned mainly with the sale of liquor and licences but most territorial services are administered from Whitehorse. Health facilities are administered mainly by the federal Department of Health and Welfare. Federal involvement in the operation of health services in the Territory stems from its responsibility for Indians and from practical administrative considerations. All schools are under the direction of the Territorial Department of Education with headquarters in Whitehorse. The Territorial Government has well-developed engineering and welfare services. The Territorial Public Service numbers about 900 persons, including some 250 school teachers and vocational school instructors.

Some administrative areas such as natural resources, which are the responsibility of the Department of Indian Affairs and Northern Development, are administered by federal public servants. The Commissioner, in addition to his territorial role, is also the Department's senior federal representative in the Territory. Because the Minister of Justice is the Attorney General of the Territory for purposes of the Criminal Code of Canada, the administration of justice in the Territory is still provided, at direct federal expense, by the Department of Justice and the Royal Canadian Mounted Police. Recent amendments to the Yukon Act provide for the administration of justice to be transferred from the Federal Government to the Territorial Government. Moreover, in a manner similar to arrangements made with provincial governments, the Territorial Government will in future negotiate its own police contract with the Royal Canadian Mounted Police. The Attorney General of Canada, however, will remain Attorney General of the Yukon Territory. The court system is described on p. 106.

The Legislature.—The Legislative Council consists of seven members elected for a term of three years. Three of the members represent electoral districts located in or close to Whitehorse where about half of the some 15,000 residents of the Territory live. As in many other matters, a federal agency (Chief Electoral Officer) conducts the territorial elections as a free service to the Territory. Council normally meets in session twice each year. The first session commences in March and has as a major part of its work the voting of the main territorial estimates which have been prepared by the Commissioner and agreed to by its Advisory Committee on Finance and the Minister. The second session is usually called in November and special sessions can be held at any time. Main sessions last from one to two months and the debates are recorded verbatim and published under the title of *Votes and Proceedings*. The Commissioner calls Council into session and prorogues it; he sits with it only by invitation to explain or defend a proposed expenditure, draft legislation or policy papers which he has placed before Council. All sessions are presided over by a Speaker who is appointed by Council from among its members for the duration of each Council but is given no specific responsibilities or authority under the Yukon Act. In practice, he conducts Council proceedings under Rules of Council which are an adaptation of Canadian parliamentary procedures. A Clerk of Council controls the administrative side of its proceedings.

The matters on which Council can legislate are not significantly fewer than those enjoyed by the provinces. The main exceptions concern natural resources. These are a responsibility of the Federal Government which has to provide the heavy investments in

transportation and other facilities needed to bring them into production. Most major policy matters are first placed before Council in the form of a Sessional Paper prepared by the Commissioner, and the draft legislation is then presented at the next session in the form of a Bill, although amendments to existing legislation may be processed concurrently with the Sessional Paper or without the assistance of this background information. Discussion is conducted usually with the Council resolved into Committee of the Whole when the Commissioner, heads of departments and outside specialists appear to give detailed information and advice on the subject concerned. Bills are given three readings and require the assent of the Commissioner before they become law as Ordinances of the Territory. The Commissioner can reserve assent to legislation but rarely does so. As with provincial legislation, the Federal Government may disallow any Ordinance but within a period of one year. New Ordinances are published after each session; Consolidated Ordinances of the Yukon Territory are usually revised every ten years.

The Role of the Federal Government.—Direct federal involvement in the affairs of the Territorial Government extends from control of its constitution to responsibility for the operation of certain provincial-type services and for providing most of its finances. The constitutional arrangement has been described, as have some of the federally operated provincial-type services, e.g., justice and law enforcement and the health services. Beyond these special services, the Federal Government provides the usual range of national services such as the operation of Canadian Broadcasting Corporation radio stations, mail delivery and mainline airports. Full assistance under all national welfare programs is available in the Territory. Even with special financial assistance in many particular areas, the low volume of local revenues falls far short of meeting the high cost of services provided by the Territorial Government. The Federal Government picks up this financial deficit through annual fiscal arrangements known as Federal-Territorial Financial Agreements. The amount of federal financial assistance given to the Territorial Government is simply the difference between the forecast of revenues available to the Territorial Government and the forecast of the cost of a reasonable level of services to be provided by that Government. In the process, the Territorial Government forgoes its authority to tax private and corporate incomes and to collect other corporation taxes and succession duties.

Setting aside special accounts such as housing loans and amortization of borrowings from the Federal Government for which individual arrangements are made, the Yukon Government in the year ended Mar. 31, 1970, spent an estimated \$13,500,000 on operational account and another \$7,400,000 on capital account. Of the total expenditure estimated at \$20,900,000, the Territorial Government raised about \$4,700,000 locally and recovered another \$3,500,000 from the Federal Government via shared-cost programs. The remainder was provided by the Federal Government under its financial agreement with the Territory.

Yellowknife is the seat of government of the Northwest Territories. Since 1963, operational responsibility for government services, most of which were previously administered by the Federal Government at Ottawa, has been transferred gradually to Territorial control.

Northwest Territories*

The Temporary Government Act of 1869 was the first legislation by the Federal Government to establish government in the newly acquired Rupert's Land and North-Western Territory. However, functional territorial government really dates from the North-West Territories Act of 1875. The creation of the Provinces of Saskatchewan and Alberta in 1905 and the adjustment of the northern boundaries of the Provinces of Manitoba, Ontario and Quebec by 1912 pushed the Territories north of the 60th parallel. The 1905 legislation provided for a federally appointed Commissioner with wide executive and legislative powers and a Council of four but no Councillors were appointed for 16 years. In 1921 the Council was expanded to six members and, until 1946 when the first territorial resident was appointed, it was comprised entirely of senior federal officials.

Defence early warning systems, radio and greatly improved air transportation after World War II ended the extreme isolation of the North and pressures for improved territorial government soon followed. Legislative changes in 1951 and 1952 increased Council membership to eight, three of them elected from the Mackenzie District. A fourth was added in 1954. At least two Council sessions were required to be held in a year; one in the Territories and all others at the seat of government in Ottawa. The subjects on which the Commissioner in Council could legislate were increased to approximate those of the provincial legislatures except that natural resources (other than game) were reserved to the Federal Government. A Territorial Court was established.

Recent Constitutional Developments.—The quickening of federal interest in the North in the 1950s and 1960s stimulated concern and effort to arrange for a resident territorial government and to chart the course of its future development. An amendment to the Northwest Territories Act in 1966 created three new electoral districts in the Eastern

* Revised by the Commissioner of the Northwest Territories, Yellowknife.

Arctic and, for the first time, gave elected representation to all residents of the Territories. Also, at the ensuing election the first Eskimo was elected to the Territorial Council. A separate consolidated revenue fund was set up for the Territorial Government and wider powers in other areas of financial administration were introduced.

Meanwhile, in 1965, the Federal Government had appointed an Advisory Commission on the Development of Government in the Northwest Territories which travelled widely in the North to examine into the local needs for change. Following receipt of its recommendations in 1966, the Federal Government acted quickly to provide for a territorial administration resident in the Territories. Yellowknife was designated as the seat of territorial government. In June 1970, the Federal Government passed amendments to the Northwest Territories Act which increased the number of elected Council members from seven to 10 and decreased the number of appointed members from five to four. The amendments also extended the life of Council from three to four years; permitted Council to set its own indemnities and to establish the voting age in Territorial elections; and reduced the period of federal disallowance of Territorial Ordinances from two years to one.

Changes in Territorial Administration.—Unlike the Yukon Territory which has had its own public service since the turn of the century, the Government of the Northwest Territories, until recently, has been largely dependent upon the Federal Government for staff to implement its legislation and to operate its public services. Until 1963, the Deputy Minister of Northern Affairs (now Indian Affairs and Northern Development) was Commissioner, and the Northern Administration Branch of that Department was devoted to operating most government services in the Northwest Territories with federal public servants. In that year, a full-time Commissioner was appointed and charged with building up a territorial administration located initially in Ottawa but to move into the Territories as soon as possible and in September 1967 the Commissioner and his staff of about 50 persons moved to Yellowknife and immediately assumed responsibility for the operation of the liquor system (already staffed by territorial contract employees), for the game management service, for municipal affairs and for the issuing of all licences and the collecting of taxes. Operational responsibility for other government services was transferred from federal to territorial control in the Mackenzie District on Apr. 1, 1969, and in the Eastern Arctic on Apr. 1, 1970. The Territorial Government is structured to carry out its administration through seven line and three service departments, each under the direction of a senior public servant reporting to the Executive which consists of the Commissioner, the Deputy Commissioner and the Assistant Commissioner. The field staff is organized into four regions with Regional Directors at Fort Smith, Inuvik, Frobisher Bay and Churchill.

Present Government Structure.—The Northwest Territories Act, 1952, as amended, provides for an executive, legislative and judicial structure. The Commissioner is the chief executive officer. He is appointed by the Federal Government and is responsible for the administration of the Territories under the direction of the Minister of Indian Affairs and Northern Development. In practice, all major policy decisions are taken on the advice of this Council. The Commissioner can spend funds only to the extent voted by Council and all new revenue measures are subject to the approval of Council. Normally, the Commissioner obtains prior federal approval of proposed legislative and budgetary measures before submitting them to Council. A Deputy Commissioner is the effective head of the territorial administration.

The Legislative Council of 10 elected and four appointed members has a life of four years. It meets at least twice a year, usually for a period of three weeks, but more often if required. The Commissioner presides over Council in Session and the Deputy Com-

missioner sits as an appointed member. A Clerk of Council and a Legal Adviser provide the main administrative assistance and debates are recorded verbatim.

The Northwest Territories Act gives the Territorial Council authority to legislate in most "provincial" areas of government activity except for natural resources (other than game); these are reserved to the Federal Government which alone can provide the necessary development funds. Council is conducted under rules which are an adaptation of federal parliamentary procedure. Legislation (Ordinances) must receive three readings and have the assent of the Commissioner; he can reserve assent but this is a rare occurrence and the Federal Government may disallow any ordinance within one year. The Commissioner proposes most legislation but private members' Bills are allowed except for money matters which are the prerogative of the Commissioner. Besides draft legislation, the Council gives considerable time to policy papers in which the Commissioner asks for advice or seeks authority to take a particular course of action.

The court system of the Northwest Territories is described on p. 106.

Continuing Federal Responsibility.—The Government Organization Act, 1966 charges the Minister of Indian Affairs and Northern Development with responsibility for the development of the North and for the general co-ordination of federal activities in the area. His responsibilities for the Territorial Government through the Northwest Territories Act have been described as has the operation of government services by the staff of his Department. Other Federal Government agencies, such as the Northern Health Service of the Department of National Health and Welfare and the Royal Canadian Mounted Police, are responsible for health and police services with the Territorial Government sharing their costs. The Ministry of Transport operates mainline airports throughout the whole of the North and the Canadian Broadcasting Corporation provides special shortwave northern broadcasts and maintains a growing number of local stations in the Territories. Federal cost-shared national assistance programs, within the competence of the Territorial Government, are available to it on the same conditions as to the provinces.

There are about 6,000 Indians and 10,500 Eskimos in the Northwest Territories for whom the Federal Government has a special responsibility. Although there are no Indian reserves in the Territories, two treaties were entered into which established certain claims to land and certain other rights. As in the provinces, legislative authority with respect to Indians and lands reserved for Indians is vested exclusively in the Federal Government and this authority extends to Eskimos.

Extensive financial assistance is given to the Territorial Government under special federal-territorial agreements, usually spanning a period of five years. These agreements serve both to allocate the financial responsibility of each government for the provision of services in the Territories and to fix the amount of the federal financial payments to the Territorial Government for the life of the agreement. At the present stage of development, territorial revenues fall far short of meeting the expenditures of the Territorial Government. Under the financial agreements, all taxes on personal and corporate incomes, corporation taxes and succession duties are reserved to the Federal Government.

Excluding amortization of borrowings, the Territorial Government, during the year ended Mar. 31, 1970, spent about \$34,200,000 on operating accounts and about \$9,100,000 on capital projects. Of these expenditures, approximately \$4,750,000 was raised within the Territories through taxes, licences and liquor revenues and \$1,200,000 was recovered from residents of the Territories for services supplied. A further \$3,000,000 was recovered under federal shared-cost programs. The remainder was provided by the Federal Government as special operating grants and loans under the financial agreement and under the special arrangements relating to the move to the seat of government in Yellowknife.

COMMISSIONER, COUNCIL AND COUNCIL STAFF OF THE NORTHWEST TERRITORIES
(as at August 1970)

Section 3.—Local Government*

Local government in Canada comprises all government entities created by the provinces and territories to provide services which can be more effectively discharged through control at the local level. Broadly speaking, local government provides police and fire protection, health and welfare services, parks and recreation facilities, road and street construction and maintenance, waterworks and sewers, waste removal, etc. In addition, local government, through the medium of government enterprises, may operate such facilities as public transit and the supply of electricity and gas. The administration of education is also delegated to the local level of government but is normally administered separately from the other local functions (see Chapter VII, Pt. I, Sect. 2).

Many local government organizations antedate Confederation but under the British North America Act local government was made a responsibility of the provincial legislatures, a responsibility subsequently extended to the territories when their governments were constituted in the present forms. The unit of local government, apart from the school board, is usually the municipality which is incorporated as a city, town, village, township or other designation depending on the province. The powers and responsibilities of municipalities are those delegated to them by statutes passed by their respective provincial or territorial legislatures. Some of these statutes apply to all municipalities within a province, some to a certain type or group, and many to one municipality only.

Rapid and continuing urbanization during the past two decades and the demand for services in rural areas comparable to those obtainable in urban areas have placed great strains on local government. These strains have been aggravated by the inelasticity of the major local revenue source—the taxation of real property; at the same time, the small populations of most municipalities have hindered attempts to provide services that require economies of scale for efficient operation.

The provinces have taken a number of steps to assist local governments to meet these challenges. An increasing number of special agencies or joint boards and commissions have been created to provide certain services for groupings of municipalities. Local government revenue has been supplemented by grants from the provinces, either made unconditionally or for specific purposes. Certain functions traditionally assigned to local government have been assumed in whole or in part by the provinces. Besides encouraging the amalgamation of small units, the provinces have also established new levels of local government to provide services which can be better discharged at a regional level. The establishment

* Prepared in the Governments Division, Financial Statistics Branch, Dominion Bureau of Statistics.

of the Municipality of Metropolitan Toronto in 1954 was followed by that of the Metropolitan Corporation of Greater Winnipeg in 1960 and, more recently, the Regional Municipalities of Ottawa-Carleton and Niagara. In 1967, regional districts were established in British Columbia. A very different program is under way in Newfoundland where the scattered population in the many outposts is being encouraged and assisted to move to larger and more viable settlements.

The major local revenue source available to local government is the taxation of real property, supplemented in varying degrees by taxation of personal property, business and amusement taxes, or sales taxes on specific commodities. Revenue is also derived from licences, permits, rents, concessions, franchises, fines and surplus funds from municipal enterprises.

Since a description of all forms of local government would be too complex for easy comprehension, the following paragraphs describe only municipal organization in each province and in the territories as at Jan. 1, 1970. The accompanying tables give the total number of each type of municipality in each province and territory as well as numbers in each metropolitan and major urban areas.

Newfoundland.—At Jan. 1, 1970, Newfoundland had 190 incorporated areas comprising two cities, 69 towns, three rural districts, 23 local improvement districts, 92 local government communities and one metropolitan area. The towns, rural districts and local improvement districts operate under the Local Government Act; towns and rural districts have elected councils and local improvement districts have appointed trustees. Local government communities are established under the Community Councils Act in the smaller settlements and have limited powers and functions. The St. John's Metropolitan Area, incorporated under a special Act, covers the area adjoining and surrounding the city of St. John's and the town of Mount Pearl and is similar in organization to a local improvement district. There are no rural municipalities in the usual sense. Only about one fifth of 1 p.c. of the total area is municipally organized. Municipalities are supervised by the Department of Municipal Affairs and Housing.

Prince Edward Island.—In this province, one city and seven towns have been incorporated under special Acts and 24 villages have been established under the Village Services Act. There is no municipal organization for the remainder of the province, although it is divided into three counties which are subdivided into school sections having elected school boards. The organized municipalities are administered by the Department of Municipal Affairs.

Nova Scotia.—This province is geographically divided into 18 counties; 12 of these constitute separate municipalities and the remaining six are divided into two districts or municipalities, making a total of 24 rural municipalities. In addition, there are three cities operating under special charters and special legislation and 39 towns operating under the Town Incorporation Act. Although geographically located within counties or districts, cities and towns are entirely independent of them except as to joint expenditures. There is no part of the province that is not municipally organized. Supervision of municipalities is exercised through the Department of Municipal Affairs.

New Brunswick.—In 1967, the New Brunswick Government assumed direct responsibility for justice, health, welfare and education and fully reorganized the municipal system. The municipal organization is now comprised of six cities, 21 towns and 93 villages. The remainder of the province is not municipally organized and is administered by the provincial government. There are 160 unincorporated local service districts established to provide services that are municipal in nature but these are administered by the Department of Municipal Affairs and are not municipal organizations. Municipalities are supervised by the Department of Municipal Affairs.

Quebec.—The more thickly settled areas of Quebec, comprising about one third of the area of the province, are municipally organized; the remainder is governed by the province as "territories". The organized area is divided into 74 county municipalities which look after matters of general interest within the county. Cities and towns are excluded from the county system for political and administrative purposes except for certain joint expenditures. The remaining municipal corporations and the unorganized territory within counties fall under the county system. The counties have no direct powers of taxation. Funds to finance the services falling within their jurisdiction are provided by the municipalities forming part thereof. The municipalities are governed by Special Charter, by the Cities and Towns Act or by the Municipal Code. On Jan. 1, 1970, there were 1,635 municipalities, divided as follows: 64 cities, 195 towns, 292 villages, 520 parishes, 161 townships, 13 united townships and 390 municipalities without designation. There have been several attempts by the province during recent years to consolidate municipalities, the most notable example being the fusion in 1965 of 14 municipalities on Île Jésus to form the city of Laval. At the beginning of 1970, the Montreal and Quebec Urban Communities and the Outaouais Regional Community were established in which integration of services will be staged gradually. The supervision and assistance of municipalities is through the Department of Municipal Affairs and the Quebec Municipal Commission.

Ontario.—Slightly more than one tenth of Ontario's area is municipally organized (which includes 95 p.c. of its total population) and the remainder is governed entirely by the provincial government. The settled section of the province is divided into one metropolitan municipality, two regional municipalities and 35 counties. In addition, there are 33 cities, 151 towns, five boroughs, 150 villages, 551 townships and 17 improvement districts. The Municipality of Metropolitan Toronto, in existence since Jan. 1, 1954, encompasses one city and five boroughs, and is responsible for assessments, police, water supply, sewerage, metropolitan road systems, planning, etc. The regional municipalities of Ottawa-Carleton and Niagara have replaced the county administrations in their respective areas and assumed certain responsibilities over all the municipalities within their boundaries. This new form of regional government in Ontario is also contemplated in other areas. Each county, although an incorporated municipality, is comprised of the towns (with the exception of six separated towns), villages and townships situated within it. Some municipalities are located outside the counties in areas called districts. These districts are in the western and northern parts of Ontario and are not municipal entities. Supervisory control of municipalities is exercised by the Department of Municipal Affairs and the Ontario Municipal Board under the Municipal Act and other Acts governing aspects of municipal government.

Manitoba.—Manitoba has one metropolitan municipality, nine cities, 36 towns, 41 villages and 109 rural municipalities supervised by the Department of Municipal Affairs under the Municipal Act and special charters. The Metropolitan Corporation of Greater Winnipeg has been in existence since 1960 and 12 municipalities are within its boundaries. It is responsible for such services as planning, assessments, sewage disposal, water supply, etc. There are 18 local government districts incorporated under the Local Government Districts Act where the province has placed a resident administrator to carry out the functions of a municipal council. The unorganized areas are the direct responsibility of the provincial government.

Saskatchewan.—All municipalities in Saskatchewan derive their powers from general Acts that are designated with the name of the type of municipality. There are 11 cities, 131 towns, 360 villages and 292 rural municipalities. The area so organized consists of most of the southern part of the province, the remainder of this portion being administered by the province through nine unincorporated local improvement districts. The northern part is sparsely populated and some municipal services are provided by the province through the operation of the Northern Administration District. Municipalities are supervised by the Department of Municipal Affairs.

¹ The boundaries of Metropolitan Areas and Major Urban Areas are as defined by the Census Division of DBS.

Alberta.—This province has an Act applying to each type of municipality and under these Acts, the Department of Municipal Affairs supervises the nine cities, 101 towns, 168 villages, 18 municipal districts and 30 counties. The counties administer schools in addition to municipal functions. There are 50 improvement districts administered directly by the Department of Municipal Affairs and two special areas under the Special Areas Board also responsible to the Department of Municipal Affairs.

British Columbia.—In 1967, the Government of British Columbia instituted regional government in the province and by Jan. 1, 1970, 28 regional districts had been established. These regional districts are developing and are assuming responsibility for certain services from municipalities within their boundaries as well as providing services to previously unorganized areas. There are 31 cities, 13 towns, 54 villages and 40 districts. Districts are mostly rural although there are some adjacent to the principal cities of Vancouver and Victoria that are largely urban in character. Municipalities are supervised by the Depart-

ment of Municipal Affairs. In addition, there are unincorporated local districts supervised by the Department of Lands, Forests, and Water Resources that have been set up to provide certain municipal services such as protection, waterworks, irrigation, etc.

Yukon and Northwest Territories.—In the Yukon Territory, there are two cities and three local improvement districts and in the Northwest Territories, there are one city, three towns and three hamlets. The local improvement districts in the Yukon and the hamlets in the Northwest Territories, although incorporated, are developmental forms of local government.

Section 4.—Federal and Provincial Commissions of Inquiry or Royal Commissions

Federal Royal Commissions Established.—Royal Commissions, now generally called Commissions of Inquiry, established up to June 30, 1967 under Part I of the Federal Inquiries Act are given in previous Year Books beginning with the 1940 edition. Commissions appointed between that date and May 1, 1970, the closing date of this Chapter, are listed here. Any Commissions established between the latter date and the date of going to press of this publication will be found in the Register of Official Appointments, Chapter XXVII, Pt. III.

<i>Commission</i>	<i>Chief Commissioner or Chairman</i>	<i>Date Established</i>
Commission to inquire into the non-medical use of certain drugs and substances.....	GERALD LeDAIN.....	May 29, 1969
Commission (Prices and Incomes Commission) to inquire into the causes and consequences of inflation and suggest measures for stabilizing prices.....	JOHN H. YOUNG.....	June 19, 1969
Commission to consult with representatives of the Indians and study, recommend measures and advise as to claims re formal treaties and agreements.....	LLOYD BARBER.....	Dec. 19, 1969
Commission to exercise and perform the powers and duties conferred on a Bilingual Districts Board by the Official Languages Act.....	ROGER DUHAMEL.....	Feb. 12, 1970
Royal Commission to inquire into the pollution of Canadian waters by oil escaping from the tanker <i>Arrow</i> following its grounding in Chedabucto Bay, N.S.....	Hon. Mr. Justice G. L. S. HART	Mar. 12, 1970

Reports of Federal Royal Commissions.—Reports of Federal Royal Commissions issued during the period Jan. 1, 1969 to May 1, 1970 were as follows:—

Report of the Royal Commission on Security (abridged), established Nov. 16, 1966. Ottawa, 1969. 159 p. \$2. (Cat. No. Z1-1966/5).

Report of the Royal Commission on Pilotage, established Nov. 1, 1962:

Part III, Study of Canadian pilotage: Atlantic Provinces. Ottawa, 1969. 684 p. \$5. (Cat. No. Z1-1962/2-3).

Report of the Royal Commission on Bilingualism and Biculturalism, established July 19, 1963:

Book 3A.—Work world. Part 1: Socio-economic status. Part 2: Federal administration. Ottawa, 1969. 440 p. \$5. (Cat. No. Z1-1963/1-5/3A.)

Book 3B.—Work world. Part 3: Private sector. Part 4: Conclusions. Ottawa, 1969, pp. 445-576. \$2. (Cat. No. Z1-1963/1-5/3B.)

Report of the Royal Commission on Farm Machinery, established May 26, 1966:

Special report on prices of tractors and combines in Canada and other countries. Ottawa, 1969. 239 p. \$2.50. (Cat. No. Z1-1966/4-1-1).

Provincial Royal Commissions.—The following provincial Royal Commissions were established during the period Dec. 31, 1968 and May 1, 1970:—

<i>Province and Nature of Commission</i>	<i>Chief Commissioner or Chairman</i>	<i>Date Established</i>
NEWFOUNDLAND		
Labour.....	MAXWELL COHEN.....	1969

BRITISH COLUMBIA		
Liquor Inquiry Commission.....	His Hon. Judge C. W. MORROW	Jan. 31, 1969

PART III.—ADMINISTRATIVE FUNCTIONS OF THE FEDERAL GOVERNMENT

Section 1.—Financial Administration

The financial affairs of the Government of Canada are administered and controlled under the fundamental principles that no tax shall be imposed and no money shall be spent without the authority of Parliament and that expenditures shall be made only for the purposes authorized by Parliament. The most important constitutional provisions relating to Parliament's control of finances are contained in the British North America Act; this Act provides that all federal taxing and appropriating measures must originate in the House of Commons and all requests for grants must come from the Crown through responsible Ministers, and for such requests the Government is solely responsible. In practice, financial control is exercised through a budgetary system based on the principle that all the financial needs of the Government for each fiscal year be considered at one time so that both the current condition and the prospective condition of the public treasury are clearly in evidence.

* Appointed prior to Dec. 31, 1968 but omitted from list published in the 1969 Year Book.

Estimates and Appropriations.—The co-ordination of the Estimates process is carried out by the Treasury Board. This Board is a separate department of government, its Minister having the designation of President of the Treasury Board. In addition to the President, the Board consists of the Minister of Finance, and four other Privy Counsellors. Under the Financial Administration Act, the Board may act for the Privy Council in all matters relating to financial management including estimates, expenditures, financial commitments, establishments, revenues, accounts, terms and conditions of employment of persons in the Public Service and general administrative policy in the Public Service.

The Estimates for any one fiscal year are determined as a result of a two-phased review by the Treasury Board of departmental proposals for expenditure. In the spring of each year, at the request of the Secretary of the Treasury Board, each department submits to the Treasury Board a forecast of expenditures for the current and following four fiscal years. During the summer, a review of the programs giving rise to these expenditures forecasts is carried out by the Treasury Board as a result of which tentative expenditures figures are determined for each department for the coming fiscal year. The Board reviews each departmental program submission in the light of probable revenues and governmental policy generally, usually consulting the appropriate Minister and officials. Each department, using the figure resulting from this review as a guideline, develops in detail its manpower and other resource requirements and submits them to the Treasury Board late in October in the form of Main Estimates for the fiscal year beginning the following Apr. 1. These Estimates are analysed by the Treasury Board staff and compared with the guidelines determined during the spring program review. The Board reviews each departmental submission in the light of the current budgetary outlook. The Estimates may be rejected or reduced and unresolved differences of opinion may be referred to the Cabinet for decision. When the Board is satisfied with their substance and form, the Main Estimates are submitted to the Cabinet and later to the Governor in Council for approval and are then laid before the House of Commons.

On the motion of the President of the Privy Council, the Estimates of each department are initially referred for consideration to the appropriate standing committee of the House on or before Mar. 1. Under the Standing Orders, the House is deemed to have reported by May 31. The Government House Leader must give 48 hours notice of a motion for the House to concur in the Estimates that have been considered by the committee. The consideration of the Estimates usually extends over a period of several months and, under the Standing Orders, the Speaker is required to put every question necessary to dispose of any item of business relating to supply not later than the last sitting day in the period ending June 30 of each year. Each vote is the subject of a separate resolution and Members of the House may question the Minister on any item but no private Member or Minister on his own responsibility can introduce any new expenditure proposal or any amendment to an Estimates item that would result in an increased expenditure. When the examination of the individual items has been completed, a resolution approving the granting of moneys is referred to a committee of the whole House. When such resolutions are passed, an appropriation Bill is introduced which, when approved by the House of Commons and the Senate, is given Royal Assent and becomes law. Grants in the Appropriation Acts are grants to the Crown and funds cannot be disbursed until the supply voted by Parliament to the Crown is released by a warrant prepared on an Order of the Governor in Council and signed by the Governor General.

As weeks or months may elapse after the commencement of the fiscal year before the main Appropriation Act is passed, funds are made available for the conduct of government functions by the passage of an interim supply Bill granting one or more twelfths of the total of each item in the Estimates. Additional interim supply Bills may be introduced if required, awaiting Parliament's detailed consideration of the Estimates. In addition, to cover any new and unforeseen requirements that might arise during the year, Supplementary Estimates may be introduced and just prior to the end of the fiscal year further Supplementary Estimates are laid before the House. These Supplementary Estimates are dealt with in the same manner as the Main Estimates.

In addition to the expenditure items included in the annual Appropriation Acts, there are a number of items, such as interest on the public debt, family allowances and old age assistance payments, which have been authorized under the provisions of other statutes. Although it is not necessary for Parliament to pass annually on these items, they are included in the Main Estimates for purposes of information. Statutory provision also exists for the expenditure of public money in emergencies where no parliamentary appropriation is available. Under the Financial Administration Act, the Governor in Council, upon the report of the President of the Treasury Board that there is no appropriation for the expenditure and upon the report of the appropriate Minister that the expenditure is urgently required, may order the issuance of a special warrant authorizing disbursement of the amount required. Such warrants may be issued only when Parliament is not in session and every warrant must be published in the *Canada Gazette* within thirty days of issue and reported to Parliament within fifteen days of assembly. The Fire Losses Replacement Account Act also provides for emergency expenditures for the urgent repair or replacement of property destroyed or damaged by fire, where there is not sufficient money available in the appropriation for the service suffering loss. Such amounts must be charged subsequently to an appropriation or included in the Estimates for the department or agency concerned.

In addition, disbursements are made for purposes not reflected in the budgetary accounts but recorded in the Government's statement of assets and liabilities, such as loans to and investments in Crown corporations, loans to international organizations and to national, provincial and municipal governments, and loans to veterans. There are also disbursements in connection with deposit and trust accounts and annuity, insurance and pension accounts which the Government holds or administers, including the old age security fund and the Canada Pension Plan fund which are operated as separate entities. Although these disbursements are excluded from the calculation of the annual budgetary surplus or deficit, they are all subject to appropriation by Parliament either in the annual Appropriation Acts or in other legislation.

The Budget.—Some time after the Main Estimates have been introduced, the Minister of Finance presents his annual Budget Speech in the House of Commons. Budget papers, tabled for the information of Parliament at least one day prior to the presentation of the Budget, include a general review of economic conditions and a preliminary review of the Government's accounts for the fiscal year then ending. The Budget Speech itself reviews the state of the national economy and the financial operations of the Government for the previous fiscal year and gives a forecast of the probable financial requirements for the year ahead, taking into account the Main Estimates and making allowances for Supplementary Estimates and probable lapsings. At the close of his address, the Minister tables the formal resolutions for changes in the existing tax rates and customs tariff which, in accordance with parliamentary procedure, must precede the introduction of any money Bills. These resolutions give notice of the amendments which the Government intends to ask Parliament to make in the taxation statutes. However, if a change is proposed in a commodity tax, such as a sales tax or excise duty on a particular item, it is usually made effective immediately; the legislation, when passed, is made retroactive to the date of the Speech.

The Budget Speech is delivered in support of a motion that the House go into committee, the debate on which may take up six sitting days. With the passage of the motion, the way is clear for the consideration of the Budget resolutions and, when these have been approved by the Committee, a report to this effect is made to the House and the tax Bills are introduced and thereafter dealt with in the same manner as all other government financial legislation.

Revenues and Expenditures.—The administrative procedures whereby revenues are collected and expenditures made are, for the most part, contained in the Financial Administration Act.

With respect to revenues, the basic requirement is that all public money shall be paid into the Consolidated Revenue Fund, which is defined as the aggregate of all public money on deposit to the credit of the Receiver General. (Under the Government Organization Act, 1969, the Minister of Supply and Services is the Receiver General of Canada.) The Treasury Board has prescribed detailed regulations governing the receipt and deposit of such money. For the actual custody of public money, use is made of the Bank of Canada and the chartered banks. Balances are allocated to the various chartered banks on the basis of a percentage allocation established by agreement among all the banks and communicated to the Department of Finance by the Canadian Bankers' Association. The daily operating account is maintained with the Bank of Canada and the division of funds between it and the chartered banks takes into account the immediate cash requirements of the Government and consideration of monetary policy. The Minister of Finance may purchase and hold securities of, or guaranteed by, Canada and pay for them out of the Consolidated Revenue Fund or may sell such securities and pay the proceeds into the Fund. Thus, if cash balances in the Fund are in excess of requirements for the immediate future they may be invested in interest-earning assets. In addition, the Minister of Finance has established a purchase fund to assist in the orderly retirement of the public debt.

The Treasury Board exercises central control over the budgets, programs and staffs of departments and over financial and administrative matters generally. Although the most important part of this control function is exercised during the annual consideration of departmental long-range plans and the Estimates, the Board has the right to maintain continuous control over certain types of expenditure to ensure that the scale of activities and commitments for the future is held within approved policies, that departments follow uniform, efficient and economical practices, and that the Government is informed of and approves any major development of policy or significant transaction that might give rise to public or parliamentary criticism.

To ensure that the decisions of Parliament, the Government and Ministers in regard to expenditures are enforced, the Financial Administration Act provides that no payment shall be made out of the Consolidated Revenue Fund without the authority of Parliament and no charge shall be made against an appropriation except upon the requisition of the appropriate Minister or a person authorized by him in writing. These requisitions, and certificates that the work has been performed, the material supplied or the services rendered and that the price charged is reasonable or according to contract, together with such documents as may be required, are presented to the Receiver General, who makes the payment.

At the beginning of each fiscal year, or at such other times as the Treasury Board may direct, each department, unless otherwise directed by the Board, submits a division into allotments of each vote included in its Estimates. Once approved by the Board, these allotments cannot be varied or amended without the approval of the Board and expenditures charged to appropriations are limited to such allotments. To avoid over-expenditures within a fiscal year, commitments coming in course of payment within the year for which Parliament has provided or has been asked to provide appropriations are recorded and controlled by the departments concerned. (The Minister of Supply and Services may perform these services on behalf of departments.) Records are maintained of commitments made under contract that will fall due in succeeding years, since the Government must be prepared in future to ask Parliament for appropriations to cover them. Any unexpended amounts in the annual appropriations lapse at the end of the year for which they are granted, but for thirty days subsequent to Mar. 31 payments may be made and charged to the previous year's appropriations for debts payable prior to the end of that fiscal year.

Under the Financial Administration Act, every payment pursuant to an appropriation is made under the control and direction of the Receiver General by cheque or other instrument in such form and authenticated in such manner as the Treasury Board may direct. In practice, such cheques or instruments are cleared daily by the chartered banks through

the Bank of Canada to the Cheque Adjustment Division of the Receiver General, and reimbursement is made by means of a cheque drawn on the Receiver General's account with the Bank of Canada.

Public Debt.—In addition to the collection and disbursement of public money for budgetary and non-budgetary purposes, the Government receives and disburses substantial sums in connection with its public debt operations. The Minister of Finance is authorized to borrow money by the issue and sale of securities at such rate of interest and subject to such terms and conditions as the Governor in Council may approve. Although the specific authority of Parliament is required for new borrowings, the Financial Administration Act authorizes the Governor in Council to approve the borrowing of such sums of money as are required for the redemption of maturing or called securities and, to ensure that the Consolidated Revenue Fund will be sufficient to meet lawfully authorized disbursements, he may also approve the temporary borrowing of such sums as are necessary for periods not exceeding six months. The Bank of Canada acts as the fiscal agent of the Government in the management of the public debt.

Accounts and Financial Statements.—Under the Financial Administration Act, and subject to regulations of the Treasury Board, the Receiver General requires accounts to be kept to show the revenues of Canada, the expenditures made under each appropriation, the other payments into and out of the Consolidated Revenue Fund, and such of the assets and direct and contingent liabilities as the Minister of Finance believes are required to give a true and fair view of the financial position of Canada. The statement of assets and liabilities is designed to disclose the amount of the net debt, which is determined by offsetting against the gross liabilities only those assets regarded currently as readily realizable or interest- or revenue-producing. Fixed capital assets, such as government buildings and public works, are charged to budgetary expenditures at the time of acquisition or construction and are shown on the statement of assets and liabilities at a nominal value of \$1.

Annually, on or before Dec. 31 or, if Parliament is not then sitting, within any of the first fifteen days next thereafter that Parliament is sitting, the *Public Accounts*, prepared by the Receiver General, is laid before the House of Commons by the Minister of Finance. The *Public Accounts* contains a survey of the financial transactions of the fiscal year ended the previous Mar. 31, statements of the revenues and expenditures for that year and of the assets and direct and contingent liabilities as at the end of that year, together with such other accounts and information as are necessary to show the financial transactions and financial position of Canada or which are required by law to be reported in the *Public Accounts*. Monthly financial statements are also published in the *Canada Gazette*.

The Auditor General.—The Government's accounts are subject to an independent examination by the Auditor General who is an officer of Parliament. With respect to expenditures, this examination is a post-audit for the purposes of reporting whether the accounts have been faithfully and properly kept and whether the money has been expended for the purposes for which it was appropriated by Parliament and the expenditures have been made as authorized; any audit before payment is the responsibility of the department or agency requisitioning the payment. With respect to revenues, the Auditor General is required to ascertain that all public money is fully accounted for and that the rules and procedures applied are sufficient to ensure an effective check on the assessment, collection and proper allocation of the revenue. With respect to public property, he is required to satisfy himself that essential records are maintained and that the rules and procedures applied are sufficient to safeguard and control such property. The Auditor General reports to Parliament the results of his examination, calling attention to any case which he considers should be brought to the notice of the House. He also reports to Ministers, the Treasury Board or the Government any matter which in his opinion calls for attention so that remedial action may be taken promptly.

Public Accounts Committee.—It is the usual practice to refer the *Public Accounts* and the *Auditor General's Report* to the Public Accounts Committee of the House of Commons, which may review them and report the findings and recommendations to the House of Commons.

Section 2.—Departments, Boards, Commissions, etc.*

This Section indicates the functions of the various departments and the special boards and commissions conducting the work of the Government. Although it is not possible, owing to limitations of space, to include the details of each service or the divisions or sections of all departments, in general the main branches are given along with services that differ in some quality from the larger class of subjects handled. The work of many of the departments and agencies is given in detail in later Chapters of this volume; the Index will be useful in locating required information.

As mentioned in Section 1, the Public Service is under almost continual change in response to the growth in number, variety and complexity of the services required of the Government. In 1966, a major reorganization took place, partly to achieve a functional rationalization of existing activities and partly because new activities had to be undertaken. These changes, reflected in the Government Organization Act (SC 1966, c. 25), are outlined briefly in the 1967 Year Book, pp. 83-84.

Shortly after the passage of that Act, it became apparent that further major changes would be required. Thus, the Department of Industry was amalgamated with the Department of Trade and Commerce to facilitate, among other things, the co-ordination of the Government's policies and services to business in respect of such matters as industrial development and international marketing.

The establishment of a Department of Regional Economic Expansion continued the attempts to bring under the direction of a single Minister the key programs required to reduce regional economic disparities. The trend began in 1966 with the establishment of the Department of Forestry and Rural Development from elements of the previous Department of Forestry and elements of the Department of Agriculture, and was continued with the establishment of the Department of Regional Economic Expansion, whose responsibilities include the Area Development Agency (formerly of the Department of Industry) and the Experimental Projects Branch (formerly of the Department of Manpower and Immigration). In addition, the Atlantic Development Board was replaced by the Atlantic Development Council, a body designed to take over the main general functions of the Board but with expanded authority to examine and advise the Minister on the whole range of Atlantic development programs and policies.

The Department of Fisheries and Forestry was created by the amalgamation of the Department of Fisheries with the Forestry Branch of the former Department of Forestry and Rural Development, thereby bringing under the direction of a single Minister responsibility for the development of two of Canada's major renewable resources.

The creation of the Department of Communications reflects the importance of the development of communications in Canada. Its core was formed from a major portion of the Telecommunications Branch of the Department of Transport and from the Defence Research Telecommunications Establishment of the Defence Research Board. The Minister of Communications was also made Postmaster General, thereby extending the breadth of his responsibilities for most aspects of communications policy.

A new Department of Supply and Services brought together under the direction of a single Minister the major procurement and services functions of the Government, a consolidation designed to achieve major economies through central purchasing. Operating departments may now concentrate on their functional responsibilities without having to

* As at May 1, 1970; any major changes taking place between that date and the time of going to press will be carried in an Appendix to this volume. Also, the accompanying organization chart is brought up to the latest possible date before going to press; see lower right-hand corner.

The Centre Block of Canada's Parliament Buildings. It is here, in the legislative chambers, that the principles of democratic government are upheld—that policies submitted on matters of national concern are discussed, studied and, if approved by a majority of the people's representatives, become part of the law of the land.

Federal Government buildings at Tunney's Pasture, about two miles west of Parliament Hill, house a number of departments and agencies. This and other areas have gradually developed as government administrative services have been located throughout the National Capital area.

THE GOVERNMENT OF CANADA

DEPARTMENTS AND AGENCIES

These responsibilities are often more diverse than certain senior government officials, though each is responsible to a Minister of the Crown, are often viewed as departmental programs, some agencies are completely independent, the Minister under which such agency is listed acting only as a spokesman for it in the House of Commons.

become involved in providing major support services for themselves. The Central Data Processing Service Bureau formerly in the Treasury Board, and the Bureau of Management Consulting Services formerly in the Public Service Commission were transferred to the new Department. The Minister of Supply and Services became also the Receiver General of Canada, an office formerly held by the Minister of Finance.

In addition, there were other changes. The Medical Research Council, formerly associated with the National Research Council, now reported to Parliament through the Minister of National Health and Welfare; the National Council of Welfare was re-structured to provide more effective advice to the Minister of National Health and Welfare; the organization of the Science Council of Canada was brought more into line with that of the Economic Council of Canada and was given enhanced powers and greater independence from the Government; and the Royal Canadian Mint was made a Crown corporation to facilitate its operation on a commercial basis so that it could enter competitive coin manufacturing.

There were also changes of lesser significance. Any reorganization of the Public Service necessitates changes to the Financial Administration Act, if only to bring up to date the schedules listing all departments and agencies of the Government. The Act was also amended so that the Minister of Supply and Services would become the Receiver General of Canada, an office formerly held by the Minister of Finance. Because Members of Parliament are not, in principle, permitted to receive remuneration from the Crown beyond their parliamentary indemnity, the Salaries Act was amended to provide for the salaries of the new Ministers and, at the same time and for the same reason, the Senate and House of Commons Act was amended to make it clear that Members of Parliament could receive travelling expenses from the Government.

Department of Agriculture.—This Department was established in 1867 (SC 1868, c. 53) and undertakes work on all phases of agriculture. Research and experimentation are carried out by the Research Branch; the maintenance of standards and protection of products by the Production and Marketing Branch and the Health of Animals Branch; the Canada Grain Act, as it pertains to the inspection, weighing, storage and transportation of grain, is administered by the Board of Grain Commissioners; and farm income security and price stability are provided under the Crop Insurance Act, the Prairie Farm Assistance Act, the Canadian Dairy Commission Act, the Agricultural Stabilization Act and the Agricultural Products Board. The Agricultural Stabilization Board, the Farm Credit Corporation, the Board of Grain Commissioners, the Canadian Dairy Commission and the Canadian Livestock Feed Board report to Parliament through the Minister of Agriculture.

Anti-dumping Tribunal.—Under the Anti-dumping Act (SC 1968-69, c. 10) the Anti-dumping Tribunal is declared to be a court of record and makes formal inquiry into the impact of dumping on production in Canada. Within three months of a preliminary decision of the Deputy Minister of National Revenue, the Tribunal must make an order or finding on the question of injury, threat of injury or material retardation to production in Canada. Decisions of the Tribunal are final and conclusive. The Tribunal consists of a chairman and not more than four other members. Its offices are located in Ottawa and it may conduct hearings in other centres in Canada. The Tribunal reports to Parliament through the Minister of Finance.

Board of Grain Commissioners.—Constituted in 1912 under the Canada Grain Act (RSC 1952, c. 25), the Board of Grain Commissioners for Canada provides general supervision over the physical handling of grain in Canada by licensing elevator operators, inspecting and weighing grain received at and shipped from terminal elevators, and other services. It also manages and operates the Canadian Government Elevators system in Western Canada. The Board, comprising a chief commissioner and two commissioners, has authority to inquire into any matter relating to the grading and weighing of grain, deductions for dockage or shrinkage, deterioration of any grain during storage or treatment, unfair or discriminatory operation of a grain elevator, or any other matter which comes within the scope of the Canada Grain Act. The Board publishes its regulations in the *Canada Gazette*. It reports to Parliament through the Minister of Agriculture and routine administrative matters are handled through departmental channels.

Canadian International Development Agency.—As at Nov. 9, 1960, the operation and administration of Canada's external assistance programs became the responsibility of the External Aid Office, established by Order in Council, placing it in charge of a director general. In 1968 the name of the organization was changed to the Canadian International Development Agency (CIDA) and it was placed under the direction of a president. The Agency reports to Parliament through the Secretary of State for External Affairs.

Canadian Penitentiary Service.—The Penitentiary Service operates under the Penitentiary Act (SC 1960-61, c. 53) and is under the jurisdiction of the Solicitor General of Canada. It is responsible for all federal penitentiary institutions and for the care and training of persons sentenced or committed thereto. The Commissioner of Penitentiaries, under the direction of the Solicitor General, has control and management of the Service and all matters connected therewith.

Canadian Pension Commission.—This Commission, established in 1933 by amendments to the Pension Act (RSC 1952, c. 207), replaced the Board of Pension Commissioners, the first organization created to deal solely with war pensions for service in Canada's Armed Forces. The Commission's main function is the administration of the Pension Act under which it adjudicates upon all claims for pension in respect of disability or death arising out of service in Canada's Armed Forces; and Parts I to X inclusive of the Civilian War Pensions and Allowances Act, which provide for the payment of pensions in respect of death or disability arising out of civilian service directly related to the prosecution of World War II. It also adjudicates on claims for pension under various other measures; authorizes and pays monetary grants accompanying certain gallantry awards bestowed on members of the Armed Forces; and administers various trust funds established by private individuals for the benefit of veterans and their dependants. The Commission consists of eight to twelve commissioners and up to five *ad hoc* commissioners appointed by the Governor in Council. Its chairman has the rank of a Deputy Minister and it reports to Parliament through the Minister of Veterans Affairs.

Canadian Radio-Television Commission.—This Commission, established under the provisions of the Broadcasting Act assented to Mar. 7, 1968, is given authority to regulate and supervise all aspects of the Canadian broadcasting system. The Executive Committee, after consultation with the part-time members in attendance at a meeting of the Commission, may issue broadcasting licences or renewal licences for such terms, not exceeding five years, and subject to such conditions related to the circumstances of the licensee as the Executive Committee deems appropriate for the implementation of the broadcasting policy enunciated in Sect. 2 of the Broadcasting Act. Under the same circumstances, the Executive Committee may, upon application by a licensee, amend any conditions of a broadcasting licence issued to him. Applications for licences to establish new broadcasting undertakings, for amendments to licences, for renewal licences, or for changes in the ownership or in the share structure of licensees are filed with the Secretary, Canadian Radio-Television Commission, Ottawa, Ont. A public hearing shall be held by the Commission in connection with the issue of a broadcasting licence, other than a licence to carry on a temporary network operation, or where the Commission or the Executive Committee has under consideration the revocation or suspension of a licence. A public hearing shall be held by the Commission, if the Executive Committee is satisfied that it would be in the public interest to hold such a hearing in connection with the amendment of a licence, the issue of a licence to carry on a temporary network operation or a complaint by a person with respect to any matter within the powers of the Commission. A public hearing shall be held by the Commission in connection with the renewal of a licence unless the Commission is satisfied that such a hearing is not required.

The Commission consists of five full-time members and ten part-time members. It reports to Parliament through the Secretary of State.

Canadian Transport Commission.—The Canadian Transport Commission, created in 1967 by the National Transportation Act (SC 1967, c. 69), took over powers formerly vested in the Board of Transport Commissioners, the Air Transport Board and the Canadian Maritime Commission, giving it regulatory and judicial functions with respect to almost all aspects of railway, commercial air and merchant marine services. The Act also provides for the regulation of extra-provincial motor vehicle transport and commodity (solids) pipelines but the applicable parts of the Act were not yet in effect as at mid-1970. The Commission is divided into five Committees for the purpose of performing its regulatory duties under the Act: the Railway Transport Committee; the Air Transport Committee; the Water Transport Committee; the Motor Vehicle Transport Committee; and the Commodity Pipeline Transport Committee.

The Canadian Transport Commission is also given the responsibility for undertaking studies and research into the economic aspects of all modes of transport within, into or from Canada. It reports to Parliament through the Minister of Transport.

Commissioner of Official Languages.—Appointed by Parliament pursuant to the Official Languages Act (SC 1968-69, c. 54), the Commissioner holds office for a term of seven years, renewable until retirement age. He is responsible to Parliament for ensuring recognition of the equal status of French and English as Canada's official languages and for ensuring compliance with the spirit and intent of the Act in all the institutions of the Parliament and Government of Canada. To this end, the Commissioner is empowered to receive and investigate complaints from the public, as well as to initiate investigations into possible violations of the Act. The results of these investigations must be communicated to the complainants and the institutions concerned. The Commissioner reports annually to Parliament on the conduct of his office and may make recommendations for changes in the Act as he deems necessary or desirable.

Department of Communications.—The Department of Communications was established under Part II of the Government Organization Act, 1969 (SC 1968-69, c. 28), which received Royal

Assent on Mar. 28, 1969. The duties and powers of the Minister cover all matters over which the Parliament of Canada has jurisdiction relating to telecommunications and the development and utilization generally of communication undertakings, facilities, systems and services for Canada. They include the planning and co-ordination of telecommunication services for departments and agencies of the Government of Canada, formerly under the jurisdiction of the Department of Transport, assistance to communications systems and facilities to adjust to changing domestic and international conditions, and the securing, by international regulation or otherwise, of the rights of Canada in communications matters. The Minister of Communications is the Postmaster General and has the management and direction of the Post Office Department.

The Canadian Overseas Telecommunications Corporation reports to Parliament through the Minister of Communications.

Department of Consumer and Corporate Affairs.—Legislation to establish this Department (SC 1967-68, c. 16) received Royal Assent on Dec. 21, 1967. This statute transformed the former Department of the Registrar General of Canada into the new Department of Consumer and Corporate Affairs. The duties, powers and functions of the Minister extend to and include all matters over which the Parliament of Canada has jurisdiction, not by law assigned to any other department, branch or agency of the Government of Canada, relating to: consumer affairs; corporations and corporate securities; combines, mergers, monopolies and restraint of trade; bankruptcies and insolvencies; and patents, copyrights and trade marks.

As Registrar General of Canada, the Minister of Consumer and Corporate Affairs is the custodian of the Great Seal of Canada, the Privy Seal of the Governor General, the Seal of the Administrator of Canada and the Seal of the Registrar General of Canada. He is also Custodian of Enemy Property. The Bureau of Consumer Affairs co-ordinates government activities in the field of consumer affairs.

The Restrictive Trade Practices Commission (Combines Investigation Act) is domiciled in the Department and reports directly to the Minister.

Dominion Bureau of Statistics.—The Dominion Bureau of Statistics was set up by statute in 1918 as a central statistical department for Canada (SC 1918, c. 43). In 1948 this statute, which had been consolidated as the Statistics Act (RSC 1927, c. 190), was repealed and replaced by the Statistics Act (RSC 1952, c. 257); it was amended by SC 1952-53, c. 18, assented to Mar. 31, 1953.

The function of the Dominion Bureau of Statistics is to compile, analyse and publish statistical information relative to the commercial, industrial, financial, social and general condition of the people and to conduct regularly a census of population and agriculture of Canada as required under the Act.

The Bureau is a major publication agency of the Federal Government; its reports cover all aspects of the national economy. The administrative head of the Bureau is the Dominion Statistician who has the rank of a Deputy Head of a department and reports to Parliament through the Minister of Industry, Trade and Commerce.

Department of Energy, Mines and Resources.—The Department of Energy, Mines and Resources was created in 1966 by the Government Organization Act (SC 1966, c. 25). The Department, in addition to its administrative services, is organized into four groups: the Mines and Geosciences Group includes the Geological Survey of Canada, the Mines Branch, the Surveys and Mapping Branch, the Earth Physics Branch and the Polar Continental Shelf Project, all of which are engaged in research and the provision of information in their respective fields; the Mineral Development Group includes the Mineral Resources Branch, which gathers economic data for all minerals for use of government, industry and the public and conducts administrative functions of resource management, the Explosives Division which controls, under the provisions of the Explosives Act, the production and handling of explosives, and the Quebec Regional Office; the Water Group is concerned with all types of water matters including groundwater and oceanic investigations and surveys, water pollution, water power, water conservation and control, and federal-provincial and international studies and regulations; the Energy Development Group has broad responsibilities relating to the development of plans and policies for all forms of energy, the development of programs, legislation and agreements to implement those policies, the direction of studies relating to energy sources and requirements, and the co-ordination of policy advice. The Assistant Deputy Minister (Energy) serves as adviser on over-all plans and policies relating to energy sources and requirements.

The following Crown corporations report to Parliament through the Minister of Energy, Mines and Resources: Atomic Energy of Canada Limited, Eldorado Nuclear Limited, Eldorado Aviation Limited and the Atomic Energy Control Board. The National Energy Board, the International Boundary Commission and the Interprovincial Boundary Commissions also report to Parliament through the Minister.

Department of External Affairs.—This Department was established in 1909 by "An Act to create a Department of External Affairs" (RSC 1952, c. 68). Its main function is the protection and advancement of Canadian interests abroad. The Minister responsible for the Department is the Secretary of State for External Affairs. The senior permanent officer (Deputy Minister) of the Department, the Under-Secretary of State for External Affairs, is assisted by an Associate Under-

Secretary and by four Assistant Under-Secretaries and is advised by officers in charge of Branches, Offices and Divisions. The Heads of these units are each responsible for a part of the work of the Department and are assisted by Foreign Service Officers, Administrative Services Officers and specialists in various occupational groups, as well as by an administrative staff. Officers serving abroad are formally designated as High Commissioners, Ambassadors, Ministers, Counsellors, First Secretaries, Second Secretaries, Third Secretaries and Attachés at diplomatic posts and Consuls General, Consuls and Vice-Consuls at consular posts. Canada maintains approximately 135 diplomatic, consular and other missions, 52 of which are non-resident.

The work of the Department in Ottawa is performed by three Branches, two Offices and 20 Divisions. The three Branches are responsible respectively for Personnel, Finance and Administration, and Communications and Information Systems. The two Offices are concerned with Political-Military Affairs and Economic Affairs. The Divisions are grouped into two categories: Area Divisions are African and Middle Eastern, Commonwealth, European, Far Eastern, Latin American and United States; Functional Divisions are Arms Control and Disarmament, Consular, Co-ordination, Cultural Affairs, Historical, Information, Legal, Passport, Press, Protocol, Relations entre Pays Francophones, Scientific Relations and Environmental Problems, Security and Intelligence Liaison and United Nations. In addition, there is an Inspection Service, a Policy Analysis Group and an Operations Room.

The International Joint Commission reports to the Secretary of State for External Affairs of Canada as well as to the Secretary of State of the United States. The Secretary of State for External Affairs reports to Parliament for the Canadian International Development Agency.

Department of Finance.—This Department was created by Act of Parliament in 1869 and now operates under the Financial Administration Act (RSC 1952, c. 116). The Department is responsible for the financial administration of Canada including the raising of money required for the various government activities by way of taxation or borrowing. The work of the Department is organized into the following Divisions: Tax Policy, Economic Development, Federal-Provincial Relations, Fiscal Policy, Pensions and Social Insurance, Resource Programmes, Municipal Grants, Economic Analysis, Government Finance and Capital Markets, Crown Corporations Financing, International Finance, Tariffs, International Economic Relations, and International Programmes. The Inspector General of Banks is a branch of the Department. The Tariff Board, the Bank of Canada and its subsidiary, the Industrial Development Bank, the Anti-dumping Tribunal, the Canada Deposit Insurance Corporation, and the Department of Insurance report to Parliament through the Minister of Finance who is also the spokesman in the Cabinet and the House of Commons for the Auditor General of Canada.

Department of Fisheries and Forestry.—Established by the Government Organization Act, 1969, the Department of Fisheries and Forestry administers all matters within federal jurisdiction relating to (1) sea coast and inland fisheries, and (2) the forest resources of Canada, except those assigned by law to any other federal department or agency. The Department has three principal components—the Fisheries Service, the Fisheries Research Board, and the Canadian Forestry Service. A fourth component groups together common supporting services.

Responsibilities of the Fisheries Service were inherited from the Department of Fisheries established in 1930 to succeed what had been, since Confederation, a branch service. They include conservation and protection of fisheries through enforcement of laws and regulations, cultivation and development of fish stocks by scientific and technical means, inspection of fish products for quality control, encouragement of industrial development by technical and financial aid, economics research and intelligence services to industry and the public, and promotion of fisheries and fish products by information and consumer education programs. Field activities are administered through regional offices in St. John's, Nfld., Halifax, N.S., Quebec, Que., Winnipeg, Man., and Vancouver, B.C. The Fisheries Service is represented on the following international commissions: Pacific Salmon Fisheries, Pacific Halibut, Northwest Atlantic Fisheries, North Pacific Fisheries, Whaling, Great Lakes Fishery, North Pacific Fur Seal, Atlantic Tuna, Inter-American Tropical Tuna, and the International Council for the Exploration of the Sea.

The Fisheries Research Board traces its antecedents to 1898. It functions under the Fisheries Research Board Act of 1937 (amended in 1947 and 1952-53), and is headed by a full-time chairman and not more than 18 other members, mostly university scientists and industry representatives. The Board operates major research establishments in St. John's, Nfld., Halifax and Dartmouth, N.S., St. Andrew's, N.B., Ste. Anne de Bellevue, Que., Winnipeg, Man., and Vancouver and Nainaimo, B.C. Board scientists carry out research on distribution of fish stocks, biology and life history of fishes, marine mammals and other aquatic creatures and plants, oceanography, fishing techniques and on quality and nutritive value of fisheries products.

The main functions of the Canadian Forestry Service include: (1) the conduct of research relating to protection, management, harvesting and utilization of the forest resources of Canada and the better utilization of forest products; (2) the conduct of economic studies relating to forest resources, forest industries and the marketing of forest products; (3) encouragement of public co-operation in the protection and wise use of the forest resources; (4) co-operation with provincial governments and others by means of agreements on forestry matters; (5) provision of forest surveys and advice relating to the protection and management of federally administered forest lands; (6) protection and management of forests on federal lands at the request of the department or agency concerned; and

(7) assistance with external aid programs relating to forestry. Forest management responsibilities of the Service are confined to its forest experiment stations and to providing information on forest inventory and management planning to other federal departments administering forested lands.

Seven regional establishments carry out multi-disciplinary programs of forestry research, surveys, development projects and consultative and liaison services in their respective areas; they are located at St. John's, Nfld., Fredericton, N.B., Ste. Foy, Que., Sault Ste Marie, Ont., Winnipeg, Man., Calgary, Alta., and Victoria, B.C. Two Forest Products Laboratories—at Ottawa and Vancouver—conduct forest products research. In addition, research in restricted disciplinary fields is conducted by the Insect Pathology Research Institute at Sault Ste Marie; the Chemical Control Research Institute, the Forest Fire Research Institute, the Forest Management Institute, the Forest Ecology Institute and the Forest Economics Research Institute, all at Ottawa, and by the Petawawa Forest Experiment Station at Chalk River, Ont.

The Minister of Fisheries and Forestry reports to Parliament on behalf of the Fisheries Prices Report Board, the Freshwater Fisheries Marketing Corporation and the Eastern Rockies Forest Conservation Board.

Historic Sites and Monuments Board.—This Board was established in 1919 and amended to its present form in 1953 by an Act of Parliament (SC 1952-53, c. 39 as amended by SC 1955, c. 20 and SC 1969, c. 43). It is an appointed body of 12 provincial and two federal officials which advises the Minister of Indian Affairs and Northern Development on matters of national historic importance with particular reference to commemoration or preservation.

Department of Indian Affairs and Northern Development.—The Department of Indian Affairs and Northern Development was established in June 1966 under the terms of the Government Organization Act (SC 1966, c. 25), superseding the Department of Northern Affairs and National Resources. In 1968, the Department was reorganized, creating, in addition to departmental support services and a Technical Services Branch, three distinct program areas: (1) the Indian and Eskimo Affairs Program includes education, Indian trust administration and an Indian-Eskimo Bureau which provides a focal point for the federal administration for Indian and Eskimo affairs; (2) the Northern Development Program covers major resource development in the Canadian North, industrial development for Indians and Eskimos, land management of Indian reserves, wet-land acquisition, management of territorial resources along with economic research and advice; (3) the Conservation Program includes National Parks, Historic Sites and Parks and the Canadian Wildlife Service. As a result of the proposed Indian Policy, a group called the Indian Consultation and Negotiation Group has been created to carry out negotiations and consultations with Indian organizations and banks and with provincial governments on the policy proposals.

The Commissioner of the Northwest Territories and the Commissioner of Yukon Territory report to Parliament through the Minister of Indian Affairs and Northern Development. The Minister is also responsible to Parliament for the Northern Canada Power Commission, the National Battlefields Commission, the Historic Sites and Monuments Board of Canada and the Northern Transportation Company Limited. The Northern Scientific Adviser's Office acts in an advisory capacity to the Minister.

Department of Industry, Trade and Commerce.—Under the Government Organization Act 1969, the Departments of Industry and of Trade and Commerce were merged to form the Department of Industry, Trade and Commerce, the functions of which are to: (1) promote the establishment, growth and efficiency of manufacturing, processing and tourist industries in Canada, contribute to the sound development and productivity of Canadian industry generally and foster the expansion of Canadian trade; (2) develop and carry out such programs and projects as may be appropriate to (a) assist manufacturing and processing industries to adapt to changes in technology and to changing conditions in domestic and export markets, (b) assist manufacturing and processing industries to develop their unrealized potential, to rationalize and re-structure their productive facilities and corporate organizations and to cope with exceptional problems of adjustment, and (c) promote and assist product and process development and increased productivity, the greater use of research, the application of advanced technology and modern management techniques, the modernization of equipment, the utilization of improved industrial design and the development and application of sound industrial standards in Canada and in world trade; (3) improve the access of Canadian produce, products and services into external markets through trade negotiations and the promotion of trade relations with other countries and contribute to the improvement of world trading conditions; (4) promote the optimum development of Canadian export sales of all produce, products and services; (5) provide support services for industrial and trade development, including information, import analysis and traffic services; (6) analyse the implications for Canadian industry, trade and commerce and for tourism of government policies related thereto in order to contribute to the formulation and review of those policies; (7) compile and keep up to date detailed information in respect of manufacturing and processing industries in Canada and of trends and developments in Canada and abroad relating to Canadian industrial development and trade; and (8) promote the optimum development of income from tourism and compile and keep up to date detailed information in respect of the tourist industry and of trends and developments in Canada and abroad relating to tourism.

The Department is organized into five major functional groups: Trade and Industrial Policy; Office of Economics; Industry and Trade Development; Office of Tourism; and Administration.

The Trade and Industrial Policy component comprises the Office of General Relations, the Office of Area Relations and the Office of Industrial Policy Adviser. The Office of Economics has the following Branches: General Analysis, Investment Analysis, Market Analysis, and Productivity. The Industry and Trade Development segment contains an Operations group composed of nine industry sector Branches (Chemicals; Electrical and Electronics; Agriculture, Fisheries and Food Products; Machinery; Materials; Apparel and Textiles; Mechanical Transport; Wood Products; Aerospace, Marine and Rail); an External Services group consisting of the International Defence Programs Branch and the Trade Commissioner Service which operates 73 trade offices in 52 countries; a Promotional Services group containing the Industry, Trade and Traffic Services Branch which operates eight Regional Offices in Canada, the Fairs and Missions Branch, the Publicity Branch and the Canadian Government Participation in the 1970 World Exposition (OSAKA 70) Japan; and the Office of Design Adviser and the Office of Scientific and Technological Adviser. The Office of Tourism includes the Travel Industry Branch and the Canadian Government Travel Bureau.

The Minister also reports to Parliament on behalf of the Dominion Bureau of Statistics and the Export Development Corporation. Advisory Boards reporting to the Minister are the Adjustment Assistance Board, the General Adjustment Assistance Board, the Machinery and Equipment Advisory Board, the Pharmaceutical Industry Development Advisory Committee, and the National Design Council.

Information Canada.—This organization, established Apr. 1, 1970, was created to advise federal departments on their information programs, to co-ordinate information programs involving more than one department, and to produce information on the Federal Government and on Canada in general. Such information will be disseminated by conventional means and also through Regional Enquiry Centres to be set up across the country. Equally important is its responsibility to provide Parliament and Federal Government agencies with information on the attitudes and opinions of the Canadian people, as expressed individually, through the media or through attitudinal surveys.

On the date of its establishment, Information Canada assumed responsibility for the publishing functions of the Queen's Printer, the Canadian Government Exhibition Commission and the Still Photo Library of the National Film Board. It reports to Parliament through the Minister of Supply and Services.

Department of Insurance.—The Minister of Finance is responsible for the Department of Insurance which originated in 1875 as a branch of the Department of Finance but was constituted a separate Department in 1910. It is authorized and governed by the Department of Insurance Act (RSC 1952, c. 70). Under the Superintendent of Insurance, who is the Deputy Head, the Department administers the statutes of Canada applicable to: insurance, loan and trust companies incorporated by the Parliament of Canada; provincially incorporated insurance companies registered with the Department; British and foreign insurance companies operating in Canada; small loans companies and money-lenders; co-operative credit societies registered under the Co-operative Credit Associations Act; pension plans organized and administered for the benefit of persons employed in connection with certain federal works, undertakings and businesses; and life insurance issued to certain members of the Public Service prior to May 1954.

Under the relevant provincial statutes, the Department examines trust companies incorporated in the Provinces of Manitoba and New Brunswick and loan and trust companies incorporated in the Province of Nova Scotia.

International Joint Commission.—This Commission was established under a Britain-United States treaty signed Jan. 11, 1909 and ratified by Canada in 1911. The Commission, composed of six members (three appointed by the President of the United States and three by the Government of Canada), is governed by five specific Articles of the Boundary Waters Treaty of 1909. The Commission's approval is required for any use, obstruction or diversion of boundary waters affecting the natural level or flow of boundary waters in the other country; and for any works in waters flowing from boundary waters or below the boundary in rivers flowing across the boundary which raise the natural level of waters on the other side of the boundary.

Problems arising along the common frontier are also referred to the Commission by either country for examination and report, such report to contain appropriate conclusions and recommendations. In addition, questions or matters of difference between the two countries may be referred to the Commission for decision, provided both countries consent.

The Commission reports to the Secretary of State for External Affairs of Canada and to the Secretary of State of the United States.

Department of Justice.—This Department, established by SC 1868, c. 39, now operates under authority of the Department of Justice Act (RSC 1952, c. 71 as amended by SC 1960, c. 4 and SC 1966, c. 25). The Minister of Justice is the official legal adviser of the Governor General and the legal member of the Queen's Privy Council for Canada. It is his duty to see that the administration of public affairs is in accordance with law, to superintend all matters connected with the administration of justice in Canada that are not within the jurisdiction of the provincial governments, to advise upon the legislation and proceedings of the provincial legislatures, and generally to advise the Crown upon all matters of law referred to him by the Crown. The Minister of Justice is,

ex officio, Her Majesty's Attorney General of Canada. In this capacity it is his duty to advise the heads of the departments of the Government of Canada upon all matters of law connected with such departments, to settle and approve all instruments issued under the Great Seal of Canada, and to regulate and conduct all litigation for or against the Crown in the right of Canada.

Department of Labour.—The Department of Labour was established in 1900 by Act of Parliament (SC 1900, c. 24) and now operates under authority of the Department of Labour Act (RSC 1952, c. 72). The Department administers, under the Minister of Labour, legislation dealing with: industrial relations, investigation of disputes, etc.; fair employment practices; the regulation of fair wages and hours of labour; female employee equal pay; government annuities; government employee compensation; merchant seamen compensation; safety in employment; and hours of work, minimum wages, annual vacations and holidays with pay. It promotes joint consultation with industry through labour-management committees and operates a Women's Bureau. The Department publishes the *Labour Gazette* and other publications, as well as general information on labour-management, employment, manpower and related subjects.

The Merchant Seamen Compensation Board reports to the Minister of Labour. The Department is the official liaison agency between the Canadian Government and the International Labour Organization. The Unemployment Insurance Commission and the Canada Labour Relations Board report to Parliament through the Minister of Labour. The Canada Labour Relations Board administers certain provisions of the Industrial Relations and Disputes Investigation Act.

Library of Parliament.—The Library of Parliament as such was established in 1871 (SC 1871, c. 21) although it existed earlier. It currently functions under RSC 1952, c. 166 and SC 1955, c. 35. The Library of Parliament keeps all books, maps and other articles that are in the joint possession of the Senate and the House of Commons. The Parliamentary Librarian is also responsible for the Parliamentary Reading Room. Persons entitled to borrow books from the Library of Parliament are the Governor General, Members of the Privy Council, Members of the Senate and the House of Commons, Officers of the two Houses, Justices of the Supreme Court of Canada and the Exchequer Court, and members of the Press Gallery. In addition, books are lent to other libraries and government agencies and reference service is given to scholars. A special research branch serves Parliamentarians only. The Parliamentary Librarian has the rank of a Deputy Head of a department and is responsible for the control and management of the Library under the Speaker of the Senate and the Speaker of the House of Commons assisted by a Joint Committee appointed by the two Houses.

Department of Manpower and Immigration.—This Department was constituted in January 1966 by the Government Organization Act (SC 1966, c. 25), which was proclaimed effective on Oct. 1, 1966, under the Minister of Manpower and Immigration. It is composed of two operational divisions and four support services.

The Canada Manpower Division is responsible for the counselling and placement of workers, the recruitment of workers to meet industry's requirements, manpower training and mobility, community adjustment of migrants and immigrants, rehabilitation of vocationally handicapped workers, and manpower adjustment and employer consultation services. The Canada Immigration Division administers the Immigration Act and Regulations and is responsible for the selection, examination and movement of immigrants to Canada, and for the exclusion or deportation of undesirables.

The Program Development Service provides research and develops and evaluates programs for the two main operating divisions. Other support services are Financial and Management, Personnel, and Information.

The Department maintains 369 Canada Manpower Centres and 94 Canada Immigration Centres in Canada, as well as regional offices located in Halifax, Montreal, Toronto, Winnipeg and Vancouver. It also maintains 42 Canadian immigration offices abroad.

Department of National Defence.—The Department of National Defence and the Canadian Forces operate under the National Defence Act (RSC 1952, c. 184); the Canadian Forces are administered by the Minister of National Defence. Since August 1964, when a single Chief of Defence Staff was appointed, the reorganization of the Canadian Forces Headquarters, the Command structure and the consolidation of the Canadian Forces Bases has been continuing. In June 1965, a plan was announced to reduce the previous major commands in Canada to six: Maritime, Mobile, Air Transport, Air Defence, Training and Materiel. Subsequent to this announcement, a decision was made to amalgamate Materiel Command Headquarters with that of the Chief of Technical Services, Canadian Forces Headquarters and to re-assign the former Materiel Command units to the remaining five functional commands. The Act to reorganize the Canadian Forces was proclaimed on Feb. 1, 1968 and the forces were thereby unified.

A further reorganization was undertaken as of April 1970. Regional responsibilities were assigned to all the functional commanders except Air Defence Commander. Command of Reserves of the land and sea environments was delegated to Mobile Command and Maritime Command, respectively.

The Defence Research Board, created in 1947 to carry out research relating to national defence and to advise the Minister on all relevant matters of a scientific or technical nature, functions under

the National Defence Act. The Crown corporation, Defence Construction (1951) Limited, reports to Parliament through the Minister of National Defence. The Emergency Measures Organization (EMO) reports to the Minister of National Defence through the Deputy Minister.

National Energy Board.—This Board was established under the National Energy Board Act, 1959 for the broad purpose of assuring the best use of energy resources in Canada. The Board, composed of five members, is responsible for the regulation of the construction and operation of the oil and gas pipelines that are under the jurisdiction of the Parliament of Canada, the tolls charged for transmission by oil and gas pipelines, the export and import of gas and the export of electric power, and the construction of the lines over which such power is transmitted. The Board is also required to study and keep under review all matters relating to energy under the jurisdiction of the Parliament of Canada and to recommend such measures as it considers necessary and advisable on the subject. The Board reports to Parliament through the Minister of Energy, Mines and Resources.

National Film Board.—The National Film Board, established in 1939, operates under the National Film Act (RSC 1952, c. 185) which provides for a Board of Governors of nine members—a Government Film Commissioner, appointed by the Governor in Council, who is chairman of the Board, three members from the Public Service of Canada and five members from outside the Public Service. The Board reports to Parliament through the Secretary of State. The Board is responsible for advising the Governor in Council on film activities and is authorized to produce and distribute films in the national interest and, in particular, films "designed to interpret Canada to Canadians and to other nations".

Department of National Health and Welfare.—This Department was established in October 1944 under authority of the Department of National Health and Welfare Act (RSC 1952, c. 74). The original Department of Health formed in 1919 later became part of the Department of Pensions and National Health, which was replaced in 1944 by the Department of National Health and Welfare and the Department of Veterans Affairs.

The Department, headed by the Minister of National Health and Welfare, is administered by two Deputy Ministers. It is composed of: the Research and Statistics Directorate; the Administration Branch; and seven other Branches—Health Services, Health Insurance and Resources, Medical Services, Food and Drug, Income Security, Welfare Assistance and Services and Special Programmes. The health Branches come under the Deputy Minister of National Health who also carries responsibility arising out of Canada's role in the international health field. The welfare Branches are the responsibility of the Deputy Minister of National Welfare.

The Department has charge of matters relating to the promotion and preservation of the health, social security and social welfare of the people of Canada over which the Parliament of Canada has jurisdiction. Its functions include investigation and research into public health and welfare; inspection and medical care of immigrants and seamen and medical services for and in conjunction with the Canadian Coast Guard Service; supervision of health facilities on all forms of transportation; enforcement of regulations of the International Joint Commission relating to health; promotion and conservation of the health of Federal Government employees; collection, publication and distribution of information relating to health, sanitation and social and industrial conditions affecting the health of Canadians; and co-operation with provincial authorities with co-ordination of efforts directed toward the preservation and improvement of public health and toward the provision of social security and welfare for the people of Canada.

The programs developed to enable the Department to carry out its responsibilities include: the National Health Grant Program under which grants are made available to the provinces for the development and extension of health services; federal emergency health and welfare services; assistance and consultation services to the provinces, upon request, respecting blindness control, child and maternal health, environmental health, mental health, dental health, nursing, medical rehabilitation, bacteriology, virology, parasitology and clinical chemistry, zoonoses, nutrition and health facilities design; an environmental health program which is concerned with the provision of advice, the development of standards, and the design and conduct of studies and research directed to the assessment of the health significance and control of such environmental health hazards as air and water pollution, noise, industrial hazards, and exposure to harmful radiations; a drug adverse reaction reporting program, and a central clearing house for the Canadian Poison Control Centres; health, medical and hospital services to the Indians and Eskimos across Canada and to other elements of the population in the Yukon and Northwest Territories; government employee health services; and a system of grants to the provinces for professional welfare training, welfare research and general welfare services. The Department also acts as co-ordinator of the international welfare activities in which Canada is engaged.

The Medical Research Council reports to Parliament through the Minister of National Health and Welfare.

National Library.—The National Library came formally into existence on Jan. 1, 1953, with the proclamation of the National Library Act (RSC 1952, c. 330). It publishes *Canadiana*, a monthly catalogue of new publications relating to Canada, with an annual cumulation. The Library also publishes other bibliographies. Its Reference Division maintains the *National Union Catalogue*

which embodies the author catalogues of the major libraries in the ten provinces and is thus a key to the book collections of the whole country. The Library's own bookstock totals more than 400,000 volumes. The National Librarian reports to Parliament through the Secretary of State.

National Parole Board.—The establishment of the National Parole Board, which was formed in January 1959, is authorized by the Parole Act (SC 1958, c. 38) by which it is given absolute jurisdiction over all matters of parole, except that in respect of commuted death sentences it may only recommend rather than approve parole. It is composed of a chairman and eight members appointed by Order in Council for a ten-year period. The Board reports to Parliament through the Solicitor General of Canada.

Department of National Revenue.—From Confederation until May 1918, customs and inland revenue Acts were administered by separate departments; after that date they were amalgamated under one Minister as the Department of Customs and Inland Revenue. In 1921 the name was changed to the Department of Customs and Excise. In April 1924 collection of income taxes was placed under the Minister of Customs and Excise and, under the Department of National Revenue Act, 1927, the Department became known as the Department of National Revenue.

The Customs and Excise Division of the Department is responsible for the assessment and collection of customs and excise duties as well as of sales and excise taxes. The Taxation Division is responsible for the assessment and collection of income taxes, gift tax, old age security tax, Part I of the Canada Pension Plan, and estate taxes for Canada and all provinces, with certain exceptions, through its 29 district taxation offices and its Taxation Data Centre.

The Minister of National Revenue is responsible to Parliament for the Tax Appeal Board.

Office of the Auditor General.—This Office originated in 1878 (SC 1878, c. 7) and currently functions under the Financial Administration Act (RSC 1952, c. 116). The Auditor General is responsible for examining accounts relating to the Consolidated Revenue Fund and to public property, and for reporting annually to the House of Commons the results of his examinations. He also audits the accounts of various Crown corporations and other instrumentalities.

Office of the Chief Electoral Officer.—This Office was established in 1920 under the provisions of the Dominion Elections Act, now the Canada Elections Act (RSC 1960, c. 39, and amendments thereto), and is responsible for the conduct of all federal elections as well as the elections of members of the Northwest Territories Council and of the Yukon Territory Council. In addition, it conducts any vote taken under the Canada Temperance Act. The Chief Electoral Officer is responsible directly to Parliament, the Secretary of State acting as spokesman for him in the Cabinet and the House of Commons.

Office of the Representation Commissioner.—This Office was established in 1963 under the provisions of the Representation Commissioner Act (SC 1963, c. 40). The Representation Commissioner is responsible for preparing maps showing the distribution of population in each province and setting out alternative proposals respecting the boundaries of electoral districts in each province. It is also the Representation Commissioner's continuing responsibility to discharge his several duties pursuant to the provisions of the Canada Elections Act. The Secretary of State acts as spokesman for the Office in the Cabinet and the House of Commons.

Privy Council Office.—For administrative purposes, the Privy Council Office is regarded as a Department of Government under the Prime Minister. The Clerk of the Privy Council, under whose direction its functions are carried out, is considered as a Deputy Head and takes precedence among the chief officers of the Public Service. The authority of the Privy Council Office is to be found in Sects. 11 and 130 of the British North America Act, 1867, which constituted a Council to aid and advise in the government of Canada to be styled the Queen's Privy Council for Canada. In 1940, upon the wartime development of Cabinet committees and the consequent need for orderly secretarial procedures such as agenda, explanatory memoranda and minutes, the Principal Secretary in the Prime Minister's Office was designated Clerk of the Privy Council and Secretary to the Cabinet. Since 1946, the Privy Council Office has been further reorganized, developed and enlarged and certain administrative functions of the Privy Council Office and the Prime Minister's Office have been closely integrated in the interests of efficiency and economy.

The organization of the Privy Council Office at present consists primarily of the Cabinet Secretariat with the following divisions reporting to the Clerk of the Privy Council and Secretary to the Cabinet: Deputy Secretary to the Cabinet (Operations); Deputy Secretary to the Cabinet (Plans); Co-ordinator of Federal-Provincial Relations; and Director of the Science Secretariat. Within the Privy Council Office, submissions to the Governor in Council are received, draft orders and regulations prepared, approved Orders are circulated and, in addition, the duties of editing, registering and publishing the federal statutory regulations in Part II of the *Canada Gazette* are carried out. The various secretaries deal with secretarial work for the Cabinet and for Cabinet Committees and interdepartmental committees. This involves the preparation and circulation of agenda and necessary documents to Ministers and recording and circulating decisions; liaison with departments and agencies of the government; and the preparation of material for the Prime Minister.

The Office of the Prime Minister is organized as a Secretariat associated with the Privy Council Office and includes members of the Prime Minister's personal staff responsible for general secretarial duties, the drafting of letters, the arrangement of appointments to interview the Prime Minister or for his public appearances or for the release of his statements on matters of public interest, and for assisting the Prime Minister in his parliamentary duties.

Public Archives.—The Public Archives was founded in 1872 and is administered under the Public Archives Act (RSC 1952, c. 222) by the Dominion Archivist who has the rank of a Deputy Minister and reports to Parliament through the Secretary of State. Its purpose is to assemble and make available to the public a comprehensive collection of source material relating to the history of Canada. It also has broad responsibilities in regard to the promotion of efficiency and economy in the management of the Federal Government records. The Historical Branch, located in the National Library and Archives Building, is a centre for research on the development of Canada. In addition to the selected records of the Federal Government, it possesses an extensive collection of private papers of individuals and societies, a map collection which is the most important of its kind in the country, and an extensive collection of paintings, drawings, prints, photographs, sound recordings and films relating to Canada. A specialized library is also at the disposal of searchers. The Records Management Branch operates a large Records Centre in Ottawa and regional centres in Toronto and Montreal where non-current departmental records are centralized, stored and serviced. It assists departments in their records management program. The Administrative Technical Services Branch operates the Central Microfilm Unit for the several departments of government.

Under the terms of the Laurier House Act (RSC 1952, c. 163), the Public Archives is responsible for the administration of Laurier House as a museum.

Public Service Commission.—Arrangements were made for civil service appointments under the first Civil Service Act of 1868 but the first Civil Service Commission was created only in 1908. This established the beginnings of the merit system which is today the cornerstone of personnel administration in the Public Service. The Act of 1918 gave the Commission authority to control recruitment, selection, appointment, classification and organization and to recommend rates of pay. The next Civil Service Act, passed in 1961, strengthened the principles of the merit system, clarified the Commission's role in other areas of personnel administration, and gave the staff associations the right to be consulted on matters about remuneration and conditions of employment.

The Public Service Employment Act which came into force on Mar. 13, 1967, redefined the Commission's role as the central staffing agency and extended its authority to the Public Service, covering certain groups of employees exempt from the previous Acts. The Public Service is specified in Schedule A of the Public Service Staff Relations Act. It does not include Crown corporations, such as the Canadian Broadcasting Corporation, the Central Mortgage and Housing Corporation, the Canadian National Railways and Air Canada. The new Act also reaffirms the merit principle, at the same time permitting delegation of the Commission's authority, although not its responsibility, to Parliament. Under the Act, the Commission is relieved of responsibility for recommending rates of pay and conditions of service to the Government, for classification, and for consultation with staff associations on matters that are now the subject of collective bargaining.

The Public Service Commission reports to Parliament through the Secretary of State.

Department of Public Works.—The Department was constituted in 1867 and operates under the legislative authority of the Public Works Act of Parliament. It is responsible for the management and direction of the public works of Canada and, except as specifically provided in other Acts, attends to the construction and maintenance of public buildings, wharves, piers, roads and bridges and the undertaking of dredging and protection work. Federal Government interest in the Trans-Canada Highway and the Northwest Highway System is also handled by the Department. The Department has six Regional Offices—one each at Halifax, Montreal, Ottawa, Toronto, Edmonton and Vancouver—and District Offices at other key points across the country are also maintained. Departmental organization includes the Planning and Operations Branch, the Design Branch and the following Directorates: Accommodation Programs, Engineering Programs, Departmental Planning, Construction and Works Management, Program Evaluation, Financial Services, Personnel Administration, Administrative Services, Chief Architect, Chief Engineer, Chief of Accommodation Standards, Information Services, Legal Services (Justice) and the Dominion Fire Commissioner.

Department of Regional Economic Expansion.—This Department was established under the Government Organization Act, 1969 (SC 1968-69, c. 28) which received Royal Assent on Mar. 28, 1969. Its function is to ensure that economic growth is dispersed widely enough across Canada to bring employment and earning opportunities in the slow-growth regions as close as possible to those in the other parts of the country, without interfering with a high over-all rate of national growth. The legislation authorizes the Department, in co-operation with provincial governments and other federal agencies, to prepare development plans and programs designed to meet the special needs or particular areas. The main components of the Department previously existed within the framework of the Department of Forestry and Rural Development but certain financial changes were made by the 1969 legislation; the Department's operations are to be conducted on the basis of annual Parliamentary appropriations. The functions of the Area Development Agency, formerly

under the Minister of Industry, have been absorbed into the new Department which has also become responsible for programs under the Prairie Farm Rehabilitation Act (PFRA), the Agricultural and Rural Development Act (ARDA), the Maritime Marshlands Rehabilitation Act and the Atlantic Provinces Power Development Act. An Atlantic Development Council has been established to advise the Minister on the whole range of programs and policies for fostering economic expansion and social adjustment in the Atlantic region; this Council replaced the Atlantic Development Board, a Crown corporation that previously administered a fund to defray the expenses of planning and of projects initiated for the stimulating of growth in that area.

The Minister of Regional Economic Expansion reports to Parliament for the Cape Breton Development Corporation and the National Capital Commission.

Royal Canadian Mounted Police.—The Royal Canadian Mounted Police, a civil force maintained by the Federal Government, was organized in 1873 as the North-West Mounted Police. It now operates under the Royal Canadian Mounted Police Act, 1959 and is responsible for enforcing federal laws throughout Canada. By agreement with the governments of eight provinces (all provinces except Ontario and Quebec) it is also responsible for enforcing provincial laws within those provinces and for policing many district municipalities, cities and towns. A Commissioner, appointed by the Governor in Council, has the control and management of the Force and of all matters connected therewith; he functions under the direction of the Solicitor General of Canada.

Department of the Secretary of State.—The duties, powers and functions of the Secretary of State of Canada extend to and include all matters over which the Parliament of Canada has jurisdiction, not by law assigned to any other department, branch or agency of the Government of Canada, relating to: citizenship; elections; State ceremonial, the conduct of State correspondence and the custody of State records and documents; the encouragement of the literary, visual and performing arts, learning and cultural activities; and libraries, archives, historical resources, museums, galleries, theatres, films and broadcasting.

The responsibilities of the Department of the Secretary of State include those pertaining to the administration of the following branches: Citizenship; Citizenship Registration; Education Support; Official Languages Program; Artistic and Cultural Support; Ceremonies and Special Events; and Translation Bureau.

The Secretary of State reports to Parliament for the Canadian Film Development Corporation, the National Arts Centre Corporation, the National Film Board, the National Library, the Public Archives, the National Museums of Canada, the Canada Council, the Canadian Broadcasting Corporation, the Canadian Radio-Television Commission, the Company of Young Canadians and the Public Service Commission.

Department of the Solicitor General.—Before 1936, the Office of the Solicitor General was either a Cabinet post or a Ministerial post outside the Cabinet. From 1936 to 1945 the position did not exist, the duties of the Office being wholly absorbed by the Attorney General of Canada. The Solicitor General Act, 1945 (RSC 1952, c. 253) re-established the Solicitor General as a Cabinet officer and provided that "the Solicitor General shall assist the Minister of Justice in the Counsel work of the Department of Justice, and shall be charged with such other duties as are at any time assigned to him by the Governor-in-Council". This legislation was repealed by the Government Organization Act, 1966 (SC 1966, c. 25), which created a new Department of the Solicitor General and assigned to the Solicitor General of Canada responsibility for the Royal Canadian Mounted Police and the Canadian Penitentiary Service. The Solicitor General also reports to Parliament for the National Parole Board, which is an independent agency. With this new legislation, the Solicitor General of Canada becomes the Cabinet Minister with primary responsibility in the fields of correction and law enforcement.

Department of Supply and Services.—The Department of Supply and Services was established on Apr. 1, 1969 by the Government Organization Act, 1969, as a result of recommendations of the Royal Commission on Government Organization stressing the need for the Federal Government to foster efficiency and effect economies wherever possible. The Minister of Supply and Services is the Receiver General for Canada and exercises all the duties, powers and functions assigned to the Receiver General by law.

The Department is organized into two major administrations, each headed by a Deputy Minister directly responsible to the Minister. The Supply administration is composed of the former Department of Defence Production, the former Department of Public Printing and Stationery, and components of the Shipbuilding Branch of the Department of Transport. The Services administration encompasses the former Office of the Comptroller of the Treasury, together with the Central Data Processing Service Bureau from the Treasury Board, the Bureau of Management Consulting from the Public Service Commission and the Central Personnel Records System from the Dominion Bureau of Statistics.

The Supply administration has the primary function of purchasing, at minimum cost, the goods and services required by federal departments and agencies, and of maintaining Federal Government equipment. Purchasing offices are located in 11 cities across Canada and in London, England, and Koblenz, Germany, and equipment maintenance centres are located in six cities across the country. The Supply administration also administers the Canadian Government Printing Bureau, which is

responsible for providing the printing services required by Parliament and by federal departments and agencies. The main plant is located at Hull, Que., and printing units to meet local requirements of departments where there is need for fast service of a short-run nature are located within the National Capital Region and in several cities and National Defence Bases throughout Canada.

The Services administration, acting for the Receiver General, provides payment or cheque-issuing services on behalf of all federal departments, maintains the fiscal accounts of Canada and prepares the public accounts. It offers departments and agencies a broad range of management and advisory services in management consulting, auditing and computer services fields. It also provides for all departments administrative services in connection with pay, pensions and other employee benefit plans, together with financial management reports and statistical information related to its cheque-issuing function. Services functions are carried out through approximately 60 regional and district offices throughout Canada and abroad.

The Minister of Supply and Services reports to Parliament for Polymer Corporation Limited, Canadian Commercial Corporation, Canadian Arsenals Limited, Crown Assets Disposal Corporation and the Royal Canadian Mint.

Ministry of Transport.—The role and structure of the former Department of Transport were changed and a Ministry was created Feb. 17, 1970. The new Ministry is a corporate structure of Crown corporations and operating administrations having varying degrees of autonomy, together with separate agencies for development and economic regulation. A ministry headquarters staff supports the Minister and Deputy Minister in the functions of planning, policy formulation and assessment of program achievements in terms of the objectives of the Ministry.

The *Canadian Marine Transportation Administration* will co-ordinate the functions of the St. Lawrence Seaway Authority, the National Harbours Board and the Marine Services component of the former Department of Transport. Its operations include management of the St. Lawrence Seaway through the St. Lawrence Seaway Authority; direct supervision of eight harbours and other facilities through the National Harbours Board; 300 public harbours and 11 others administered by commissions under the supervision of the Ministry. It also is responsible for aids to navigation, nautical and pilotage services, marine agencies, steamship inspection and the Canadian Coast Guard.

The *Canadian Air Transportation Administration* operates Canada's airways and federal airports through its branches of Civil Aviation, Telecommunications and Electronics, Construction Engineering and Architectural, Airports and Field Operations, Planning Research and Development, and Air Traffic Control. It is also charged with the responsibility for the technical supervision of all aeronautical activities in the flight safety sense and provides Air Traffic Control as well as telecommunications and flight services to other components of the Ministry.

The *Canadian Meteorological Service* provides meteorological service and ice information in response to the need of a broad spectrum of segments of the national economy and promotes the application and development of meteorological services.

The *Canadian Surface Transportation Administration* brings together those elements of the former Department of Transport dealing with the programming and planning for federal participation in the operation and co-ordination of highway, rail and ferry transportation.

The *Arctic Transportation Agency* is in the process of being organized for effective liaison with the Department of Indian Affairs and Northern Development and other interests within the Territories, to co-ordinate transportation functions to respond to the special needs of the Arctic and to maintain general liaison with such bodies interested in the solution of transportation problems in the Canadian North.

The *Transportation Development Agency* is responsible for developing and co-ordinating technological research, working closely with government agencies and the academic and scientific community to provide the national focus for changing technology and development in the field of transportation.

The Ministry also includes Air Canada, Canadian National Railways, and Northern Transportation Company Limited. The latter was previously responsible to the Minister of Indian Affairs and Northern Development. These three Crown corporations are autonomous, maintaining close consultation with the Minister to be consistent with the Government's general policies in the field of transportation. The Minister of Transport also reports to Parliament for the Canadian Transport Commission.

Tariff Board.—Constituted in 1931, the Board derives its duties and powers from three statutes: the Tariff Board Act (RSC 1952, c. 261, as amended); the Customs Act (RSC 1952, c. 58, as amended); and the Excise Tax Act (RSC 1952, c. 100, as amended).

Under the Tariff Board Act, the Board makes inquiry into and reports upon any matter in relation to goods that, if brought into Canada, are subject to or exempt from customs duties or excise taxes. Reports of the Board are tabled in Parliament by the Minister of Finance. It is also the duty of the Board to hold an inquiry under Sect. 14 of the Customs Tariff and to inquire into any other matter in relation to the trade and commerce of Canada that the Governor in Council sees fit to refer to the Board.

Under the provisions of the Customs Act, the Excise Tax Act and the Anti-dumping Act, the Tariff Board acts as a court to hear appeals from rulings of the Department of National Revenue Customs and Excise Division, in respect of excise taxes, tariff classification, value for duty, and drawback of customs duties. Declarations of the Board on appeals on questions of fact are final and conclusive but the Acts contain provisions for appeal on questions of law to the Exchequer Court of Canada.

Tax Appeal Board.—The Tax Appeal Board (created in 1949 as the Income Tax Appeal Board) now operates under the Income Tax Act (RSC 1952, c. 148, as amended). The Board is declared by statute to be a court of record and has jurisdiction to hear and determine appeals by taxpayers against their assessment under the Income Tax Act and also appeals under the Estate Tax Act. An appeal lies from the Board to the Exchequer Court of Canada and a further appeal from that court to the Supreme Court of Canada. The Board consists of a chairman, an assistant chairman and four other members. Its offices are located at Ottawa and it hears appeals at the principal centres throughout Canada approximately twice a year and at the main centres, such as Montreal and Toronto, six times a year. The Board is under the jurisdiction of the Minister of National Revenue but is independent of the Department of National Revenue.

Treasury Board.—The Treasury Board was first established as a committee of the Queen's Privy Council for Canada by Order in Council PC 3 of July 2, 1867, and was made a statutory committee in 1869. The Minister of Finance was appointed Chairman of the Board, with four other Privy Councillors to be designated as members by the Governor in Council. The Secretary of the Board and the members of his staff were employed by the Department of Finance.

By the Government Organization Act, 1966 (SC 1966, c. 25) the Board Secretariat was established as a separate department of government with its own Minister, the President of the Treasury Board. The committee constituting the Treasury Board includes, in addition to the President, the Minister of Finance and four other Privy Councillors.

Amendments to the Financial Administration Act (RSC 1952, c. 116), passed in 1966, defined more clearly the Treasury Board's responsibilities as the central management agency of government. These responsibilities include expenditure control, including allocation of resources among departments and agencies of government; management of the personnel function in the Public Service; and improvement in the efficiency of management and administration in the Public Service.

The staff of the Treasury Board is divided into three Branches: the Planning Branch is responsible for the development and application of systems and procedures for evaluating the effectiveness and efficiency of programs and projects and for providing advice and planning assistance for organizational change in government; the Personnel Policy Branch is responsible for the classification of positions, the rates of pay, conditions of employment and for representing the Government in collective bargaining with bargaining agents representing employees in the Public Service; and the Program Branch is responsible for such matters as the financial management functions of short- and long-range expenditure forecasting, program analysis, expenditure control and estimates preparation, and the development and administration of policies, systems and methods for the management of real property, materiel and common services.

Department of Veterans Affairs.—This Department, established in 1944 (RSC 1952, c. 80), is concerned exclusively with the welfare of veterans and with the dependants of veterans and of those who died on active service. The Department provides treatment services (hospital, medical, dental and prosthetic), welfare services, education assistance, life insurance, and land settlement and home construction assistance. The Veterans' Bureau assists veterans in the preparation and presentation of pension claims.

The Canadian Pension Commission established by the Pension Act (RSC 1952, c. 207), and the War Veterans Allowance Board established by the War Veterans Allowance Act (RSC 1952, c. 340) also report to Parliament through the Minister of Veterans Affairs.

The Department has treatment institutions and facilities in a number of urban centres. It also maintains, in large cities across Canada, administrative offices, which are shared with the Canadian Pension Commission and the War Veterans Allowance Board, and an office in London, England.

War Veterans Allowance Board.—This Board, established under the authority of the War Veterans Allowance Act, 1930 (RSC 1952, c. 340, as amended) is a quasi-judicial body consisting of ten members including a chairman and a deputy-chairman, appointed by the Governor in Council. The Board administers the War Veterans Allowance Act and Part XI of the Civilian War Pensions and Allowances Act. It reports to Parliament through the Minister of Veterans Affairs. Its functions include the responsibility of ensuring that the 19 District Authorities, located in various regions throughout Canada, interpret the legislation in a fair, reasonable and equitable manner. It is also an appeal body which may consider the appeal of an appellant against the decision of a District Authority.

Section 3.—Crown Corporations

During the past quarter century, as the work of government has become more complex, greater reliance than formerly has been placed on the Crown corporation type of organization as the appropriate instrument for administering and managing many public services in which business enterprise and public accountability must be combined.

The use of the corporate device to harmonize public responsibility in the development of economic resources and the provision of public services with the pursuit of commercial and industrial objectives has led to the adoption of many different forms and formulas of management. The most usual practice has been to set up a corporation under the provisions of a special Act of Parliament which defines its purposes and sets forth its powers and responsibilities. However, during World War II the Minister of Munitions and Supply was authorized to procure the incorporation of companies under the federal Companies Act, 1934, or under any provincial Companies Act to which he might delegate any of the powers conferred on him under the Department of Munitions and Supply Act or any Order in Council. Under this legislation about 28 companies were created to serve a wide variety of purposes; most of these companies have since been wound up.

Following the successful experience during the war years in relying on the Companies Act for the establishment of Crown companies, similar incorporating powers were granted by an amendment to the Research Council Act and have been incorporated in the Atomic Energy Control and the Defence Production Acts.

In 1946 the Government Companies Operation Act was passed to regulate the operation of companies formed under the Companies Act. However, it was applicable only to a relatively small number of companies and, in order to establish a more uniform system of financial and budgetary control and of accounting, auditing and reporting for Crown corporations generally, Part VIII of the Financial Administration Act was enacted in 1951 and brought into operation by proclamation on Oct. 1, 1952. Upon its enactment the financial provisions of the Government Companies Operation Act were repealed.

One of the more interesting features of the later legislation is the attempt that has been made to define and classify Crown corporations. The Act defines a Crown corporation as a corporation that is ultimately accountable, through a Minister, to Parliament for the conduct of its affairs and establishes three classes of corporation—departmental, agency and proprietary.

Departmental Corporations.—A departmental corporation is defined as a Crown corporation that is a servant or agent of Her Majesty in right of Canada and is responsible for administrative, supervisory or regulatory services of a governmental nature. The following departmental corporations are listed in Schedule B to the Financial Administration Act:—

- Agricultural Stabilization Board
- Atomic Energy Control Board
- Director of Soldier Settlement
- The Director, The Veterans' Land Act
- Economic Council of Canada
- Fisheries Prices Support Board
- Municipal Development and Loan Board
- National Museums of Canada
- National Research Council
- Unemployment Insurance Commission.

Agency Corporations.—An agency corporation is defined as a Crown corporation that is an agent of Her Majesty in right of Canada and is responsible for the management of trading or service operations on a quasi-commercial basis or for the management of

procurement, construction or disposal activities on behalf of Her Majesty in right of Canada. The following agency corporations are listed in Schedule C to the Financial Administration Act:—

Atomic Energy of Canada Limited
 Canadian Arsenal Limited
 Canadian Commercial Corporation
 Canadian Dairy Commission
 Canadian Livestock Feed Board
 Canadian National (West Indies) Steamships Limited (virtually inoperative)
 Canadian Patents and Development Limited
 Centennial Commission
 Crown Assets Disposal Corporation
 Defence Construction (1951) Limited
 National Battlefields Commission
 National Capital Commission
 National Harbours Board
 Northern Canada Power Commission
 Royal Canadian Mint.

Proprietary Corporations.—A proprietary corporation is defined as a Crown corporation that (1) is responsible for the management of lending or financial operations, or for the management of commercial or industrial operations involving the production of or dealing in goods and the supplying of services to the public, and (2) is ordinarily required to conduct its operations without parliamentary appropriations. The following proprietary corporations are listed in Schedule D to the Act:—

Air Canada
 Canada Deposit Insurance Corporation
 Canadian Broadcasting Corporation
 Canadian Overseas Telecommunication Corporation
 Cape Breton Development Corporation
 Central Mortgage and Housing Corporation
 Eldorado Aviation Limited
 Eldorado Nuclear Limited
 Export Development Corporation
 Farm Credit Corporation
 Freshwater Fish Marketing Corporation
 National Railways, as defined in the Canadian National-Canadian Pacific Act, 1933
 Northern Transportation Company Limited
 Polymer Corporation Limited
 St. Lawrence Seaway Authority
 Seaway International Bridge Corporation Limited (formerly Cornwall International Bridge Company Limited), subsidiary to the St. Lawrence Seaway Authority.

Departmental corporations are governed by the provisions of the Financial Administration Act that are applicable to departments generally. Agency and proprietary corporations, however, are subject to the provisions of the Crown corporations Part of the Act, although, if there is any inconsistency between the provisions of that Part and those of any other Act applicable to a corporation, the Act provides that the latter prevail. There is provision in the Part for the control and regulation of such matters as corporation budgets and bank accounts, the turning over to the Receiver General of surplus money, limited loans for working-capital purposes, the awarding of contracts and the establishment of reserves, the keeping and auditing of accounts, and the preparation of financial statements and reports and their submission to Parliament through the appropriate Minister.

A further form of control is exercised by Parliament through the power to vote financial assistance. This may take different forms. For some corporations, capital may be provided by parliamentary grants, loans or advances that may subsequently be converted into capital stock or bonds; for others it may be by the issue of capital stock to be subscribed and paid for by the Government; or by the sale of bonds to either the Government or the public. A few corporations have financed all or a portion of their requirements from their own resources or earnings.

Prior to 1952, Crown corporations did not pay corporate income taxes. However, the Income Tax Act was later amended so that, in respect of financial years commencing after Jan. 1, 1952, proprietary Crown corporations pay taxes on income earned in the same manner as any privately owned corporation. One desirable result of this amendment is that the financial statements of these Crown companies are now more comparable with those of private industry, with which in some instances they are in competition, and thus it is easier to assess the relative efficiency of their operations. Crown corporations are also liable for the payment of provincial retail sales taxes, gasoline or motor vehicle fuel taxes and motor vehicle fees in terms of the Crown Corporations (Provincial Taxes and Fees) Act of 1964.

Unclassified Corporations.—Not all Crown corporations are subject to the provisions of the Financial Administration Act. For example, the Canadian Wheat Board, the Bank of Canada and its subsidiary the Industrial Development Bank, because of the special nature of their functions, are excluded from operations of the Crown corporations Part of the Act and are governed by their own Acts of incorporation as is also the Eastern Rockies Forest Conservation Board, a joint federal-provincial enterprise. The Canada Council was set up under the Canada Council Act (assented to Mar. 28, 1957) as a Crown corporation but has been declared not an agency of the Crown and hence is not included in the Schedules to the Financial Administration Act; the same situation applies to the Science Council of Canada (assented to May 12, 1966), the Company of Young Canadians (assented to July 11, 1966) and the National Arts Centre Corporation (assented to July 15, 1966).

Agricultural Stabilization Board.—The Board was established in 1958 (SC 1957-58, c. 22) to administer the provisions of the Agricultural Stabilization Act. The Board reports to Parliament through the Minister of Agriculture and routine administrative matters are handled through departmental channels.

Air Canada.—Formerly Trans-Canada Air Lines, the corporation was incorporated by Act of Parliament in 1937 to provide a publicly owned air transportation service, with powers to carry on its business throughout Canada and outside of Canada. Air Canada now maintains passenger, mail and commodity traffic services over nation-wide routes and also services to the United States, England, Scotland, Ireland, Belgium, France, Switzerland, West Germany, Austria, Denmark, the Soviet Union, Czechoslovakia, Bermuda, the Bahamas, Jamaica, Antigua, Barbados and Trinidad. Air Canada is responsible to Parliament through the Minister of Transport.

Atomic Energy Control Board.—By Act of Parliament (RSC 1952, c. 11) proclaimed October 1946, the regulation and control of atomic energy in Canada was placed under the Atomic Energy Control Board. The Board reports to Parliament through the Minister of Energy, Mines and Resources.

Atomic Energy of Canada Limited.—This Crown company was incorporated in February 1952 under the Atomic Energy Control Act, 1946 (RSC 1952, c. 11) to take over from the National Research Council on Apr. 1, 1952 the operation of the Chalk River project. The main activities of the company are (a) the development of economic nuclear power, (b) scientific research and development in the atomic energy field, (c) the operation of nuclear reactors and (d) the production of radioactive isotopes and associated equipment such as Cobalt-60 beam therapy units for the treatment of cancer. The company reports to Parliament through the Minister of Energy, Mines and Resources.

Bank of Canada.—Legislation of 1934⁷ (RSC 1952, c. 13,⁸ as amended⁹ by RSC 1952, c. 315; SC 1953-54, c. 33; and 1966-67, c. 88) provided for the establishment of a central bank in Canada, the function of which is to regulate credit and currency, to control and protect the external value of the Canadian dollar and to stabilize the level of production, trade, prices and employment as far as may be possible within the scope of monetary action. The Bank acts as the fiscal agent of the Government of Canada, manages the public debt and has the sole right to issue notes for circulation

in Canada. The Bank is managed by a Board of Directors appointed by the Government and composed of a governor, a deputy governor and 12 directors; the Deputy Minister of Finance is also a member of the Board. The Bank reports to Parliament through the Minister of Finance.

Canada Council.—Established by Order in Council dated Apr. 15, 1957, this corporation, composed of a chairman, a vice-chairman and 19 other members, a director and an associate director, operates under the terms of the Canada Council Act, assented to Mar. 28, 1957. The function of the Council is to encourage the arts, humanities and social sciences in Canada, mainly through a broad program of fellowships and grants. Its principal sources of income are an annual grant of the Canadian Government, which amounted to \$23,700,000 for the year ended Mar. 31, 1970, and an Endowment Fund, originally of \$50,000,000, which has an annual yield of approximately \$4,600,000. In the making, managing and disposing of investments under the Act, the Council has the advice of an Investment Committee of five, including the chairman and another member of the Council. The proceedings of the Council are reported each year to Parliament through the Secretary of State.

Canada Deposit Insurance Corporation.—The Corporation was established by legislation (SC 1966-67, c. 70 as amended), which received Royal Assent on Feb. 17, 1967. It is empowered to insure Canadian currency deposits other than those of Canada, up to \$20,000 per person, in banks, federally incorporated trust and loan companies that accept deposits from the public, and in similar provincially incorporated institutions that are authorized by their provincial governments to apply for such insurance. The Corporation is also empowered to act as a lender of last resort for member institutions. The Board of the Corporation comprises a chairman, appointed by the Governor in Council, and four other directors who hold the positions of Governor of the Bank of Canada, Deputy Minister of Finance, Superintendent of Insurance and Inspector General of Banks.

Canadian Arsenals Limited.—This company was established under the Companies Act by Letters Patent dated Sept. 20, 1945, and is subject to the Government Companies Operation Act (RSC 152, c. 133) and certain provisions of the Financial Administration Act (RSC 1952, c. 116). The company was set up to take over and operate Crown-owned plants and equipment. It has extensive facilities for the manufacture of small arms and ammunition components as well as for the filling and assembly of artillery ammunition, mines, bombs, grenades, rockets and other specialties up to torpedo warheads. The Head Office of the Company is in Ottawa, the Small Arms Division is at Long Branch, Ont., and the Filling Division at St. Paul l'Ermite, Que. The company reports to Parliament through the Minister of Supply and Services.

Canadian Broadcasting Corporation.—The CBC functions under the Broadcasting Act, 1968, which continues the Corporation as a Crown agency charged with the operation of a national broadcasting service. It has authority among other things to maintain and operate broadcasting undertakings and to originate and secure programs from within or outside Canada. Its radio and television services are financed through Parliamentary grants, supplemented by revenues from commercial operations. The Corporation reports to Parliament through the Secretary of State.

The Corporation consists of a president and 14 other directors appointed by the Governor in Council. The President is appointed for a term not exceeding seven years and is eligible for reappointment. Directors are appointed for periods not exceeding five years and may serve two consecutive terms. The President is the chief executive officer of the Corporation. The Executive Vice-President is responsible to the President for the management of broadcasting operations in accordance with policies prescribed by the Corporation.

The Corporation's Head Office is situated in Ottawa. The production centre for English Services is located in Toronto and for French Services in Montreal. The main regional production centres are in St. John's for Newfoundland, Halifax for the Maritimes, Ottawa for the Ottawa Area, Winnipeg for the Prairie Provinces, and Vancouver for British Columbia. Headquarters for the Northern and Armed Forces Services is in Ottawa. The operational centre for the CBC International Service is in Montreal.

Canadian Commercial Corporation.—Established in 1946 by Act of Parliament, the Canadian Commercial Corporation is wholly owned by the Government of Canada. Initially it assumed the undertakings of the then Canadian Export Board covering procurement in Canada of goods and services on behalf of foreign governments and United Nations relief agencies. In 1947 responsibility for procurement of the requirements of the Department of National Defence was transferred from the Department of Reconstruction and Supply to the Corporation which fulfilled these additional functions until the formation of the Department of Defence Production in 1951. In 1963 the staff of the Corporation was integrated with that of the Department of Defence Production, now the Department of Supply and Services, which provides all the management and services required by the Corporation.

The Corporation continues to act primarily as the Canadian Government contracting and procurement agency on behalf of foreign countries desirous of purchasing defence or other supplies and services from Canada on a government-to-government basis. It reports to Parliament through the Minister of Supply and Services.

Canadian Dairy Commission.—This Commission, which reports to Parliament through the Minister of Agriculture, was established on Dec. 2, 1966 (SC 1966, c. 34) to provide efficient producers of milk and cream with the opportunity of obtaining a fair return for their labour and investment and to provide consumers of dairy products with a continuous and adequate supply of dairy products of high quality. The Commission has three members appointed by the Governor in Council and operates with the advisory assistance of a nine-member Consultative Committee appointed by the Minister.

Canadian Film Development Corporation.—This Corporation, established by Act of Parliament in March 1967 (SC 1966-67, c. 78), has the function of fostering and promoting the development of a feature film industry in Canada through investment in productions, loans to producers, grants to film-makers and film technicians, and advice and assistance in distribution and administrative matters. It works in co-operation with other federal departments and agencies and with provincial departments and agencies having like interests and finances its operations from a film development advance account in the Consolidated Revenue Fund. The Corporation has a Government Film Commissioner and six other members appointed by the Governor in Council for terms, initially, of from three to five years and reports to Parliament through the Secretary of State.

Canadian Livestock Feed Board.—The Canadian Livestock Feed Board is a Crown corporation established pursuant to the Livestock Feed Assistance Act (SC 1966, c. 52). The objects of the corporation are to ensure that sufficient feed grain and storage for feed grain is available to meet the needs of livestock feeders and to ensure reasonable stability and fair equalization of feed grain prices in Eastern Canada and in British Columbia. Its powers include authority to make payments related to the cost of feed grain storage and transportation costs to attain its objectives. It may also buy, transport, store and sell feed grains in Eastern Canada and British Columbia when authorized by the Governor in Council.

The Board consists of a chairman, a vice-chairman and two members, and it reports to Parliament through the Minister of Agriculture. There is also an Advisory Committee made up of seven members.

Canadian National Railways.—The Canadian National Railway Company was incorporated (SC 1919, c. 13) to operate and manage a national system of railways, including the Canadian Northern Railway System, the Canadian Government Railways and all lines entrusted to it by Order in Council. In 1923 the Grand Trunk Railway Company of Canada was amalgamated with the Canadian National Railway Company and since 1923 a number of railway lines acquired by the Government have been entrusted to the Company for operation and management, including the Newfoundland Railway and steamship services in 1949, the Temiscouata Railway in 1950, and the Hudson Bay Railway and the Northwest Communication System in 1958. The Canadian National Railways Act, 1919 was repealed in 1955 and the Canadian National Railways Act (SC 1955, c. 29) substituted therefor.

The Canadian National Railway Company is controlled by a chairman and board of directors appointed by the Governor in Council, who report to Parliament through the Minister of Transport.

Canadian Overseas Telecommunication Corporation.—This Crown company was created on Jan. 1, 1950 by Act of Parliament (RSC 1952, c. 42) to acquire for public operation external telecommunication assets in Canada, in keeping with the Commonwealth Telegraph Agreement signed May 11, 1948. This Agreement was designed to bring about the consolidation and strengthening of the radio and cable communication systems of the Commonwealth. The Corporation reports to Parliament through the Minister of Communications.

Canadian Patents and Development Limited.—This Crown corporation was set up in 1947 pursuant to authority granted in an amendment to the Research Council Act passed in 1946. The purpose of the company, which is a subsidiary to the National Research Council, is to patent and licence new products and processes that come out of NRC research, research of other government departments and agencies, and research of Canadian universities. Proposals for patents are assessed with regard to originality, existence of similar patented products or processes, commercial appeal, humanitarian or scientific value, and cost of developing, promoting and marketing. CPDL initiates and finances the development of many inventions to a stage where it is economically possible for private industry to carry them through to production and sale, thus bridging the gap between research and industry. Profits from inventions are used to sponsor less profitable but often more beneficial inventions, such as highly specialized surgical or scientific instruments.

The company reports to Parliament through a designated Minister, at present a Minister without Portfolio.

Canadian Wheat Board.—The Board was incorporated in 1935 under the Canadian Wheat Board Act to market, in an orderly manner, in the interprovincial and export trade, grain grown in Canada. Its powers include authority to buy, take delivery of, store, transfer, sell, ship or otherwise dispose of grain. Except as directed by the Governor in Council, the Board was not originally authorized to buy grain other than wheat but, since Aug. 1, 1949, it may also buy oats and barley

if authorized to do so by Regulation approved by the Governor in Council. Only grain produced in the designated area, which includes Manitoba, Saskatchewan, Alberta and parts of British Columbia and Ontario, is purchased by the Board, which controls the delivery of grain into elevators and railway cars in that area as well as the interprovincial movement and export of wheat, oats and barley generally. The Board reports to Parliament through a designated Minister, at present a Minister without Portfolio.

Cape Breton Development Corporation.—This Corporation was created by an Act of Parliament, assented to on July 7, 1967 (SC 1967-68, c. 6) and came into existence by proclamation on Oct. 1, 1967, as a proprietary Crown corporation. The Corporation was established to promote and assist the financing and development of industry on the Island and to provide employment outside the coal producing industry to broaden the base of the economy of the Island.

The Corporation has acquired the former interests of the major coal producer in the Sydney coalfield and, in accordance with its approved plan as required by Sect. 17 of the Act, is operating and reorganizing four mines with a view to the rationalization of coal production.

The Act provides for a board of directors, comprised of a chairman, a president and five other directors. Head Office is located in Sydney, N.S. The Corporation now reports to Parliament through the Minister of Regional Economic Expansion. Its operations are financed by the Government of Canada with some assistance from the Government of Nova Scotia for industrial development projects. During 1969, approximately \$36,000,000 was expended for all purposes.

Central Mortgage and Housing Corporation.—This Corporation was incorporated by Act of Parliament (RSC 1952, c. 46) in December 1945 to administer the National Housing Acts. Under the National Housing Act, 1954 (SC 1953-54, c. 23, as amended), the Corporation insures mortgage loans made by approved lenders for new and existing housing and makes direct loans in resource communities and rural areas; guarantees home improvement loans made by banks, undertakes subsidized rental housing projects and land assembly developments under federal-provincial arrangements; offers loans and subsidies for public housing projects; makes loans for land assembly projects to be used for general residential development; makes loans to individuals or organizations for low-rental housing projects; makes loans for students' housing and to provinces and municipalities with provincial concurrence for sewage treatment projects designed to eliminate water and soil pollution; makes contributions and loans to provinces and municipalities for urban renewal operations; conducts housing research; encourages urban planning and owns and manages rental housing units including those built for war workers and veterans. The Corporation arranges for and supervises construction of housing projects on behalf of the Department of National Defence and other government departments and agencies. The Corporation is responsible to Parliament through a Minister without Portfolio.

Company of Young Canadians.—The Act establishing this corporation (SC 1966, c. 36) was assented to on July 11, 1966 and was amended by SC 1969, c. 5. The corporation consists of a Council of the Company and persons who are officers, employees and volunteer-members of the Company. The Council has not more than nine members and not less than seven members appointed by the Governor in Council. Terms of office for members of the Council will not exceed three years. The objects of the Company are to support, encourage and develop programs for social, economic and community development in Canada through voluntary service. The corporation reports to Parliament through the Secretary of State.

Crown Assets Disposal Corporation.—This Corporation was established in 1944 as the War Assets Corporation under the Surplus Crown Assets Act (RSC 1952, c. 260) and is subject to the Financial Administration Act (RSC 1952, c. 116). It replaced the War Assets Corporation Limited which had been incorporated in 1943 and its name was changed to Crown Assets Disposal Corporation in 1949. The Corporation is responsible for the sale of Federal Government surplus real estate and commodities located in Canada and at Canadian Government establishments throughout the world. It also acts as agent on behalf of foreign governments in selling their surplus assets located in Canada and has reciprocal agreements with a number of European countries for marketing Canadian surplus assets located in their respective countries. The Corporation is responsible to Parliament through the Minister of Supply and Services.

Defence Construction (1951) Limited.—Defence Construction (1951) Limited, reporting to the Minister of National Defence, is the Crown agency that procures for the Department of National Defence the construction and repair of buildings, structures and engineering works and professional engineering and architectural services.

The forerunner of the present company, Defence Construction Limited, began operation in November 1950 as a Crown agency responsible for awarding and supervising defence construction projects. Defence Construction (1951) Limited, incorporated July 12, 1951, under authority of the Defence Production Act, took over the responsibilities of the former agency. The company reported to the Minister of Trade and Commerce until Apr. 1, 1951, and from that date until Apr. 22, 1965 it reported to the Minister of Defence Production; it is now under the control and supervision of the Minister of National Defence.

The company's prime responsibility in contracting for all new construction and repair and renovation projects (except contracts under \$10,000 which are arranged for the Department of National Defence via the Department of Supply and Services) includes: participation in preparation of design; calling and reviewing of tenders; award and administration of contracts; supervision of construction work; and certification of progress claims for work completed. Activities cover four distinct spheres: defence projects in Canada for the Department of National Defence; all defence projects in Europe for the Department of National Defence under the North Atlantic Treaty Organization Agreement; defence construction for the United States Government in Canada; and, by arrangement, acting as the contract agents or technical advisers on the rendering of assistance to other federal departments and agencies.

The head office of the agency is located at Ottawa and branch offices are maintained at Halifax, Montreal, Toronto, Winnipeg and Vancouver in Canada and in Lahr, Germany.

Director of Soldier Settlement and Director of the Veterans' Land Act.—The Director of Soldier Settlement (under the Act of 1919) is also the Director of the Veterans' Land Act, and in each capacity is legally a corporation sole. For administrative purposes, however, the programs carried on under both Acts constitute integral parts of the services provided by the Department of Veterans Affairs.

Eastern Rockies Forest Conservation Board.—The Board was appointed in 1947 under the Eastern Rocky Mountain Forest Conservation Act which authorized an agreement between the Government of Canada and the Province of Alberta relating to the protection and conservation of the forests of that portion of the eastern slope of the Rocky Mountains which gives rise to the major tributaries of the Saskatchewan River. Its function is to determine the policy necessary to obtain the greatest possible flow of water in the Saskatchewan River system. The planning of programs of forest use and conservation is a joint duty of the Board and the provincial Forest Service; the administration of the conservation area is a function of the province. In April 1962, a Technical Co-ordinating Committee for Watershed Research was established to undertake study of the related needs defined by the Board. The Committee's programs, undertaken by seven co-operating agencies of the Federal and Alberta Governments, are co-ordinated by an officer of the federal Department of Fisheries and Forestry.

Funds for capital expenditures during the first seven years of the agreement were provided by the Federal Government with maintenance expenditures being paid by the Province of Alberta. In 1955 the province undertook the responsibility of financing both capital improvements and maintenance work. Currently, one member of the three-man Board is appointed by the Federal Government and the province has the right to appoint two members. The choice of one of the three members as Board chairman is vested in the province. The Board reports to Parliament through the Minister of Fisheries and Forestry.

Economic Council of Canada.—This corporation, established under legislation passed on Aug. 2, 1963 (SC 1963, c. 11), consists of a full-time chairman and two full-time directors appointed for a term not to exceed seven years and not more than 25 additional members to serve part-time and without remuneration. The Council is to be as representative as possible of labour, agriculture and primary industries, secondary industry and commerce, and the general public. Its functions are to advise and recommend measures that will achieve in Canada the highest possible levels of employment and efficient production so that the country may enjoy a high and consistent rate of economic growth and that all Canadians may share in rising living standards; to carry on the duties of the former National Productivity Council which were to promote and expedite continuing improvement in productive efficiency in the various aspects of Canadian economic activity; and to publish an annual review of medium- and long-term economic prospects and problems. The Council reports to Parliament through the Prime Minister.

Eldorado Aviation Limited.—This company was incorporated Apr. 23, 1953 to carry air traffic, both passenger and freight, for Eldorado Nuclear Limited and its wholly owned subsidiary, Northern Transportation Company Limited. It reports to Parliament through the Minister of Energy, Mines and Resources.

Eldorado Nuclear Limited.—Set up in 1944 under the name of Eldorado Mining and Refining (1944) Limited (the date was omitted in June 1952 and the name changed in 1968), the company's business is the mining and refining of uranium and the production of nuclear fuels in Canada. The company has also entered into contracts for the purchase of uranium concentrates from private producers in Canada. It reports to Parliament through the Minister of Energy, Mines and Resources.

Export Development Corporation.—This Corporation, under authority of the Export Development Act (SC 1968-69, c. 39), succeeded the 25-year-old Export Credits Insurance Corporation on Oct. 1, 1969. Its purpose is to facilitate the development of Canada's export trade by the provision of expanded insurance, guarantee, loan and other financial facilities which enable Canadian firms

to meet international credit competition. It reports to Parliament through the Minister of Industry, Trade and Commerce. Its affairs are administered by a 12-man board of directors. The chairman and seven other directors are appointed from among persons employed in the Public Service of Canada, the remaining four from private business. The Corporation's functions are: to insure Canadian exporters against non-payment by foreign buyers due to credit or political risks over which neither buyer nor seller has any control; to issue guarantees to persons in respect of the financing of exports; to make loans to foreign buyers or to issue guarantees in respect of the purchase of capital goods or major services from Canada involving extended credit terms; and to insure Canadian investments abroad against non-commercial risks such as war or revolution, expropriation or confiscation, or the inability to repatriate capital or earnings.

Farm Credit Corporation.—This Corporation was established on Oct. 5, 1959 (SC 1959, c. 43) for the purpose of providing for the extension of long-term mortgage credit to farmers. The Corporation also administers the Farm Machinery Syndicates Credit Act and is responsible to Parliament through the Minister of Agriculture.

Fisheries Prices Support Board.—The Board was set up under the Fisheries Prices Support Act of 1944 (RSC 1952, c. 120) to recommend to the Government price support measures when severe price declines occur. The Board functions under the direction of the Minister of Fisheries and Forestry and consists of a chairman, who is a senior officer of the Department of Fisheries and Forestry, and five members chosen from private and co-operative firms in the industry. The Board has authority to buy fish products and to sell or otherwise dispose of them or to pay producers the difference between a price prescribed by the Board and the average price the product actually commands.

Freshwater Fish Marketing Corporation.—This Corporation was established under the Freshwater Fish Marketing Act (SC 1968-69, c. 21) which received Royal Assent on Feb. 27, 1969, and given the function of marketing and trading in fish, fish products and fish by-products in and out of Canada with the objective of ensuring more orderly marketing for the benefit of the whole fishery and achieving higher and more stable prices for the catch. The Corporation received a grant for initial operating and establishment expenses but will conduct its operations on a self-sustaining basis without parliamentary appropriations; it is financed by bank loans with government guarantee of repayment or by direct loans. The Corporation consists of a board of directors composed of a chairman, a president, one director for each participating province and four other directors appointed by the Governor in Council for a term not exceeding five years. The Corporation reports to Parliament through the Minister of Fisheries and Forestry.

Industrial Development Bank.—The Bank, a subsidiary of the Bank of Canada, was incorporated in 1944 to supplement the activities of other lenders with particular consideration to the financing problems of small enterprises.

Medical Research Council.—Established by authority of the Government Organization Act, 1969, the Council is an autonomous agency of the Federal Government. It is composed of a president, a vice-president, and 20 members. The primary aim of the Council is the support and development of research in the health sciences in Canadian universities and affiliated institutions. It reports to Parliament through the Minister of National Health and Welfare.

National Arts Centre Corporation.—The Act establishing this Corporation (SC 1966, c. 48) was assented to July 15, 1966. The Corporation consists of a Board of Trustees composed of a chairman, a vice-chairman, the Mayors of Ottawa and Hull, the Director of the Canada Council, the President of the Canadian Broadcasting Corporation, the Government Film Commissioner and nine other members appointed by the Governor in Council for terms not exceeding three years, except for the first appointees whose terms range from two to four years. The objects of the Corporation are to operate and maintain the National Arts Centre, to develop the performing arts in the National Capital Region and to assist the Canada Council in the development of the performing arts elsewhere in Canada. The Corporation reports to Parliament through the Secretary of State.

National Battlefields Commission.—This Commission was established by Act of Parliament in 1908 to preserve the Historic Battlefields at Quebec City. The Commission is composed of nine members, seven appointed by the Federal Government and one each by the Provinces of Ontario and Quebec. The Commission is supported by annual appropriations of the Federal Government and is responsible to Parliament through the Minister of Indian Affairs and Northern Development.

National Capital Commission.—This Commission, a successor to the Federal District Commission, is a Crown agency created by the National Capital Act (SC 1958, c. 37), proclaimed Feb. 6, 1959. Headed by a chairman, it is made up of 20 members, representing the 10 provinces of Canada, and its work force fluctuates between 600 and 850, depending on the season.

The Commission is responsible for the acquisition, development and maintenance of public lands in the National Capital Region; it co-operates with municipalities by providing planning aid or financial assistance in municipal projects of benefit to the region; and advises the Department of Public Works on the siting and appearance of all Federal Government buildings in the 1,800-sq. mile National Capital Region. The Commission reports to Parliament through the Minister of Regional Economic Expansion.

National Harbours Board.—The Board was established by Act of Parliament in 1936. It is responsible for the administration of port facilities at the harbours of St. John's, Nfld.; Halifax, N.S.; Saint John, N.B.; Chicoutimi, Quebec, Trois-Rivières and Montreal, Que.; Vancouver, B.C.; and Churchill, Man.; the Jacques Cartier and Champlain Bridges at Montreal, Que.; and the grain elevators at Prescott and Port Colborne, Ont. The Board reports to Parliament through the Minister of Transport.

National Museums of Canada.—The National Museums of Canada is a departmental Crown corporation established Apr. 1, 1968, by the National Museums Act (SC 1967-68, c. 21). The corporation was established to join under one administration the four existing museum activities: the National Gallery of Canada; the National Museum of Man (including the Canadian War Museum); the National Museum of Natural Sciences; and the National Museum of Science and Technology (including the National Aeronautical Collection). The corporation reports to Parliament through the Secretary of State.

The Board of Trustees is composed of the Director of the Canada Council, the President of the National Research Council, and 10 other members. All members of the Board are appointed by the Governor in Council for fixed terms of office.

The purposes of the corporation, according to the Act, are "to demonstrate the products of nature and the works of man, with special but not exclusive reference to Canada, so as to promote interest therein throughout Canada and to disseminate knowledge thereof". To these ends the corporation is empowered to: (a) collect, classify, preserve and display objects relevant to its purposes; (b) undertake or sponsor research relevant to its purposes; (c) arrange for and sponsor travelling exhibitions of materials in, or related to, its collections; (d) arrange for the publication or acquisition and the sale to the public of books, pamphlets, replicas and other materials related to its purposes; (e) undertake or sponsor programs for the training of persons in the professions and skills involved in the operation of museums; (f) arrange for or provide professional and technical services to other organizations whose purposes are similar to any of those of the corporation on such terms and conditions as may be approved by the Minister; and (g) generally, do and authorize such things as are incidental or conducive to the attainment of the purposes of the corporation and the exercise of its powers.

National Research Council of Canada.—This is an agency of the Canadian Government established in 1916 to promote scientific and industrial research. The Council operates science and engineering laboratories in Ottawa, Halifax and Saskatoon; gives direct financial support to research carried out in Canadian university and industrial laboratories; sponsors associate committees co-ordinating research on specific problems of national interest; and develops and maintains the nation's primary physical standards. Other activities include the provision of free technical information to manufacturing concerns; the publication of research journals; and representation of Canada in International Scientific Unions. Patentable inventions developed in the Council's laboratories are made available for manufacture through a subsidiary company, Canadian Patents and Development Limited. The National Research Council consists of a president, three vice-presidents, and 17 members representing Canadian universities, industry and labour. The Council is incorporated under the Research Council Act (RSC 1952, c. 239, as amended) and reports to Parliament through a designated Minister, at present a Minister without Portfolio.

Northern Canada Power Commission.—The Commission was established by Act of Parliament in 1948 (RSC 1952, c. 196) to provide power to points in the Northwest Territories where a need developed and where power could be supplied on a self-sustaining basis; the Act was amended in 1950 to give the Commission authority to provide similar services in the Yukon Territory. The name of the Commission (formerly the Northwest Territories Power Commission) was changed in 1956. It is composed of the Deputy Minister of Indian Affairs and Northern Development, who is chairman, and two members appointed by the Governor in Council and reports to Parliament through the Minister of Indian Affairs and Northern Development.

The Commission operates three hydro-electric plants in the Northwest Territories (two on the Snare River near Yellowknife and one on the Taltson River near Fort Smith) and two hydro plants in the Yukon Territory (one on the Yukon River at Whitehorse and the other on the Mayo River near Mayo). Diesel-electric plants and distribution systems are operated at Fort Smith, Fort Simpson, Fort Resolution and Cambridge Bay, N.W.T., at Dawson, Y.T., and at Field, B.C.; diesel-electric power and central heating plants at Inuvik and Frobisher Bay, N.W.T., and at

Moose Factory, Ont.; and water supply and sewerage systems at Inuvik and Moose Factory. The Commission also operates in the Northwest Territories, on behalf of the Department, diesel-electric plants at Fort McPherson and Aklavik, and heating plants and domestic water supply and sewerage systems at Fort McPherson and Fort Simpson.

Northern Transportation Company Limited.—This Company was incorporated in 1947 under the title of Northern Transportation Company (1947) Limited, the date being omitted from the name in 1952. Previously a Company chartered under an Alberta statute, it has been a wholly owned subsidiary of Eldorado Mining and Refining Limited since that Crown company was established and carries out the business of a common carrier in the Mackenzie River watershed and western Arctic. The Company is responsible to Parliament through the Minister of Transport.

Polymer Corporation Limited.—This Corporation was incorporated in 1942 by Letters Patent and is subject to the Government Companies Operation Act (RSC 1952, c. 133) and the Financial Administration Act (RSC 1952, c. 116). Its head office and main plant are located at Sarnia, Ont., where it produces synthetic rubbers, latices, resins and related products. A subsidiary operation for the production of butyl is located in Belgium, and another subsidiary in France is responsible for production of general purpose and specialty rubbers for the European market. An international marketing subsidiary is located in Switzerland. The Company reports to Parliament through the Minister of Supply and Services.

Royal Canadian Mint.—The Royal Canadian Mint has been in operation since 1908. It was first established as a branch of the Royal Mint under the (Imperial) Coinage Act of 1870, and opened on Jan. 2, 1908. On Dec. 1, 1931, it became the Royal Canadian Mint and operated as a branch of the Department of Finance. In 1969, under the Government Organization Act (SC 1968-69, c. 27), the Mint became a Crown agency corporation, reporting to Parliament through the Minister of Supply and Services.

The latter change was made to provide for a more industrial type of organization and for flexibility in producing coins of Canada and other countries; buying, selling, melting, assaying and refining gold and other precious metals; and producing medals, plaques and other devices. The Mint has a seven-man Board of Directors appointed by the Governor in Council—the Master of the Mint who is its chief executive officer appointed to serve during pleasure, the Chairman who is appointed for a four-year period subject to re-appointment, and five other Directors, two from inside and three from outside the Public Service, who are appointed for terms of one to three years. The Mint now operates basically as a manufacturing enterprise, with the object of making a small profit. Financial requirements are provided through loans from the Consolidated Revenue Fund.

Science Council of Canada.—The Act establishing the Science Council of Canada (SC 1966, c. 19) received assent on May 12, 1966. The Council consists of 25 members each having a specialized interest in science or technology and four associate members chosen from among officers or employees of the Federal Government. Members hold office for not more than three years and associate members hold office during pleasure. All are appointed by the Governor in Council. The duties of the Science Council are to assess in a comprehensive manner Canada's scientific and technological resources, requirements and potentialities and to make recommendations thereon. The Council reports to Parliament through the Prime Minister.

St. Lawrence Seaway Authority.—The St. Lawrence Seaway Authority was established by Act of Parliament in 1951 (RSC 1952, c. 242) and came into force by proclamation on July 1, 1954. The Authority was incorporated 'or the purposes of constructing, maintaining and operating all such works as may be necessary to provide and maintain, either wholly in Canada or in conjunction with works undertaken by an appropriate authority in the United States, a deep waterway between the Port of Montreal and Lake Erie. The Crown corporation, Seaway International Bridge Corporation Limited, is subsidiary to the St. Lawrence Seaway Authority. The Authority is composed of a president, a vice president and a member, and reports to Parliament through the Minister of Transport.

Unemployment Insurance Commission.—The Commission was established under the provisions of the Unemployment Insurance Act, 1940, now the Unemployment Insurance Act, 1955 (SC 1955, c. 50). It is responsible for the administration of the Unemployment Insurance Act and for such other duties and responsibilities as the Governor in Council, on the recommendations of the Minister of Labour, requires. Its general functions are to provide for the compulsory insurance of employed persons with certain exceptions and, subject to regulations, to provide such persons with weekly payments for limited periods if they become unemployed.

The Commission has three commissioners, one of whom is the chief commissioner, and operates at three levels—a head office in Ottawa, five regional offices, and a number of area offices across the country. It reports to Parliament through the Minister of Labour.

Section 4.—Acts Administered by Federal Departments*

List of the Principal Acts of Parliament Administered by Departments of the Government of Canada

NOTE.—Copies of individual Acts of Parliament may be obtained from Information Canada, Ottawa, at prices of 25 cents and up, according to number of pages. Where duplications of certain Acts appear in the list, parts of these Acts are administered by the Departments given.

PART IV.—FEDERAL AND PROVINCIAL GOVERNMENT EMPLOYMENT

Federal Government Employment

The former Civil Service Commission became the Public Service Commission with the proclamation of the Public Service Employment Act on Mar. 13, 1967. Under this Act the Commission retains its status as an independent body responsible to Parliament for the appointment of qualified persons to or from within the Public Service and for the operation of staff training and development programs. It may establish boards to consider appeals against selections for appointments made from within the Public Service, to make recommendations on the delegation of its authority, and to inquire into allegations of political partisanship. The Commission's jurisdiction is extended to include a number of persons not covered by the former Civil Service Act. It is also given the prerogative of making extensive delegation of its authority to deputy heads to perform any of its powers, functions or duties, except those relating to appeals.

Under the amended Financial Administration Act and the Public Service Staff Relations Act, both of which were also proclaimed on Mar. 13, 1967, the Treasury Board is made responsible for the development of regulations, policies and standards governing all other aspects of personnel management in the Public Service including classification and pay, conditions of employment, collective bargaining and staff relations, organization and establishments, manpower development and utilization, and pensions and other employee benefits.

Manpower.—Treasury Board is concerned with the development, implementation, maintenance and evaluation of policies, programs and procedures directed toward the accurate determination, allocation, development and efficient utilization of employees needed in the Public Service to carry out programs effectively. These measures are aimed at improving the effective use of manpower resources in the Public Service and include recommendations on manpower planning, the determination of training needs and educational programs, and advice to departments and agencies on the design and implementation of systems to achieve improvements in manpower management.

Classification.—The Treasury Board develops and maintains classification systems and standards for the 73 occupational groups into which the Public Service is divided. Classification standards contain criteria for measuring the relative difficulty of jobs within groups of positions with like functions. One of the objectives of the new classification system which is substantially but not yet fully in place, is the extensive delegation of authority to departments to classify positions in order to strengthen the management process in departments and contribute to more accurate and expeditious classification decisions. Historically, both the responsibility for and the actual administration of classification has been done by central agencies but, under a program of progressive delegation, the Treasury Board has now granted authority to most departments to classify their own positions without reference to the Board Secretariat. The Board retains authority for the classification of jobs in key areas and, through its staff, provides classification services to small departments and agencies, monitors and audits the work of departments with delegated authority and responds to classification grievances and challenges.

Collective Bargaining.—For the purposes of the system of collective bargaining established by the Public Service Staff Relations Act, the Treasury Board is the employer for all employees in the Public Service, with the exception of a number of "separate employers", such as the National Research Council, the Defence Research Board and the National Film Board. The Treasury Board determines policies designed to promote good relations between the Government and its employees, negotiates collective agreements with the various certified bargaining agents and administers the terms of the agreements

which have not been delegated to departments. Much of the administration of agreements is so delegated and in such cases the Board provides interpretations and advice to departments as required. The Treasury Board prepares and presents the employer position on grievances which are referred to adjudication, and gives advice and assistance to departmental management at preceding stages in the grievance process. The Board presents the employer position concerning applications for certification by employee organizations and deals with the Public Service Staff Relations Board on the exclusion of employees from bargaining units.

Compensation and Conditions.—The Treasury Board develops, administers and monitors policies governing compensation and conditions of service for the Public Service, the Canadian Armed Forces and the Royal Canadian Mounted Police. It is the principal source of technical advice required in the bargaining process with respect to Public Service employees covered by collective bargaining and is directly responsible for policy on compensation and conditions for those employees who are outside the collective bargaining system.

The compensation policies developed apply to employees in Canada as well as to those in foreign countries and embrace all forms of payment made in return for services rendered including pay, leave and allowances. These policies, developed in relation to conditions of service, include the setting of appropriate standards for physical working conditions and occupational health and safety.

Staffing.—The Public Service Commission continues to perform its important role as guardian of the merit principle while ensuring the high quality of people within the Service. Every citizen has the opportunity of competing for positions in the service of his country. Ordinarily, any Canadian citizen may apply for headquarters positions at Ottawa but applicants for local positions in the administrative support or operational categories who are residents of the locality in which the vacancy occurs are given preference. Competitive examinations are announced through the press and other news media and through posters displayed on public notice boards of the larger post offices, offices of the Canada Manpower Centres, offices of the Public Service Commission and elsewhere.

The Commission's major task—staffing the Public Service according to merit—is done on an occupational basis. This is consistent with the revised classification system that divides the Service into six broad occupational categories which are further divided into groups of occupationally similar jobs. For each major occupation or group of occupations there is a program of development, recruitment, selection and placement. The activities are operated on the basis of comprehensive manpower planning including regular appraisals of employees, planned rotation, development and continuous recruitment techniques.

The new legislation provides the flexibility needed for the revised approach to government administration whereby competent managers should be allowed to manage and should be held accountable for their decisions. To facilitate staffing under this concept of management, the Commission may delegate any of its authority, except for appeals, to deputy heads wherever practical, and they in turn may delegate this authority with the approval of the Commission. The Commission must report to Parliament on delegation and changes in this delegation.

Staffing operations for the administrative support and operational categories are decentralized to the regional and local levels.

Appointments are made from within the Service except where the Commission believes it is in the best interests of the Service to do otherwise. Selection is made by competition or other processes of personnel selection designed to establish the relative merit of the candidates.

Competitions may be open to the public and to everyone in the Public Service or they may be limited to all or to a part of the Service; the latter are referred to as closed compe-

titions. Examinations for selection may be written, oral, a demonstration of skill or any combination of these. By these techniques, qualified candidates are placed on eligible lists which are valid for periods determined by the Commission. Appointments may be made from an eligible list for positions of a similar occupational nature and level. Closed competitions for promotion are generally conducted by the departmental staffing officers under work-sharing arrangements with the Commission. The Commission remains in touch with the departments to advise and instruct them in the administration of the Public Service Employment Act and its regulations.

Other processes used for appointments include continuous staffing and appraisals. The former is used when there is a recurring demand within an occupational group or there is some specialization within a group. Applications are reviewed and candidates are called for interview. The records of those who are not immediately called or appointed are put into a manpower inventory. This inventory is reviewed when a vacancy occurs and the employees in the inventory who are best qualified for that position are considered for the appointment. Within the Service, employees are regularly appraised to determine what training and development may be needed, to plan careers, and to decide promotions or transfers on the basis of performance and qualifications.

Appeals.—Under the Act, public servants who are candidates in a competition open to all or part of the Service may appeal the results of that competition to the Public Service Commission, except where no candidate is successful. When a promotion is made without competition, those who would have been eligible to apply if a competition had been held may appeal. Public servants may also appeal a recommendation from a deputy head for their demotion or release because of incompetence or incapacity.

Training and Development.—Consistent with the growing emphasis on managerial development and continuing education, the Public Service Commission offers interdepartmental courses in government administration, occupational training and management improvement. The Commission acts as the consultant and adviser to deputy heads on training matters and the training and development facilities of the Commission are available to employees to train them for specific occupations or for promotion within the administrative and managerial ranks.

Language.—The Public Service Commission has responsibilities concerning the requirements for bilingualism and biculturalism in the Public Service. It operates language training schools and carries out research and development to achieve various levels of proficiency needed by public servants. It is developing bilingual skills of senior executives so they may perform their duties effectively in either English or French. The program for this development gives these executives a sufficient appreciation of English and French cultures so they may use this understanding when developing and carrying out policy. The Commission also provides departments and agencies with advice and monitors the way in which language-usage policy is put to use.

Statistics of Federal Government Employment*

The current monthly survey of Federal Government employment, started in 1952, covers all employees of the Government of Canada; employees in this sense exclude the Governor General and Lieutenant-Governors, Ministers of the Crown and Members of Parliament, judges, persons under contract and members of the Armed Forces, but include Force members of the Royal Canadian Mounted Police. The survey is divided into two main categories: (1) departments and departmental corporations, and (2) agency and proprietary corporations and other agencies. Table 1 combines the two groups; Tables 2 to 5 cover employees in the first category and Table 6 covers employees in the second category.

* Prepared in the Governments Division, Financial Statistics Branch, Dominion Bureau of Statistics.

Departments and Departmental Corporations.—The salaries of employees in this group are paid from the Consolidated Revenue Fund. Definitions of classifications are as follows. "Salaried" employees include all persons paid on the basis of an annual salary rate with the exception of ships' officers who, although paid an annual salary rate, are subject to special treatment under the regulations made pertaining to the Financial Administration Act. The salaried staff are employed in departments and departmental corporations which are subject to regulation by the Treasury Board and for which the positions are outlined in the *Estimates of Canada*, or are established by means of supplementary Treasury Board Minutes. Thus, this category of employees includes persons subject to the provisions of the Public Service Employment Act plus salaried persons employed on the staffs of Cabinet Ministers and appointed by statute or by Order in Council, and also the salaried staffs of certain administrative branches of the Government that do not fall under the jurisdiction of the Public Service Employment Act.

"Prevailing Rate" employees are those who occupy continuing positions that are subject to prevailing rate regulations and are therefore paid on the basis of standard wage rates for similar work in the area in which the individual is employed; these employees are subject to the provisions of the Public Service Employment Act. Regulations made under authority of the Financial Administration Act govern the third group entitled "Ships' Officers and Crews".

These three groups comprise what may be called the "regular" employees of the government service. "Casuals and Others" are principally persons employed on a non-continuing basis.

3.—Employees in Departments and Departmental Corporations and Payrolls, by Month, April 1968 to March 1969

Table 5 presents statistics for departments and departmental corporations on the basis of a classification by function. The purpose of such classification is to supply a means of studying the operation of government without the complication that results from differences in administrative establishment. This analysis is useful in three ways. First, it permits a detailed study of employment by the Government of Canada according to the main purposes or functions and, since these functions are not subject to the periodic changes that alter the administrative structure of the Government, it is possible to develop a statistical series which, with minor exceptions, is consistent over an extended period of time. Secondly, since differences in administrative establishment are eliminated, it is possible to make meaningful comparisons between Federal Government expenditures on employment and similar expenditures by other levels of government. Thirdly, an analysis of the relationship between expenditures on employment and total expenditures may be made with regard to each function. Monthly figures on both the functional and departmental bases are available in DBS publication *Federal Government Employment* (Cat. No. 72-004).

Provincial Government Employment

Table 7 shows the numbers of persons employed by the various provincial and territorial governments, with the exception of British Columbia, in the month of December 1969, and gross payrolls (including retroactive pay, salary adjustments and overtime) for the year 1969. The only data available for British Columbia are for employees of institutions of higher education; these are included in the body of the table but not in the totals, all of which are, of course, exclusive of that province.

Of the total 1969 provincial and territorial government payrolls of \$2,110,392,000 (excluding British Columbia), departmental services employees received 60 p.c., employees of institutions of higher education 10.6 p.c., employees of provincial government enterprises 28.2 p.c. and employees of workmen's compensation boards 1.2 p.c.

PART V.—CANADA'S EXTERNAL RELATIONS*

Section 1.—Canada's International Status

The growth of Canada's international status is reflected in the development of the Department of External Affairs. From Confederation until 1914, Canada's position in the British Empire was essentially that of a self-governing colony, whose external relations were directed and controlled by the Imperial Government in Great Britain. Canada's first efforts concerning its own external relations, in the early 1900s, merely took the form of creating improved administrative machinery at home. In 1909, Parliament authorized the establishment of a "Department of External Affairs" placing it under the Secretary of State, with an Under-Secretary of State for External Affairs to rank as the

* Prepared (March 1970) by the Department of External Affairs, Ottawa.

permanent deputy head of the Department. The title of the Department indicated that it was to deal with Canada's relations with other governments within the British Empire as well as with foreign powers but its establishment brought no constitutional change. In 1912, the Department was placed directly under the Prime Minister who held the additional portfolio of Secretary of State for External Affairs and this situation obtained until 1946 when the first separate Secretary of State for External Affairs was appointed.

The Department began with a modest staff consisting of the Under-Secretary and six clerks. In 1912 an Assistant Under-Secretary was added, and in 1913 a Legal Adviser. Before the establishment of the Department, a High Commissioner had been appointed to represent Canada in London (from 1880) and an Agent-General in France (from 1882), and Canada, in the closing years of the nineteenth century, was also represented abroad by trade commissioners and immigration officials. However, none of these officials had diplomatic status. Negotiations with foreign countries were conducted through the British Foreign Office and dealings with other parts of the Empire through the Colonial Office, with Canadian representatives frequently included in negotiations. Canadian interests abroad were handled by British diplomatic and consular authorities and all Canadian communications to other governments were made through the Governor General.

The gradual recognition of Canadian autonomy in international affairs and the growth of Canadian responsibilities abroad made expansion of services and representation inevitable. After 1920, it became increasingly apparent that Canada's interests could no longer be conveniently handled by the British diplomatic and consular authorities and the Department began to develop into an agency for the direct administration of Canada's external affairs. In 1921, the Office of the High Commissioner in London was placed under its direct control. In 1925, a Canadian Advisory Officer was appointed in Geneva to represent Canada at various conferences and League of Nations Assemblies and to keep the Canadian Government informed of the activities of the League and of the International Labour Office. In 1927, a Canadian Minister was appointed to Washington.

An advance of the first importance in the Department's development came as a result of an agreement reached at the Imperial Conference of 1926 by which the Governor General ceased to represent the British Government and became solely the personal representative of the Sovereign. This brought about two changes: as the British Government was now without a representative in Canada, it appointed, in 1928, a High Commissioner to represent it at Ottawa; and after July 1, 1927, correspondence from the Dominions Office in London and from foreign governments was directed to the Secretary of State for External Affairs instead of to the Governor General.

In 1928, the former Agent-General in Paris was appointed Minister to France and, in 1929, a legation was opened in Tokyo. At about the same time, the United States, France and Japan opened legations in Ottawa. The expansion of the service was then interrupted by the depression of the 1930s and the next step in the exchange of diplomatic representatives with other countries was taken when Belgium sent a Minister to Ottawa in 1937 and Canada, in 1939, established legations in Belgium and The Netherlands.

With the outbreak of the Second World War, it became imperative that Canada have closer and more direct contact with other governments of the Commonwealth, with the Allied governments and with certain other foreign governments. The day after Canada's separate declaration of war on Sept. 10, 1939, it was announced that the Canadian Government would send High Commissioners to Australia, New Zealand, South Africa and Ireland, and these governments reciprocated. The appointment in 1941 of a High Commissioner to Newfoundland recognized the importance of that country to the defence of Canada. In 1941, by reciprocal agreement, Canada appointed Ministers to the Union of Soviet Socialist Republics and China. During the War, a single Canadian Minister was accredited to a number of Allied governments then functioning in London or Cairo—those of Belgium, The Netherlands, Czechoslovakia, Greece, Norway, Poland and Yugoslavia—and Canada received Ministers from each of these governments. After the liberation of France, this Minister, following a period in Algiers as representative to the French Committee of National Liberation, moved to Paris with the rank of Ambassador.

Another wartime development was the establishment of diplomatic relations with Latin America. In 1941, Canadian legations were opened in Brazil and the Argentine Republic (the Minister to the latter being also accredited in 1942 to Chile) and these countries sent their first Ministers to Ottawa. Diplomatic representatives were sent to Mexico and Peru in 1944 and to Cuba in 1945. Canada now has formal diplomatic relations with all 20 countries in Latin America and, because of developing ties with that area, a separate political division devoted to Latin America was set up in the Department in 1960.

Canada's external affairs services continued to expand following the War. Embassies were opened in a number of countries and, after 1947, High Commissioners were accredited to India and Pakistan and subsequently to Jamaica, Malaysia, Nigeria, Sierra Leone, Tanzania, Trinidad and Tobago, Uganda, Kenya and Malta.

Membership in the United Nations has increased Canada's responsibilities outside its own borders and Canada has been represented on various organs of the UN since its formation in San Francisco in 1945. A Permanent Canadian Delegation was established in New York in 1948 and a year later a Canadian office was opened in Geneva, the European headquarters of the organization. These offices, now called Permanent Missions, have since been expanded. Canada was one of the founding members of the North Atlantic Treaty Organization in 1949 and has been active in the Organization throughout the years of its existence. In 1952, on the establishment of a NATO Permanent Council, a Canadian Permanent Delegation was set up in Paris (since moved to Brussels) to represent Canada's NATO interest. There is also in Paris a Canadian Permanent Delegation to the Organization for Economic Co-operation and Development. In addition to representing Canada on these permanent international bodies and their various committees, officials of the Department of External Affairs are members of Canadian delegations at many international conferences.

Today, Canada conducts diplomatic and/or consular relations with some 115 independent countries, details of which are contained in Section 2 which follows. Canada's main international activities from January 1969 to the end of March 1970 are reported in Section 3 of this Chapter. A brief review of the present functions and organization of the Department of External Affairs is given on pp. 141-142; a broader coverage may be found in the monthly bulletin *External Affairs* (Information Canada, Ottawa, \$2 per year) and in the Annual Report of the Department.

Section 2.—Diplomatic and/or Consular Representation as at Mar. 31, 1970

1.—Canadian Representation Abroad

NOTE.—Changes in this listing subsequent to Mar. 31, 1970 and names of current representatives are given in *Canadian Representatives Abroad and Diplomatic Corps and Representatives of Other Countries in Canada*, published occasionally and obtainable from Information Canada, Ottawa.

Section 3.—International Activities, 1969-70

Subsection 1.—Canada and the Commonwealth

Over the years the Commonwealth has evolved significantly in size, shape and outlook from the compact and like-minded family of nations of predominantly European stock which first constituted the Commonwealth association at the time of the enactment of the Statute of Westminster in 1931. With its present membership of 28 sovereign states covering about one quarter of the earth's land surface, representing approximately 850,000,000 people of many races, colours, creeds and languages, and including both economically developed and developing countries as well as governments committed and uncommitted in the international power groupings, the Commonwealth more accurately reflects the world over which it spreads so widely. The interests of its members extend to all continents and the variety of issues demanding their attention has greatly increased during the decade of the 1960s and will undoubtedly continue in the 1970s.

Commonwealth members listed according to the year (if post-1931, noted in brackets) when membership was proclaimed are as follows: Britain; Canada; Australia; New Zealand;

India (1947); Pakistan (1947); Ceylon (1948); Ghana (1957); Malaya (1957)*; Nigeria (1960); Cyprus (1961); Sierra Leone (1961); Tanganyika (1961)†; Jamaica (1962); Trinidad and Tobago (1962); Uganda (1962); Kenya (1963); Malawi (1964); Malta (1964); Zambia (1964); The Gambia (1965); Singapore (1965)*; Guyana (1966); Botswana (1966); Lesotho (1966); Barbados (1966); Mauritius (1968); and Swaziland (1968). Nauru, which became fully independent in 1968, has "special" membership in the Commonwealth which entitles it to all the advantages of membership except attendance at Prime Ministers' Conferences. Through their association with the United Kingdom, which remains responsible for Foreign Affairs and Defence, the six West Indies Associated States (Antigua, Dominica, Grenada, St. Kitts-Nevis-Anguilla, St. Lucia and St. Vincent) also have an appropriate relationship with the Commonwealth.

One important aspect of Canadian foreign policy has been continuing membership in the Commonwealth. Canada has supported the extension and development of a vigorous and effective Commonwealth capable of exerting a beneficial influence for international peace and progress. Commonwealth ties give Canada a special relationship with this group of nations which, despite the diversity of their backgrounds, share important common ideals and traditions. These ties are characterized in the main by a spirit of co-operation developed through consultation and a continuous exchange of views. These exchanges at many levels take place not only in Commonwealth capitals but also in other countries as well as at the United Nations and in other international gatherings.

The Commonwealth Secretariat was established by a 1965 decision of Prime Ministers and is located in Marlborough House in London. The first Secretary-General of the organization is Mr. Arnold Smith, a Canadian whose appointment has been extended for a second five-year term. The Secretariat has the responsibility of organizing and servicing official Commonwealth conferences; it facilitates the exchange of information between member countries and generally stands at the service of all Commonwealth governments as a visible symbol of the spirit of co-operation which animates the Commonwealth. The Secretariat of the former Commonwealth Economic Committee and the Commonwealth Education Liaison Unit, both based in London, were amalgamated with the Commonwealth Secretariat at the end of 1966 to become the Commodity and Education Divisions, respectively. There is also a scientific adviser on the staff and in 1969, in compliance with the recommendations of the Commonwealth Prime Ministers' Meeting in 1969, a small Legal Division was established and an information officer and a medical adviser appointed. Canada's contribution to the 1969-70 budget of the Secretariat was \$289,827, which represented 19.2 p.c. of the total.

The single most important conference organized by the Secretariat is that of the Commonwealth Prime Ministers, the latest having been held in London in January 1969; present plans are that the Prime Ministers will next meet in Singapore in early 1971. Meetings arranged by the Secretariat in 1969-70 included the annual meeting of Commonwealth Finance Ministers and Senior Finance Officials in September 1969 held in Barbados, the fourth meeting of the Commonwealth Telecommunications Council held in London in April and a number of special or regional meetings including the African Regional Seminar on Youth held in Nairobi in November and a Seminar for senior Commonwealth diplomats on the changing patterns in the organization and conduct of foreign policy held in Singapore in March 1970. Immediately prior to the 1969 World Health Assembly Meeting held in Boston, Commonwealth representatives in attendance met to discuss plans for the next

* When Singapore, Sarawak and Sabah joined the Federation in September 1963, Malaya became Malaysia; Singapore separated from Malaysia in August 1965 to become an independent republic.

† In early 1964, Tanganyika and Zanzibar joined to form the United Republic of Tanzania.

Commonwealth Medical Conference and will do so again in May 1970 when the Assembly meets in Geneva.

Commonwealth developing countries continued to receive considerable sums of Canadian aid assistance. Canada's total allocated contribution under the Colombo Plan from its inception in 1951 to March 1970 was approximately \$1,233,000,000 (see pp. 201-202). Canadian allocations to Commonwealth countries in Africa through SCAAP amounted to more than \$108,000,000 for the period from 1960 to March 1970, and approximately \$75,000,000 was allocated to Commonwealth Caribbean countries from 1966 to March 1970.

Canada is an active participant in the Commonwealth Scholarship and Fellowship Plan (see also p. 203) contributing \$1,700,000 in the 1969-70 fiscal year and a total of \$9,900,000 since 1951. During the 1968-69 academic year, 347 students came to Canada under this Plan, most of them from developing countries. Canada also provides for the training and provision of teachers for service in Commonwealth countries and assists in plans for co-operation in technical education. During the academic year 1968-69, there were 918 Canadian teachers and university professors in the developing countries of South-east Asia, Africa and the Caribbean area, of whom 545 were in Commonwealth countries.

Subsection 2.—Francophonie

Heir to the great traditions of the French language and culture, Canada contributes fully to the establishment of special links between francophone countries. Its bilateral relations with France have developed greatly in recent years through political consultations, parliamentary visits, cultural and scientific exchanges, increased trade, officer exchanges, defence production co-operation, and the like. Links with other French-speaking countries have also been strengthened by the establishment of diplomatic missions and developing exchanges in a number of fields. A growing proportion of Canadian economic aid has been directed to francophone countries in Africa. Canada has played an active role in developing multilateral co-operation between French-speaking countries, a policy based on the recognition of the value to Canada of its ties with a multi-racial community of some 30 countries with 150,000,000 inhabitants, linked together by French culture. In keeping with this policy, Canada is a founding member of the Agence de coopération culturelle et technique which came into being as a result of the conference of the wholly or partly French-speaking states of the world held at Niamey, capital of the Republic of Niger, in February 1969. Canada is also a member of the Conference of Education Ministers of the Francophone States of Africa and Madagascar. Likewise, Canada is a founding member of the Conference of the Youth and Sports Ministers of Francophone Africa and Madagascar which came into being in Paris in December 1969. Canadian participation is on the basis of full federal co-operation with the provinces interested in these organizations.

Subsection 3.—Canada and the United Nations

Firm support for the United Nations is an essential element of Canadian foreign policy. Canada has contributed over the years to the efforts of the organization to keep the peace in various parts of the world, including the Middle East, Kashmir, the Congo, West Irian and Cyprus. In the 1956 Middle East crisis, Canada played a significant role in the establishment of the United Nations Emergency Force and participated in the Force until its withdrawal in 1967. In 1960, Canada responded to a UN request for support of its operations in the Congo by supplying military and civilian specialists and by pledging political and financial support. In 1962, Canada provided aircraft,

pilots and maintenance crews to assist the United Nations Temporary Executive Authority (UNTEA) in the exercise of its peacekeeping functions in West Irian. Canada maintains a large contingent in Cyprus (UNFICYP) to assist the UN to prevent open fighting between the Greek and Turkish communities. Canada has consistently advocated the strengthening of the peacekeeping capacity of the UN by means of advance planning at UN headquarters and advance cost-sharing arrangements and has taken steps to improve the readiness of its own forces and urged that others be invited to do the same. Despite slow progress and occasional setbacks, Canada continues to believe that the UN has an important role to play in the maintenance of international peace and security.

Canada also participates directly in the work of the UN through its membership in various UN bodies including all of the 13 specialized agencies and the International Atomic Energy Agency. The International Civil Aviation Organization (ICAO), with headquarters in Montreal, is the only specialized agency of the UN with headquarters in Canada.

In 1967, Canada completed a three-year term on the Economic and Social Council but continues as a member of most of the important subsidiary bodies of the Council such as the Economic Commission for Latin America, the Committee for Programme and Co-ordination, the Inter-Governmental Committee of the UN/FAO World Food Programme, the Commission on Social Development, the Statistical Commission, the Commission on Narcotic Drugs, the Committee on Housing, Building and Planning and the Commission on the Status of Women.

Canada also serves on the Governing Council of the United Nations Development Programme (UNDP) and the Industrial Development Board of the United Nations Industrial Development Organization (UNIDO). Canada participates directly on the Executive Committee of the Office of the United Nations Children's Fund (UNICEF), the Trade and Development Board of the United Nations Conference on Trade and Development (UNCTAD) and the Executive Committee of the Office of the United Nations High Commissioner for Refugees (since the Second World War, Canada has received approximately 350,000 refugees from overseas).

Canada belongs to 16 subsidiary bodies of the General Assembly, including the Committee on the Peaceful Uses of Outer Space, the Disarmament Commission, the Special Committee on Peacekeeping Operations and the United Nations Scientific Committee on the Effects of Atomic Radiation. Canada maintains Permanent Missions at both UN headquarters in New York and at the European Office of the organization in Geneva.

Canada pays 3.02 p.c. of the organization's regular budget, and is the eighth largest contributor. In the year ended Mar. 31, 1968, Canada's share of the gross expenses of \$154,915,250 (Cdn.) was approximately \$4,048,684. The cost to Canada of maintaining its contingent in Cyprus was about \$1,235,123 in 1968-69. In addition, Canada makes voluntary contributions to special UN programs such as the United Nations Development Programme (UNDP), the United Nations High Commissioner for Refugees (UNHCR), the United Nations Children's Fund (UNICEF), the United Nations Relief and Works Agency in the Middle East (UNRWA) and the World Food Programme (WFP).

Canada's total assessment and contributions to the UN, its specialized agencies and related bodies totalled approximately \$378,000,000 during the period 1945-68 and about \$39,000,000 in 1967. In 1967, Canada's quota (assessed share of capital) for the International Bank for Reconstruction and Development (IBRD) and the International Monetary Fund (IMF) was increased about \$45,405,000, of which some \$4,540,000 was paid during 1967. The Canadian subscription to the IBRD now totals \$856,215,150.

Canadian Financial Contributions to the United Nations.—In 1968-69, Canada's contributions to the United Nations system were as follows:—

<i>Agency</i>	<i>Percentage Assessment or Voluntary Contribution (V)</i>	<i>Contribution (Cdn. \$)</i>
United Nations—		
Regular Budget.....	3.02	4,048,684
Special Accounts—		
Force in Cyprus (UNFICYP) ¹	V	1,235,123
Congo Civilian Fund ²	V	500,000
Relief and Works Agency (UNRWA)—		
Cash.....	V	500,000
Food Aid.....	V	1,019,000

Related Organizations—		
International Committee for the Red Cross.....	V	20,000
United Nations Association in Canada.....	V	27,000

¹ Estimated. This figure from April 1968 to March 1969 represents the cost to Canada of maintaining its contingent in Cyprus after reimbursement for certain expenses by the United Nations; it does not include salaries and similar costs that Canada would have had to pay if the personnel had remained in Canada.

² This allocation to the Fund is a payment and not a disbursement.

³ Canada also contributed \$9,581 as its share of the costs of the UPU English Translation Service.

⁴ The President of the World Bank called for a replenishment of \$1,000,000,000 a year from 1968 to 1971. The Canadian share of the replenishment is \$67,200,000 (U.S.), which is 5.6 p.c. of the total. In addition, Canada agreed to make supplementary contribution of \$7,800,000, bringing its total to \$75,000,000 (U.S.) or \$51,000,000 (Cdn.), in addition to previous total Canadian contributions of \$55,760,500.

⁵ In 1966 there was a special 1-p.c. increase in the Canadian quota and subscription to the IMF and the IBRD, bringing the totals in both institutions to \$356,000,000, of which 10 p.c. or \$35,600,000 has been paid.

⁶ IFC invests in productive private enterprises in association with private investors and without government guarantee of repayment. As of Dec. 31, 1967, the total subscribed capital, all paid in gold or convertible currencies, was \$100,150,000, of which \$3,600,000 represented Canadian subscriptions.

Specialized Agencies.—Canada is a member of each of the 13 specialized agencies of the UN, and also of the International Atomic Energy Agency (IAEA), an autonomous international organization under the aegis of the UN. These agencies are invested with wide international responsibilities established by intergovernmental agreement, and act in relationship with the UN to assist in carrying out the terms of the Charter. Co-ordination of activities of the agencies is promoted by the Administrative Committee on Co-ordination established by the Economic and Social Council. This Committee is composed of the Secretary General of the UN, the executive heads of the specialized agencies, the Director General of the IAEA and other high officials of the UN. It con-

siders common administrative questions, inter-agency program co-ordination and projects or problems of special urgency to be undertaken jointly by several agencies. The agencies also report annually to the Economic and Social Council of the UN.

International Labour Organization.—The International Labour Organization (ILO) was originally established with the League of Nations in 1919 and became a specialized agency of the UN in 1946. It brings together representatives of governments, employers and workers from 118 (1967) member states in an attempt to promote social justice by improving living and working conditions in all parts of the world. The ILO is responsible for a number of technical programs financed by the United Nations Development Programme, as well as training programs under its regular budget. To further its work, the ILO holds numerous meetings during the year as well as an International Labour Conference in Geneva each June. At the 52nd Session of the Conference in June 1968 the principal debate focused on the ILO's role in the field of human rights.

Food and Agriculture Organization.—The Food and Agriculture Organization (FAO) celebrates its 25th anniversary in 1970. The first Conference was held in 1945 in Quebec City. It now has 119 members. The objectives of the Organization are to raise the levels of nutrition and living standards of its members and to improve the techniques of the production and distribution of food and agricultural, fishery and forestry products. To this end, the FAO Secretariat collects, analyses and distributes technical and economic information and encourages appropriate national and international action. A Council meets twice a year to give direction and policy guidance to the Secretariat; the FAO Conference, which is the governing body of the Organization, meets every other year. Headquarters are in Rome, Italy.

Canada participates actively in FAO activities and is a member of the Council, the Committee on Commodity Problems (CCP), the Consultative Sub-Committee on Surplus Disposals, the FAO Group on Grains, the North American Forestry Commission, the Commission on Fisheries and other FAO bodies. A number of Canadians are on the staff at Rome headquarters and many Canadians have undertaken assignments under FAO technical assistance programs. Canadian membership in the Organization is provided for by an Act of the Canadian Parliament passed in 1945. A committee of officials from Canadian Government departments (the Canadian Interdepartmental FAO Committee) maintains liaison between the FAO Secretariat and the Canadian Government.

The World Food Programme first began operations on a three-year experimental basis at the beginning of 1963 under the joint auspices of the FAO and the UN. The Programme provides food aid on a multilateral basis for emergency relief and promotes economic and social development, including feeding of children. At a UN-FAO Pledging Conference in New York in January 1970, \$215,600,000 was pledged toward a two-year program (1971-72). Canada, with a pledge of \$30,000,000, is the second largest supporter of the Programme.

World Health Organization.—The World Health Organization (WHO) came into being in 1948 and is one of the largest of the specialized agencies of the UN, having a total membership of 128. Functioning through the World Health Assembly (an organization composed of an Executive Board, a Secretariat and six regional committees), WHO acts as a directing and co-ordinating authority on international health matters. In addition, it provides advisory and technical services to help countries develop and improve their health services. The 23rd World Health Assembly was held in Boston in July 1969. The headquarters of World Health Organization is in Geneva.

United Nations Educational, Scientific and Cultural Organization.—The UNESCO was established in 1946 "to contribute to peace and security by promoting collaboration among the nations through education, science and culture in order to further universal respect for justice, for the rule of law, for human rights and fundamental freedoms". Its headquarters is in Paris and total membership in early 1970 was 126 states.

The Organization is made up of three principal organs—the General Conference which is the policy-making body, the Executive Board and the Secretariat. Representatives from member states make up the General Conference which meets every two years to consider applications for membership, elect the Executive Board, plan the program and approve the budget for the ensuing two-year period. At the 15th Session of the General Conference, held in Paris in October and November 1968, a Canadian, Mr. Graham McInnes, was elected to the Executive Board for a six-year term. The 15th Session approved a budget of \$77,400,000 (U.S.) for 1969-70, giving priority to the educational needs of the developing countries and to science activities, particularly of the application of science to development; the Canadian assessment rate is 2.84. Further information about the Organization may be obtained from the Canadian Commission for UNESCO, Ottawa.

International Civil Aviation Organization.—The ICAO, with headquarters in Montreal, was established in 1947 to study problems of international civil aviation and the establishment of international standards and regulations for civil aviation. ICAO operations are conducted through its Assembly, Council Committees and Secretariat. Canada has been a member of the 27-nation Council, the governing body of ICAO, since its inception. The Assembly, consisting of all member states, is convened at least once in a three-year period to decide on policy and vote on the budget.

International Telecommunication Union.—Canada is a member of the International Telecommunication Union (ITU), which traces its origin to the International Telegraph Convention of 1865 and the International Radio Telegraph Convention of 1906. The ITU is concerned with the maintenance of international co-operation for the improvement and use of telecommunications of all kinds for the benefit of the general public. It has 129 member countries. The International Telecommunication Convention which was adopted by the Plenipotentiary Conference of the Union at Montreux, Switzerland, in 1965 came into force on Jan. 1, 1967. Canada is represented on the 29-member Administrative Council, the executive organ of the ITU.

World Meteorological Organization.—Canada is a member of the World Meteorological Organization (WMO), a specialized agency of the UN since 1951 but developed from the International Meteorological Organization founded in 1878. The membership in 1967 was 131. The Fifth World Meteorological Congress, held in Geneva in April 1967, approved a program for the development of an improved world-wide meteorological system which was given the name "World Weather Watch". Canada is a member of the Executive Committee of the Organization.

Inter-Governmental Maritime Consultative Organization.—The Inter-Governmental Maritime Consultative Organization (IMCO) was established in 1959 to promote international co-operation on technical shipping problems and the adoption of the highest standards of safety and navigation and has a membership of 65 (1967). IMCO exercises bureau functions for International Conventions on Safety of Life at Sea, Prevention of Pollution of the Sea by Oil and Facilitation of International Maritime Traffic. Canada was elected to the Council of IMCO for a two-year term ended in 1969 and to the Maritime Safety Committee for a four-year term ended in 1969.

Universal Postal Union.—With a membership of 132 (1967), the Universal Postal Union (UPU) is one of the largest of the specialized agencies of the UN; it is also one of the oldest, having been founded in Berne in 1874 with the principal aim of improving postal services throughout the world and promoting international collaboration. The Universal Postal Congress is the supreme authority of the UPU and normally meets every five years to review the Universal Postal Convention and its subsidiary instruments. In the interim, UPU activities are carried on by an executive council of which Canada is at present a member, a consultative committee on postal studies, and an international bureau. The 16th Congress was held in Tokyo in 1969.

International Monetary Fund.—The IMF, established by the Bretton Woods Conference in 1944, came into being in 1945. It provides machinery for international consultation and collaboration on monetary, payment and exchange problems, including the promotion of exchange stability, the elimination of exchange restrictions, the establishment of a multilateral system of current payments and the expansion and balanced growth of international trade. Also, member countries under certain conditions may draw on the regular resources of the Fund, which now amount to some \$21,000,000,000 (of which the equivalent of about \$3,700,000,000 is in gold) or on the supplementary resources of \$6,000,000,000 made available in 1962 under the General Arrangements to Borrow, which have since been extended to October 1975. Canada's present subscription and quota in the IMF is \$740,000,000 (U.S.), of which 25 p.c. is payable in gold and the remainder in Canadian currency.

At the 1969 Annual Meeting, IMF Governors voted to activate a new facility which will provide for the distribution to member countries of some \$9,500,000,000 (U.S.) in Special Drawing Rights during the three-year period 1970-72. Increases in members' quota in the Fund were proposed in late 1969 which, if approved, will increase the regular resources of the Fund to some \$28,900,000,000 (U.S.). The Fund has 111 members. Canada has been represented on the Fund's Executive Board since its inception.

World Bank Group.—The World Bank Group, consisting of the International Bank for Reconstruction and Development, or World Bank, the International Finance Corporation and the International Development Association, is by far the largest of the multilateral aid-giving institutions and accounts for 11 p.c. of the capital flows to the less-developed countries from all multilateral and western bilateral aid agencies combined.

The *International Bank for Reconstruction and Development* or *World Bank*, like the International Monetary Fund, originated in the Bretton Woods Conference of 1944. Its early loans were made to assist in the postwar reconstruction of Europe but it has played an increasingly important role in the provision of financial assistance and economic advice to the less-developed countries.

By June 30, 1969, the Bank had made 636 loans totalling \$12,622,000,000 (U.S.). The resources available to the Bank for use in its lending operations are: (1) that portion of its subscribed capital which is paid in by governments and freely usable (\$1,912,000,000); (2) its retained income from operations (\$965,000,000); and (3) the funds it is able to raise by the sale of bonds to central banks and government agencies and on private capital markets. The World Bank's policy is to keep its lending rate as low as is compatible with the maintenance of its ability to borrow. The rate was raised from 6½ p.c. to 7 p.c. in August 1969. Maturity periods on loans usually range between 15 and 25 years. The level of the Bank's lending in the year ended June 30, 1969, was \$1,399,000,000. The greater part of the Bank's lending has financed so-called infrastructure projects which provide the framework supporting the rest of a country's economy but which generally do not attract private investors. About one third of the total loans has financed the development of electric power plants and transmission lines; another third has financed railways, roads and ports; and most of the remainder has been divided between industry and agriculture. In recent years, however, the Bank has been making loans for education and placing increasing emphasis on agriculture.

Canada's subscription to the World Bank is \$792,000,000 (U.S.) out of a total for all countries of \$23,036,000,000. Only 10 p.c. of each subscription is paid in, however, with the balance remaining as a guarantee against which the Bank is able to sell its own bonds in world capital markets. By selling such bonds and by selling loans from its portfolio to other investors, the World Bank augments its capital. As of June 30, 1969, the Bank had outstanding borrowings of \$4,081,000,000 (U.S.), mostly in the form of U.S. dollar bonds but also including issues denominated in Canadian dollars, Belgian francs, Deutsche marks, Italian lire, Netherlands guilders, pounds sterling, Swedish kronor and Swiss francs.

In all, the Bank has offered seven bond issues totalling \$135,000,000 (Cdn.) in the Canadian market. Maturities on these bonds ranged from one to 25 years and the interest rate from $3\frac{1}{2}$ p.c. to 7 p.c.

The *International Finance Corporation* (IFC) was established in 1956 as an affiliate of the IBRD to assist less-developed member countries to promote the growth of the private sector of their economies. IFC's principal objectives are to provide risk capital for productive private enterprises, in association with private investors and management; to encourage the development of local capital markets; and to stimulate the international flow of private capital. IFC makes investments in the form of share subscriptions and long-term loans, carries out standby and underwriting arrangements, and provides financial and technical assistance to privately controlled development finance companies. Of IFC's total subscribed capital of \$106,540,000 (U.S.), Canada provided \$3,600,000 (U.S.). In addition to its subscribed capital, IFC is able to finance its activities through loans from its parent institution, the World Bank. Total investments and underwriting commitments by IFC to June 1969 amounted to \$364,700,000 (U.S.). Commitments made during the fiscal year ended in June 1969 were \$92,900,000.

The *International Development Association* (IDA), also an affiliate of the IBRD, was established in 1960 to meet the situation of a growing number of less-developed countries whose need for, and ability to make use of, outside capital is greater than their ability to service conventional loans. Consequently, the terms of IDA development credits are designed to impose far less burden on the balance of payments of borrowing countries than conventional loans. Credits extended to June 1969 have each been for a term of 50 years, bearing no interest but with a service charge of $\frac{3}{4}$ of 1 p.c. per annum. IDA secures its resources from governments in the form of interest-free subscriptions and contributions and, to a smaller extent, from a portion of World Bank profits. As of June 30, 1969, resources made available to the Association totalled approximately \$2,300,000,000 (U.S.), of which Canada contributed \$154,500,000 (U.S.). Credits extended by the Association totalled about \$2,170,000,000 (U.S.).

International Atomic Energy Agency.—Formed in 1957, the International Atomic Energy Agency (IAEA) is an autonomous international organization under the aegis of the UN. The Agency was given a mandate to seek to accelerate and enlarge the contribution of atomic energy to peace, health and prosperity throughout the world in a variety of ways. Because Canada has been designated as one of the five members most advanced in nuclear technology, including the production of source materials, a Canadian representative has served on the IAEA Board of Governors since the inception of the Agency.

As of June 1969, IAEA membership consisted of 98 states. The organization of conferences and symposia of experts, the dissemination of information and the provision of technical assistance are among the methods that the Agency adopts to carry out its functions. With the rapid expansion in the use of nuclear power, much of the Agency's program is devoted to this field as well as to the use to which isotopes may be put in agriculture and medicine. An aspect of the IAEA activities that is becoming increasingly significant relates to the development and application of safeguard measures to ensure that nuclear materials supplied for peaceful purposes are not diverted to military uses.

International Law Commission.—By Article 13(1) of the Charter of the United Nations, one of the purposes of the UN General Assembly is to encourage the progressive development of international law and its codification. In order to implement and to assist in this function, the International Law Commission was created by a General Assembly resolution dated Nov. 21, 1947. It is composed of 25 members who are elected in their individual capacity. They serve for terms of five years and, in general, represent the main forms of civilization and principal legal systems of the world. As at Dec. 31, 1969, the 25 countries whose nationals formed the International Law Commission were: Afghanistan, Algeria, Argentina, Brazil, Britain, Chile, Dahomey, Finland, France, Greece,

Hungary, India, Iraq, Israel, Italy, Japan, Madagascar, Mexico, the Netherlands, Nigeria, the Union of Soviet Socialist Republics, the United Arab Republic, the United States, Uruguay and Yugoslavia. Canada's term expired in 1968.

Subsection 4.—Canada and the Conference of the Committee on Disarmament

"No single international activity . . . rates higher priority in the opinion of this Government than the pursuit of effective arms control and arms limitation agreements." These words, spoken by Canada's Prime Minister in October 1969 during the Throne Speech debate, clearly indicate the importance that is placed by the Canadian Government on the approach to world peace through arms control. Canada is an active member of the Conference of the Committee on Disarmament (CCD), the 26-nation UN negotiating body that sits in Geneva as successor to the Eighteen-Nation Disarmament Committee (ENDC). The CCD has before it the task of seeking agreements in such important areas of arms control as a comprehensive prohibition of nuclear weapons testing to include underground tests, seabed arms control and chemical and biological (bacteriological) weapons. One obstacle to the achievement of a ban on underground nuclear tests has been the problem of ensuring compliance through adequate verification. As a practical step that might facilitate a solution to the problem of verification, Canada sponsored a resolution, accepted at the 24th UN General Assembly, inviting member states to indicate their willingness to collaborate in the international exchange of seismological data to assist in the identification of underground tests. The coming into effect of the Non-Proliferation Treaty (NPT) on Mar. 5, 1970, is the most positive recent development in the whole field of arms control and disarmament.

Subsection 5.—Canada and the North Atlantic Treaty Organization

During the course of 1969 there were three NATO Ministerial Meetings. In addition, regular meetings of the Permanent Representatives were held continuously throughout the year at NATO headquarters in Brussels.

The first Ministerial Meeting of 1969, which was held in Washington on Apr. 10 and 11, had a special ceremonial aspect since it included activities to commemorate the 20th anniversary of the signing of the North Atlantic Treaty. For the occasion, Canada was represented by both the Secretary of State for External Affairs and the Minister of National Defence. One of the features of the ceremonial program was an address by United States President Nixon to a public meeting of the North Atlantic Council in Ministerial Session.

In their closed sessions, the NATO Ministers were concerned primarily with re-examining Alliance policy toward East-West relations in the aftermath of the Soviet Union invasion of Czechoslovakia. The Ministers reaffirmed the intention of their governments to continue the search for progress toward the establishment of secure, peaceful and mutually beneficial relations between East and West and their willingness to explore all appropriate openings for negotiations toward this goal. In particular, they expressed their desire to determine which concrete issues might best lend themselves to fruitful negotiation and better relations with the other side. The Ministers, therefore, instructed the Council in Permanent Session to draft a list of these issues and to study how a useful process of negotiation could best be initiated.

At the same time, the Ministers identified a new and growing area of interest to the Alliance by noting that their countries share common environmental problems which, unless squarely faced, could imperil the welfare and progress of their societies. The Council in Permanent Session was therefore instructed to examine how to improve in every practical way, the exchange of views and experience among the allied countries in the task of creating a better environment for their societies.

The Secretary of State for External Affairs used the occasion of the meeting to explain to the other members that, as indicated in the Prime Minister's statement of Apr. 3, Canada had decided to remain a member of NATO but to embark on a planned and phased reduction

of the size of the Canadian Armed Forces in Europe, in consultation with Canada's allies. A leading factor in this decision had been the magnificent economic recovery of western European countries and their increased ability to provide conventional forces for deployment by NATO in Europe.

The second NATO ministerial gathering of 1969 was a meeting in Brussels on May 28 of the Defence Planning Committee which includes representatives from all NATO countries except France. On that occasion, the Defence Ministers reaffirmed the validity of the Alliance's strategy of flexible response and the need for a credible conventional and nuclear deterrent. They provided guidance to the NATO military authorities for the preparation of force goal proposals for the period 1971-75 and approved the establishment of an On-Call Naval Force for the Mediterranean. A significant aspect of the meeting was the detailed outline given by Canada's Minister of National Defence of the proposed changes in Canada's military contribution to the Alliance.

On Dec. 4 and 5 the annual combined meeting of the North Atlantic Council and the Defence Planning Committee in Ministerial Session was held in Brussels. The principal subject examined by the Council was the report of the Permanent Representatives on the question of negotiations with the countries of Eastern Europe on subjects of mutual concern. The Ministers expressed the view that, by means of discussion of specific and well-defined subjects, it should be possible to progressively reduce tensions and thus facilitate discussion of the more fundamental questions separating the two sides.

The Ministers also reviewed the possibilities for negotiations on such subjects as arms control and disarmament, Germany and Berlin, and economic, technical and cultural exchanges. They identified mutual and balanced force reductions and environmental questions as subjects on which early discussions with the other side might be useful, and noted the references that had been made throughout the year by eastern European countries to the possibility of holding an early conference on European security. The Ministers agreed that careful advance preparation and prospects for concrete results would be necessary if such a meeting were to serve a useful purpose. Meanwhile, progress in the bilateral and multilateral discussions already under way would help to ensure the success of any eventual conference. It was accepted that such a conference should include participation by the North American members of the Alliance.

The Ministers also welcomed the opening, earlier in the fall, of talks between the United States and the Soviet Union on strategic arms limitations and the agreement reached by Permanent Representatives to establish a NATO Committee on the Challenges of Modern Society to further co-operation between members of the Alliance on environmental problems.

At the meeting of the Defence Planning Committee, the Ministers reviewed NATO force plans for 1970 and took note of the positive outcome of consultations with Canadian authorities concerning their forces for Europe which had been initiated following the Defence Ministers' meeting on May 28. In reviewing the activities of NATO's Nuclear Planning Group over the preceding year, the Ministers adopted two policy documents (concerning general guidelines for nuclear consultation procedure and for the possible tactical use of nuclear weapons in the defence of a treaty area) and agreed that Canada with Norway and Turkey would occupy the rotating seats on the NPG for an 18-month period beginning Jan. 1, 1970.

Canadian Contribution to NATO.—During 1969, Canada contributed to the military strength of the Alliance by maintaining an army brigade group and an air division in Europe and supporting forces in Canada. Canadian naval forces continued to be earmarked for assignment to the Supreme Allied Command Atlantic (SACLANT), for the defence of the North Atlantic region. Canada also participated with the United States in the defence of North America, which is part of the NATO area, through the provision of sea, land and air defence elements. The latter are assigned to the operational control of the North American Air Defence Command (NORAD).

Since 1950, Canada has contributed approximately \$1,910,000,000 to NATO infrastructure and related military programs and to mutual assistance to the European members of NATO. The mutual assistance program has consisted of transfers of equipment to member countries and aircrew training in Canada of NATO forces. The program has, of course, decreased sharply in magnitude in recent years, because of changing conditions and, in particular, the increasing ability of the European members to meet their individual defence requirements. Transfers of equipment now consist only of continued spares support, mainly from service stocks, of aircraft provided some years ago to Greece and Turkey.

Subsection 6.—Canada and the United States

Relations with the United States are of vital importance to Canada and constitute what is in many ways a unique experiment in international amity. Geography has made the two countries neighbours, community of interest has made them friends, and the demographic realities and economic patterns of today contribute to the conception of partnership which best characterizes the relationship between them. As an important example, Canada sells to the United States some three quarters of all its exports and buys almost one quarter of that country's exports, in an exchange of goods that now totals approximately \$20,000,000,000 a year. Co-operation in bilateral and multilateral affairs has marked this relationship in the past and experience has demonstrated a willingness in both countries to maintain and foster a spirit of sympathy and understanding in dealing with one another.

As indicated in the previous Sections and Subsections of this Chapter, both countries are active members of the United Nations and its many specialized agencies and both participate actively in the North Atlantic Treaty Organization (NATO), the General Agreement on Tariffs and Trade (GATT), the Organization for Economic Co-operation and Development (OECD), and other important international organizations. There are also many bilateral bodies that facilitate Canada-United States co-operation. The Ministerial Committee on Trade and Economic Affairs annually brings together members of the Cabinet in both countries for extensive discussions on a wide range of problems of bilateral and international interest. The Permanent Joint Board on Defence and the International Joint Commission are forums, respectively, for the discussion of North American defence and problems related to boundary waters, and many joint committees and agencies deal with other specialized subjects. But perhaps the most important factor in reinforcing the traditional friendship of the two countries is the continual intermingling of their peoples as private individuals across the shared border.

Subsection 7.—Canada and Latin America

Canada has formal diplomatic relations with all 20 Latin American republics and maintains 11 resident diplomatic missions in the area. Canada's relations with these countries have increased slowly but appreciably during the past few years in several fields.

Canada is a member of three inter-American organizations linked with the Organization of American States—the Pan American Institute of Geography and History, the Inter-American Statistical Institute and the Inter-American Radio Office. Since 1931, Canada has been a member of the Postal Union of the Americas and Spain which, although not an OAS organization, is closely related to that body. Canada joined the United Nations Economic Commission for Latin America in 1961. Since 1966, Canada has been a contributing member of the Centre for Latin American Monetary Studies which sponsors the conferences of the Governors of the Central Banks of the American Continent. In 1969, Canada became a member of the Inter-American Centre for Tax Administrators.

Canada has also been officially represented at a growing number of meetings and conferences concerned with Latin American and inter-American affairs. Canadian observer groups have regularly attended the annual ministerial meetings of the Inter-American

President Fidel Sanchez Hernandez of El Salvador, on Mar. 7, 1970, cutting a tape to open the first section of the expanded facilities of the port of Acajutla, made possible by a loan from Canada. The tape is held by the Canadian Ambassador to El Salvador and Costa Rica.

Economic and Social Council, the Pan American Health Organization, the Inter-American Cultural Council and the Inter-American Committee for the Alliance for Progress, all of which are organs of the OAS. In addition, observers are occasionally sent to meetings of the Inter-American Children's Institute and the Inter-American Indian Institute. During the past few years, Canada has been represented in an observer capacity at several high-level OAS meetings, including the Extraordinary Conference held in Buenos Aires in February 1967. Observer delegations have also attended conferences of the Ministers of Education on Economic Planning of Latin America, the meetings of the Board of Governors of the Inter-American Development Bank, the Inter-American Conference of Ministers of Labour and the annual meetings of the Inter-American Tropical Tuna Commission. In addition, Canada acted as host for the American Regional Conference of the International Labour Organization held in Ottawa in September 1966.

In December 1964, the Canadian Government signed an agreement with the Inter-American Development Bank under which Canada agreed to make available \$10,000,000 (Cdn.) in development loan funds for use in financing development projects in Latin America. This initial commitment has been followed in each of the five succeeding years by additional commitments of an equal amount bringing the total Canadian development loan funds now available to Latin America to a level of \$60,000,000 (Cdn.). As at September 1969, 14 Canadian development loans, totalling \$49,163,000, had been approved for financing development projects in the area.

Although the volume of Canadian trade with Latin America is still a small part of total Canadian trade, it has more than trebled since 1946. Argentina, Brazil, Cuba, Mexico and Venezuela rank among the top 20 Canadian export markets. The Canadian Government has directly facilitated Canadian exports to Latin America and indirectly assisted Latin American economic development through the provision of long-term credit under the Export Development Act; these credits now total more than \$275,000,000 (Cdn.).

Subsection 8.—Canada and Europe, Africa, the Middle East, the Far East and the Asian Development Bank

Canada and Europe.—While Canadian interest in most areas of the globe is increasing, Canada's relations with Europe remain of special importance. They are deeply rooted in Canada's origins, spring from the common cultural heritage which is shared with Britain and France and also reflect the ties with other European countries from which Canada's population is derived. They have been strengthened by Canada's substantial participation, on European soil, in two World Wars and by Canada's continuing stake in European security.

Canada's relations with Western Europe have developed steadily under the impulse of major Canadian interests in the area. These countries have long been major trading partners for Canada and its chief source of immigrants, and exchanges with them are having an increasingly important effect on Canada's cultural life and the development of its bicultural policy. Moreover, as a result of its growing prosperity and unity, Western Europe is likely to assume a greater importance for Canada because of the influence it wields, the possibility of fruitful co-operation it offers in many fields, and the element of balance it can provide in Canada's external relations. Canada maintains close and extensive bilateral relations with Britain and France in particular, as well as with most other western European countries, and has resident diplomatic missions in almost all of them. As indicated in preceding Subsections, Canada is also, along with a number of western European countries, an active member of NATO and the OECD, as well as of wider international associations such as the General Agreement on Tariffs and Trade (GATT).

In recent years Canada's relations with the Communist countries of Eastern Europe have developed considerably, despite the set-back suffered as a result of the Warsaw Pact intervention in Czechoslovakia. These relations have been characterized by an increase in the volume of trade and tourism, official and semi-official visits in both directions, and agreement on many outstanding issues including Canadian claims. Canada has resident diplomatic missions in Moscow, Prague, Warsaw and Belgrade and has established diplomatic relations with Hungary, Romania and Bulgaria through non-resident Ambassadors. Canada regards the development of mutually advantageous relations and exchanges with these countries as important contributions toward better East-West understanding and the ultimate goal of an equitable settlement of European problems.

Canada and Africa.—Canada in the past had a certain latent interest in Africa through the missionary and commercial activities of Canadians. Formal relations have evolved rapidly over the past 10 years, paralleling the accession to independence of the majority of former colonial territories. The increasing voice of these newly independent states in world affairs, the recognition of their development problems and the importance of the political issues affecting the whole African Continent have sparked this evolution.

Direct relations were first established with former British colonies as they became independent within the Commonwealth. Increasing contacts and diplomatic relations with the newly independent French-speaking African states soon followed in recognition of the bicultural outlook of this country and the important role played by these countries in African affairs. Canada now has diplomatic relations with almost all the independent African states and there are resident Canadian missions in 12 countries on that Continent. Coupled with the development of bilateral diplomatic and commercial relations has been the expansion of a significant program of Canadian aid to Africa. This program, with its English and French components, directs more than \$66,000,000 of aid funds annually to the African Continent.

Canada and the Middle East.—For the past quarter-century, the Middle East has been a focus of tension and conflict. During this period, Canada has participated in United Nations efforts to promote calm and stability in the area. It has also contributed substantially to measures to alleviate want among the victims of recurring hostilities.

Canada provided observers to the United Nations Truce Supervision Organization (UNTSO) and was closely associated with the formation of the United Nations Emergency Force (UNEF). Canadian troops served with UNEF in Gaza and Sinai from its inception until its withdrawal in May 1967. Canadian officers continue to serve with UNTSO, which is supervising the Arab-Israeli cease-fire.

Since the establishment of the United Nations Relief and Works Agency for Palestine refugees (UNRWA), Canada has been one of the leading contributors to that Agency. Canadian Government contributions have taken the form of cash, food and other supplies aimed at relieving human suffering in the Middle East. In emergency situations it has provided various forms of assistance through the International Red Cross.

Canada and the Far East.—For many years Canada has had important links, both official and private, with the Far East but over the past decade Canadians have become steadily more aware of their position as a Pacific as well as an Atlantic nation. With the development of modern transport and communications, the Pacific Ocean has ceased to be a barrier and as a result contacts with the countries and peoples of the Far East are increasing rapidly in number and variety. Many of these contacts are based on the growing volume of trade and other economic activity, including tourism; Japan, for example, is Canada's third largest trading partner and bilateral exchanges between the two countries amounted in 1969 to almost \$1,120,000,000. The links between Canada and Japan were greatly strengthened by the prominent role of Canada in Japan's 1970 World Exposition at Osaka.

Canada has continued its policy of developing relations with the People's Republic of China, on the premise that Peking should not be isolated but rather encouraged to become more involved in the international community. A series of meetings between Canadian and Chinese officials took place in Stockholm to discuss the terms of possible Canadian recognition of the PRC and the establishment of diplomatic relations between the two countries.

As a member of the International Commissions in Cambodia, Laos and Viet-Nam, Canada has an interest in the region formerly known as Indochina. Until the end of 1969, Canada maintained delegations on the Commissions in all three countries but, following the Cambodia Commission's decision on Dec. 31, 1969 to adjourn *sine die* and leave Cambodia, the Canadian delegation was withdrawn. In view of the inactivity of the Commission in Laos, Canadian representation on the Commission was reduced to a minimum by the beginning of 1970 but the Canadian Government affirmed its full intention of fulfilling its commitments in Laos. In Viet-Nam, Canada has maintained its delegation and is keeping a close watching brief as the talks in Paris proceed among the parties concerned.

Canada's relations with other countries of the Far East are also of increasing importance, a fact reflected in the Pacific Policy Review undertaken by the Government early in 1970. The long-term objectives of regional co-operation and development are fundamental to the future growth and stability of the Pacific region and particularly of Southeast Asia. Canada's interest in the area has been expressed through its participation in the Colombo Plan and, more recently, its membership in the Asian Development Bank, as well as through the presence of Canadian missions in the capitals of most Southeast Asian countries. Following the opening of a Canadian Embassy in Bangkok in late 1967 the groundwork was laid for negotiation of a commercial *modus vivendi* with Thailand, signed in 1969 by Canada's Minister of Industry, Trade and Commerce. The agreement places trade with Thailand on a most-favoured-nation basis and reflects the importance to Canadian exporters of trade with Thailand and with other Southeast Asian countries.

The Canadian Government has expressed its readiness to contribute to an international program for the economic rehabilitation of Viet-Nam after the end of hostilities and, as a member of the Asian Development Bank, is contributing to the Bank's technical assistance program and its special fund. Canada also continues to be a substantial contributor to United Nations agencies concerned with the economic development of Far Eastern countries.

Canada and the Asian Development Bank.—Canada is a member of the Asian Development Bank, a regional development agency established in 1966 with Articles of Agreement patterned broadly after those of the World Bank and the other international financial institutions (see p. 192). The Bank's subscribed capital stock is \$1,004,000,000 (U.S.), of which one half was paid in over the five-year period 1966 to 1970. The balance of member-country subscriptions will remain as a callable guarantee against which the Bank may sell its bonds on world capital markets. Asian regional countries, including Japan, Australia and New Zealand, have subscribed \$624,000,000 (U.S.) and non-regional countries have subscribed the remaining \$380,000,000 (U.S.). Canada's subscription is \$25,000,000 (U.S.), of which four instalments of \$2,500,000 each have so far been paid toward the 50-p.c. paid-in portion.

For its ordinary operations, to be financed from paid-in equity capital or any resources raised on world capital markets, the Bank expects to follow a pattern similar to that of the World Bank and to lend at rates of interest related to the rate which the Bank itself would have to pay on any bond issues. The present lending rate (December 1969) has been set at $6\frac{7}{8}$ p.c. As of December 1969, the Bank had made available 21 loans from these ordinary resources to Ceylon, Republic of China, Republic of Korea, Malaysia, Pakistan, Philippines, Singapore and Thailand and a number of other projects were under active consideration in these and other regional members.

The Bank also established Special Funds which may be provided to member countries on more flexible terms. Such special operations are financed by voluntary contributions and kept separate and distinct from the Bank's ordinary capital resources. Canada has agreed to make available \$25,000,000 (U.S.) over a five-year period for the Bank's special operations. As of December 1969, the Bank had supplied six loans from these Special Funds to Ceylon, Indonesia, Nepal, Philippines and Western Samoa.

Subsection 9.—Canada and the Organization for Economic Co-operation and Development

The Organization for Economic Co-operation and Development (OECD) was established in September 1961, as successor to the Organization for European Economic Co-operation (OEEC), which had been founded in 1948 by the countries of Western Europe to facilitate the reconstruction of their war-shattered economies. With the establishment of the OECD, Canada and the United States and later Japan (May 1964), joined with the countries of Western Europe to form what is today a major intergovernmental forum for consultation and co-operation among the advanced industrialized nations in virtually every major field of economic activity. At present, 22 countries are full members of the Organization, while Yugoslavia has a special status entitling it to participate in certain activities and Australia participates in part of the development activities of the OECD. The Organization's headquarters are in Paris.

The aim of the OECD is to facilitate the formulation of policy approaches which are conducive to the balanced economic growth and social progress of both member and non-member countries. The Organization provides an instrument for assembling and examining knowledge relevant to policy-making and also a forum, meeting the year round, for the exchange and analysis of ideas and experiences from all the member countries. (A recent example of this consultative process is the report on Canadian science policy issued in December 1969, one of a series of reviews of national science policy of OECD member countries.)

The Organization plays a significant role in the harmonization of international economic and financial policy and constitutes the main forum for consultations among developed countries on development assistance questions. The original focus of the OECD upon more traditional economic, trade and development matters has altered and new activities have been undertaken in the areas of agriculture, industry, science and technology, and manpower policy. This broader orientation places increasing emphasis upon the

qualitative, as well as the quantitative, aspects of economic growth and is most recently seen in the Organization's work on the problems of environment and welfare in the context of economic policy. At the first Ministerial Council in 1961, member countries approved a growth target of 50 p.c. for the decade to 1970; that goal has been considerably exceeded and a new growth target will be set for the coming decade.

The OECD brings together government officials as well as representatives of private business, labour unions, universities and other non-governmental bodies in both deliberative and consultative capacities, and provides for international liaison among such groups. Within Canada, liaison has been established with the business community through the Canadian Business and Industry Advisory Committee, which was established in 1962 and comprises representatives of the Canadian Chamber of Commerce, the Canadian Council of the International Chamber of Commerce and the Canadian Manufacturer's Association. Arrangements also exist for consultation with Canadian labour organizations, universities and other non-governmental bodies. Representatives of provincial governments frequently attend OECD meetings when subjects of particular interest to the provinces are being discussed.

Subsection 10.—Canadian External Aid Programs

The Colombo Plan.—The Colombo Plan for Co-operative Economic Development in South and Southeast Asia was conceived at the Commonwealth Meeting of Foreign Ministers held at Colombo, Ceylon, in January 1950. Although the Plan was initiated by Commonwealth governments, it is not exclusively a Commonwealth program. It is designed to assist in the economic development and the raising of living standards of all countries and territories in the general area of South and Southeast Asia. Its membership includes Afghanistan, Australia, Bhutan, Burma, Cambodia, Canada, Ceylon, India, Indonesia, Iran, Japan, Korea, Laos, Malaysia, Maldives Islands, Nepal, New Zealand, Pakistan, the Philippines, Singapore, Thailand, Viet-Nam and the United States; the latter is also engaged in a substantial program of economic aid in the same region.

The Colombo Plan Consultative Committee is the top policy-making body and consists of Ministers of the member governments. The Committee meets each year to survey the Plan's progress, assess the needs, and examine methods for filling in the gaps in resources and speed up the pace of development. The Committee last met in Victoria, British Columbia, in October 1969, and it was agreed at that time to extend the life of the Plan for another six years to 1976. As a consultative body, the Committee makes no collective policy decisions binding on member countries; a Council for Technical Cooperation, on which Canada is represented, meets regularly in Ceylon to develop the technical co-operation program of the Plan. The Colombo Plan Bureau in Ceylon services the Council, records all technical assistance given in the area, develops a program of intra-regional training and is responsible for the Plan's information program.

From the inception of the Plan in 1950 through March 1969, Canada made available a total of \$1,108,948,400 in aid for capital and technical assistance projects in South and Southeast Asia. Although 18 countries are now receiving capital assistance from Canada, the largest contributions have so far been made to Ceylon, India, Malaysia and Pakistan. The Canadian contribution consists primarily of direct assistance to various development projects, including equipment for multi-purpose irrigation and hydro-electric projects, power-generating plants, construction and fisheries projects and resources surveys, hospital equipment and cobalt therapy units, as well as educational and laboratory equipment and books. It has also included gifts of raw materials, commodities and foodstuffs, such as industrial metals, asbestos, fertilizer, wheat, wheat flour and butter, from the internal sale of which recipient governments have been able to raise funds to meet local costs of economic development projects.

Under the Technical Assistance Program, up to Sept. 30, 1969, more than 4,919 persons from all countries in the area had come to Canada under Federal Government auspices for

training in a variety of fields, the major ones being public administration and finance, agriculture, co-operatives, engineering, mining and geology, statistics, health education and social welfare. More than 595 Canadian experts had been sent abroad for service in Colombo Plan countries in such fields as fisheries, agriculture, engineering, mining and prospecting, co-operatives, public administration, education and vocational training, and public health. Other Canadians were employed on aerial resources-survey teams and on the installation and operation of capital equipment.

Commonwealth Caribbean Program.—In 1958, when the Federation of the West Indies was being formed, Canada undertook a five-year \$10,000,000-program of economic and technical assistance. Following the dissolution of the Federation in 1962, it was decided to continue providing assistance to its component territories—Jamaica, Trinidad and Tobago, Barbados, Guyana, British Honduras and the Leeward and Windward Islands—and, since then, \$81,490,000 in loans and grants have been made available to the area, including \$22,110,000 under the 1968-69 program.

Under this program, the area and its territories have been provided with two passenger-cargo ships for inter-island transportation, a deep-water wharf at St. Vincent, a residence for the University of the West Indies in Trinidad, port-handling equipment for five harbours and, for several of the smaller islands, schools, warehouses and freshwater supply facilities. Projects under way include a scheme for the expansion and improvement of Trinidad's dairy herds, the provision of rural schools in Jamaica, a prefabricated fish-packing plant, assistance to the University in Guyana, and a five-year program concentrating aid to the Eastern Caribbean region in the fields of education, air transport, water development and agriculture.

A substantial amount of technical assistance has also been given. During the year ended Sept. 30, 1969, training programs were arranged in Canada for over 1,280 students from the Commonwealth Caribbean, the fields of study including agriculture, engineering, fisheries, forestry, medicine and public administration. In addition, 486 Canadians served in the Commonwealth Caribbean, including teachers, soil surveyors, and advisers in the fields of statistics, legal drafting, housing, films, radio broadcasting, postal services, Indian affairs, technical education and harbour management.

Special Commonwealth Africa Assistance Plan.—In the autumn of 1960, the Canadian Government undertook, subject to Parliamentary approval, to contribute \$10,500,000 to a Special Commonwealth Africa Assistance Plan (SCAAP) over a three-year period beginning Apr. 1, 1961. This program arose from discussions at the Meeting of Commonwealth Prime Ministers in 1960. Although entirely a Commonwealth scheme, SCAAP is essentially the counterpart in Africa of the Colombo Plan in Asia. The main donor countries are Britain, Canada, Australia and New Zealand. Some of the newer Commonwealth members, particularly India and Pakistan, have been able to provide limited amounts of technical assistance in fields in which they have experience and specialized knowledge. All Commonwealth countries and dependent territories in Africa qualify for development assistance under the SCAAP program.

As occurred in other areas of Canada's expanding aid program, the level of aid to SCAAP increased in 1968-69 to \$25,563,500 from \$18,810,000 in the previous fiscal year. In 1965, the first Canadian development loan in Africa was extended to Nigeria in the amount of \$3,500,000 and, early in 1966, two loans totalling \$2,450,000 were granted to Tanzania. A \$2,000,000 food-aid grant in the form of wheat flour was made to Ghana.

Technical assistance programs continued to receive major emphasis. During 1968-69, 479 Canadian teachers, professors and technical experts were on assignment in Africa and 588 African students received academic and technical training in Canada.

Canadian capital assistance has concentrated on projects assigned a high priority by the recipient country and in which Canada has a high degree of expertise. These included aerial mapping and survey work, forest inventories, pulp and paper survey and

forest products development, irrigation and land reclamation, medical training and wheat research, geological surveys and mineral exploration, and the provision of equipment for schools and national parks. A major joint Canadian-Ghanaian effort was the building, equipping and staffing of the Trades Training Centre at Accra at an estimated cost to Canada of \$1,155,000.

Commonwealth Scholarship and Fellowship Plan.—The proposal to establish a Commonwealth Scholarship and Fellowship Plan was made at the Trade and Economic Conference held at Montreal in September 1958. The Conference envisaged a scheme of 1,000 university scholarships, of which Britain undertook to provide one half and Canada one quarter. The details of the proposed scheme were worked out at the Commonwealth Education Conference at Oxford in 1959. This Plan was designed to enrich the intellectual life of each country of the Commonwealth by enabling an increased number of its brighter students to share in the wide range of educational resources available throughout the Commonwealth and thus promote the equality of educational opportunity at the highest level. During the academic year 1968-69, there were 250 Commonwealth scholars in Canada; 120 were enrolled for doctorate degrees and 107 for master's degrees. The largest group of 101 were studying in the field of physical sciences, which is of direct value to their countries.

In 1965, Research and Visiting Fellowships were introduced as part of the Canadian contribution to this Plan. In 1967, one Research Fellowship was awarded for a full academic year and six Visiting Fellowships for shorter periods. These Fellowships enable senior educationists from other Commonwealth countries to visit Canadian universities and other educational institutions to carry out investigations, study or research in their particular field.

Assistance to French-Speaking States in Africa.—In April 1961, the Canadian Government announced an offer of assistance in the educational field to the French-speaking states in Africa and subsequently appropriated \$300,000 for this purpose for each of the years ended Mar. 31, 1962, 1963 and 1965. It was decided at the commencement of this program that emphasis should be placed on the provision of Canadian teachers for Africa. In 1968, an allocation of \$12,000,000 was provided to allow for development of a capital assistance program as well as expansion of technical assistance. In 1969, Canadian aid to francophone Africa totalled \$20,483,300. That year, 883 experts served in French-speaking Africa and 764 students received training in Canada.

Early in 1968, a special Canadian Government mission visited some of the French-speaking countries of North and West Africa to look into their development needs and make recommendations for Canadian assistance. A number of projects were agreed to in principle involving a Canadian commitment of at least \$30,000,000 over a three-year period (additional to existing aid levels). Included were agricultural projects in Morocco and Tunisia, educational projects for the Ivory Coast, Senegal and Niger, and natural resources assistance to Algeria and Cameroon. Health projects were proposed for Morocco, Tunisia, Cameroon and Niger and power projects for Tunisia and the Ivory Coast.

Latin American Program.—A bilateral Canadian aid program of Latin America was initiated in December 1964, when the Canadian Government concluded an agreement with the Inter-American Development Bank (IADB) by which Canada allocated \$10,000,000 in "soft" development loan funds for use in high-priority economic, technical and educational projects in Latin America. Up to Mar. 31, 1969, Canada had allocated \$51,500,000, including \$11,000,000 for 1968-69. Under the terms of the agreement, the IADB selects and processes proposed loan projects before submitting those considered suitable to the Canadian Government for its approval.

With the approval in the fiscal year 1969-70 of four loan agreements, the cumulative allocation of \$50,000,000 for Latin America has been committed. There are 14 loans, of

which half are for pre-investment studies by Canadian experts to determine the economic and technical feasibility of potential projects. Two major loans were made to Brazil, one for the building of an electric power project which will take four years to complete; Canadian engineering consultants will be retained to advise on the extension and improvement of the electrical distribution system of the region. The other, which will also employ Canadian consultants, is a study to determine the feasibility of building South America's first airport for supersonic and jumbo jets. A loan to Colombia will go toward the completion of one of the largest hydro-electric projects on the Continent on the Upper Anchicaya River. Another loan will assist the Colombian Government in establishing a national development fund to finance studies that will identify development projects and establish their technical and economic feasibility.

In November 1968, the Canadian International Development Agency (see below) took part in the Ministerial Mission to Latin America, which was designed to take a fresh look at Canada's relation with countries in that region. As a follow-up to that Mission, a Task Force on Latin America with representatives from several government departments and agencies including CIDA has been established to examine in greater depth the initial observations and suggestions of the Mission, and to submit to the Government recommendations on the possible nature and scope of Canada's future relations with Latin American countries.

Co-operation with the United Nations and its Specialized Agencies, and with other International Aid Programs.—In addition to the annual contributions made to the United Nations Development Program, which encompasses all UN programs of technical assistance, Canada arranges training programs in this country for individuals studying under the auspices of the different specialized agencies. This service is also extended to the technical assistance program of the International Co-operation Administration of the United States as well as to other international aid organizations. Up to Mar. 31, 1969, approximately 120 individuals had come to Canada through the various agencies. Assistance is also given by recruiting Canadians for service with the specialized agencies on specific technical assistance assignments in under-developed countries. Canadian allocation to multilateral organizations and agencies amounted to \$61,030,900 during 1968-69, making a cumulative total since 1951 of more than \$359,212,100.

The Canadian International Development Agency.—Since 1960, the operation and administration of Canada's external assistance programs have been the responsibility of the External Aid Office, renamed in 1968 the Canadian International Development Agency, under the direction of a president. Canada's allocations for external aid in the 1969-70 fiscal year amounted to \$338,100,000. Of this, \$269,700,000 was for bilateral assistance and \$68,400,000 was provided through multilateral agencies such as the United Nations, the World Bank Group and regional banks. Canadian bilateral aid continues to be used mainly to provide Canadian goods and services to the less-developed countries, although the minimum Canadian content for goods supplied has been reduced from 80 p.c. to 66½ p.c., permitting aid funds to be used for a much wider range of Canadian goods under competitive conditions.

During 1969 there were about 2,000 students and trainees from developing countries studying in Canada under CIDA auspices. About 700 Canadian teachers are working overseas through CIDA programs, mainly to improve indigenous educational capabilities. Under the technical assistance program, CIDA has some 250 experts abroad carrying out a variety of professional and technical jobs. CIDA in 1969 launched a program to assist voluntary and non-government agencies to increase the scale and scope of their own contributions to international development. Another important addition to CIDA's activities during 1969 was the establishment of the Business and Industry Division. In conjunction with the Department of Industry, Trade and Commerce, the Agency will help Canadian firms identify suitable opportunities for direct participation in the less-developed countries and use the various programs of special assistance available to them.

International Development Research Centre of Canada.—In May 1970, Royal Assent was given to legislation authorizing the establishment of an International Development Research Centre. Canadian-financed but international in character, the Centre will bring together experts from both the developed and the developing countries and provide them with the facilities and resources to conduct research into the problems of the economically under-developed regions of the world and into the means for applying scientific and technical knowledge to the advancement of those regions.

Forestry officers from India, Tanzania and Uganda, studying at the University of Toronto under the sponsorship of the Canadian International Development Agency, confer with a Canadian Forestry Service official at the Petawawa Forest Experiment Station at Chalk River, Ont.

Canadian Forces personnel push tents to flood victims in North Africa. From Trenton Air base, supplies have been sent to many areas of the world affected by natural disasters.

Winnipeg, capital city of the Province of Manitoba which in 1970 celebrated the 100th anniversary of its entrance into Confederation, has grown in that century from a Hudson's Bay Company trading post with a population of 215 to become Canada's fourth largest city. Within its metropolitan area live well over half a million people and its skyline is dramatic evidence of its continuing progress.

Four hundred air miles north of Winnipeg is another type of community, the city of Thompson. This is a planned community, built to accommodate the employees of the huge nickel-producing complex in that area. After about 14 years of existence, the city has a population of 23,000 persons who enjoy all the conveniences and services of dwellers in a large city.

will be found on p. vii of this volume.*

Section 1.—Census of Population

This Section presents in brief form the results of the limited census of population taken on June 1, 1966, with certain comparable data from earlier censuses. The 1966 Census did not include questions on ethnic origin, birthplace, religious denomination, language or mother tongue so that the 1961 data in Subsections 7 to 9 will remain the latest available until the results of the 1971 Census become available.

Detailed census data are published in a series of reports which are obtainable from Information Canada or the Dominion Bureau of Statistics. A list of these publications is available on request from the Information Division of the Dominion Bureau of Statistics.

Plans for the 1971 Census.—The increasingly complex problems of modern-day planning, administration and research have led to escalation in the demand for census information and more statistics will be expected from the 1971 Census than from any previous census. Regional development planning, urban renewal projects, education and manpower programs, poverty and welfare assistance measures, and marketing research analysis are some of the fields in which increasing needs of users have been articulated and evaluated during the planning stages for the 1971 Census.

The original legal purpose related to parliamentary representation remains but the Canadian census of today has far wider uses than to apportion electoral representation. Its importance hinges on its role as an inventory of the people—their numbers and local distribution, age and sex, language, ethnic and religious composition, educational attainment, occupational and industrial employment, income levels, housing and agricultural conditions. These facts are not only vital in themselves but they are especially significant when derived from a census which permits their analysis in relation to one another, and when viewed against the background of history and natural environment. Census data form a standard by which other indicators relating to the nation's well-being can be measured

with real meaning (birth and death rates, criminality, production, trade, wealth, unemployment, migration). Of critical significance are the uses made of the census results in the development of plans and the formulation of social and economic policy by government departments and the business community.

Content of Questionnaires.—In establishing the questions for the 1971 Census, DBS planning committees and work groups worked closely with representatives of other federal departments and agencies, many of whom participated actively in the groups. Careful consideration was given also to submissions received from provincial statistical agencies and from non-governmental agencies representing the business community, universities, town planning experts, etc.

Decisions to include or exclude specific items in the 1971 Census were largely based on: (1) the value of a question, e.g., for the administration of government or other important needs; (2) relative cost; (3) the ease or difficulty in obtaining reliable data; and (4) respondent work loads and tolerance. The evidence available from almost three years of investigation of users' needs together with the evaluation of a field testing program indicate that the 1971 questionnaire content represents a judicious balancing of the essential criteria, that is, it will satisfy the needs of users without imposing an unacceptable burden on respondents.

Changes in the questions for the 1961 Censuses of Population and Housing that have been recommended for 1971 result mainly from demands for more detail within existing subject fields. Education questions have been expanded to include vocational and occupational courses; net income of persons operating farms has been added; a question on language commonly spoken, recommended by the Royal Commission on Bilingualism and Biculturalism, has been added to those on mother tongue and official language; transportation agencies and town planners have effectively argued for inclusion of a question on address of place of work to determine relationships between where people work and where they live; and additional questions have been included on rent, fuel used, and vacation homes.

The Census of Agriculture is taken at the same time as the Censuses of Population and Housing. Questionnaire planning for the 1971 Census of Agriculture began in 1967 with the formation of a federal interdepartmental committee. During early 1968, meetings were held with provincial representatives in each province, with university users, with the federal Department of Agriculture, and with the Statistical Committee of the Farm Equipment Institute. Recommendations were reviewed by the interdepartmental committee and the resulting questionnaire was field-tested in October 1968.

In the 1971 Census of Agriculture, one general questionnaire will replace the four questionnaires used in 1961. Questions on irrigation and on forest products (on a reduced basis) form part of the 1971 general questionnaire. New questions relate to the use of fertilizers and sprays, and to the classification of the part-time work of farm operators by kind of work done. Additional items of farm machinery and equipment are included in the appropriate questions. In summary, farm operators will have approximately the same number of agricultural questions to answer in 1971 as in the preceding decennial Census of 1961. The questionnaire on non-farm holdings is being dropped since their importance is now negligible.

General Methodology.—The development of the methodology for the 1971 Census received its initial impetus from the evaluation of the quality of the 1961 Census and from the study of similar international experience, particularly in the United States. This research identified several important sources of error to which census statistics are subject—respondents may inadvertently or deliberately provide erroneous information, enumerators may influence answers in a number of damaging ways, and additional errors are possible at the data processing stage. The studies indicated that by far the greatest reduction in error could be expected if the role of the enumerator in the data collection process were minimized. Thus it became an objective of the 1971 testing program to develop methods that would reduce the role of the enumerator. These methods, involving self-enumeration, have several variations but a common goal is to have each adult member of every household

answer the census questions pertaining to himself and, where necessary, to consult relevant records. Households or persons who do not answer the census questions or who make significant omissions are contacted by telephone or canvassed by an enumerator. The "do-it-yourself" technique of enumeration is preferable to the traditional method where the enumerator must ask, interpret and record quick answers to intricate questions, given for all members of the household by any responsible member who happens to be home when the enumerator calls.

A series of census field tests, starting with a small pre-test in Ottawa in December 1966, followed by a complete test enumeration of the city of London in September 1967, a test of 6,000 households in Toronto in June 1968, and a rural test in four representative localities across Canada in October 1968, investigated the merits of various methods for the 1971 Census. Two of the tests assessed the advantages of self-enumeration, with questionnaires to be mailed to all householders for their completion and to be returned by mail to a central processing office. In the rural test, a combination of the traditional interview method and enumerator "drop-off" and "pick-up" of questionnaires was employed. Response to these tests indicated the feasibility of employing the self-enumeration techniques. A trial census was held in September 1969 in three localities—Sherbrooke, Que., St. Catharines, Ont., and rural areas centred around Souris, Man. As a result of this intensive testing program, field plans for the 1971 Census call for a system of enumerator drop-off of self-enumeration questionnaires to the householders for their completion and mail-back, to be employed in the larger urban centres. In smaller centres and rural areas, enumerators will drop off the questionnaires (including agriculture, where applicable) but, instead of the mail-back procedure, the enumerator will return to pick up the completed forms. In certain areas, such as the vast northern regions, the coastal outposts, institutions, military barracks, etc., which present special problems, the traditional methods of canvasser enumeration will be employed.

Sampling.—Self-enumeration and extensive sampling appear to offer the best combination to achieve the basic aims of the 1971 Census in terms of cost, quality and timeliness of data. New field methods have, as a main objective, the production of data of higher quality through the use of self-enumeration techniques; the degree to which sampling will be employed is directly related to the reduction of costs and to the production of more timely results. Sampling will contribute to error, particularly for tabulation "cells" with very small numbers of observations, but the reduction in error through self-enumeration is expected to be greater. The objective is to minimize total error at acceptable cost and because sampling will make a relatively small contribution to total error but will significantly increase operational efficiency and control, it will reduce cost; also, it will reduce the editing and processing workload and thus make a major contribution to the timely release of census results. In addition, sampling will reduce the burden on the respondent. There have been strong pressures to expand the range of inquiry of the census; without sampling, the additional questions could not have been included in the 1971 Census, partly because of the greater processing burden that would be imposed on DBS and partly because of the response burden that would be imposed on the public.

Sampling has been used as a census-taking technique in Canada since 1941. At that time, its use was restricted to the collection of housing data and a sampling ratio of 10 p.c. was employed. The procedure proved to be effective and was extended to a 20-p.c. ratio in 1951 to provide additional geographical detail. In 1961, its use was further extended to population questions, and a sample of 20 p.c. of households was asked additional questions about income, migration and fertility.

A major extension of this technique will be used in the 1971 Census, employing two questionnaires. A "short" questionnaire, containing only six basic population questions to be answered by everyone and nine housing questions to be answered by household heads, will be completed in two thirds of all households in Canada. A "long" questionnaire, containing the same 15 basic questions plus 20 housing and some 50 socio-economic popula-

tion items, will be answered by the remaining one third of Canadian households. Thus, compared to the 1961 Census, two thirds of all households are being asked substantially fewer questions (averaging eight per person as compared to 20 in 1961), and one third are being asked significantly more questions (averaging 48 per person as compared to 36 in 1961).

A great deal of intensive investigation of the relative costs and benefits of alternative sampling ratios for different combinations of questions preceded the final decision to recommend the one-third sample for all but the basic questions. The more extensive use of sampling is not expected to reduce the availability of 1971 Census statistics as compared to 1961 for either small geographic areas or detailed cross-classifications. Small numbers—5, 10 or even 15—contained in census tabulations have significant error associated with them. The error contributed by sampling will not make results any less acceptable than the results from 100-p.c. coverage. Even where the data are found by the user to be inadequate, they will frequently be sufficient to indicate problem areas and the need for more intensive survey information. By its nature, the census is a multipurpose information medium and, as such, cannot provide a sufficient depth of data for many particular purposes. One important reason why DBS is planning to expand its survey capability is to enable it to meet special information requirements that cannot be satisfied by census statistics.

Data Access and Dissemination of Results.—Plans have been made to improve substantially the effectiveness of the storage and retrieval of census data over the methods used in 1961 and 1966. The computer technology available for the 1971 Census has far greater capability than that of earlier censuses, and the computer experience of 1961 and 1966 is being incorporated into the systems design and into the software and hardware plans for 1971.

In developing new methods and programs to give users more effective and efficient access to census data, emphasis has been placed on extending the range and volume of tabulations to be made available in published, print-out and machine-readable form. Arrangements with provincial governments and other major user groups are being prepared whereby efficient access to census data can be made through better use of user-oriented census data automated files. Also, the extended capabilities of computer technology and programming will be of benefit to the increasing number of census data users requesting a wide and diversified range of special tabulations. For instance, a geographically referenced data storage and retrieval system (GRDSR) is expected to provide rapid and economic access for users requesting special tabulations for non-standard types of areas. User-oriented literature, catalogues and manuals on census data access will be prepared to ease and increase the utilization of the vast potential of the 1971 Census data.

Subsection 1.—Growth and Movement of Population*

Canada's population stood at 20,015,000 in 1966 as against 10,377,000 in 1931 and 5,371,000 in 1901. In the first decade of the century, when the West was being opened up for settlement, the gain of 34 p.c. was greater than in any other censal period. During that decade, about 1,760,000 immigrants entered the country and natural increase amounted to an estimated 1,000,000. However, since the total increase in population was 1,835,328, it is evident that a substantial number of people left the country during the period. In the 1911-21 decade, population growth dropped to 22 p.c. Military losses in the First World War and losses during the influenza epidemic, which together amounted to about 120,000, were factors in this decline. Although the flow of immigrants was reduced during

* An outline of the growth of population in Canada since the beginning of the seventeenth century may be found in Vol. I of the 1931 Census. Other accounts of population growth prior to the present century are included in Vol. I of the 1941 Census, Vol. X of the 1951 Census, and Bulletin 7.1-1 of the 1961 Census.

A special article on Recent Trends in Urbanization and Metropolitan Growth, prepared by Leroy O. Stone, Consultant on Demographic Research, Dominion Bureau of Statistics, appears in the 1969 Year Book, pp. 156-165.

the war years, it had been very heavy immediately preceding the War, so that the total number for the period (1,612,000) was very close to that for the previous censal period. At the same time, emigration was again extremely high and the increase in population amounted to 1,581,306, being an average of 2 p.c. a year compared with 3 p.c. in the 1901-11 period.

In the decade 1921-31, the rate of increase dropped to 18 p.c. Immigration fell to 1,200,000 and emigration was estimated at 1,000,000. Thus the increase in population, which amounted to 1,588,837, was only 229,000 greater than the natural increase. A feature of this period was the rapid growth of population in Western Canada, partly the result of immigration and partly the result of an influx of people from Eastern Canada. During 1931-41, the population increase was just under 11 p.c. During the depressed conditions of the 1930s, marriage and birth rates were significantly lower and only 150,000 immigrants came to Canada although, in addition, 75,000 Canadians returned from the United States. Emigration was also much lower than in the previous decades, amounting to an estimated 250,000. Natural increase was only 1,220,000, the crude birth rate falling from 27 per thousand of the population in the 1921-25 period to 24 per thousand in the succeeding five-year period and to 20 per thousand during much of the 1931-41 decade. During 1941-51, population growth was restored to pre-depression levels. Excluding Newfoundland which became part of Canada in 1949, it amounted to 19 p.c.; including Newfoundland it was 22 p.c. Much of the increase took place in the second half of the decade, reflecting heavy postwar immigration and sharp increases in the marriage and birth rates.

In the 1951-61 period, the population growth rate at 30 p.c. came close to approaching the extremely high rate of the first decade of the century. However, the two periods contrast in many ways. In the early period there was a wider dispersal of population increases as whole regions across the Continent were opened up; in the recent period there was a concentration of growth in urban communities although some spreading of population into newly developed northern areas took place. Natural increase accounted for about 75 p.c. of the growth. Although there was some decline in the death rate, the trend of natural increase reflected very closely that of the crude birth rate which began to rise during the War and remained high throughout the period. Net immigration accounted for the remainder of the increase; during the decade, 1,542,853 immigrants entered the country, more than double the estimated emigration. All provinces gained in population during 1951-61 but their rates of increase varied widely. The greatest increases resulted from a combination of natural increase and net migration which in the two large provinces of Central Canada and the two most westerly provinces accounted for over 87 p.c. of the total actual increase. In contrast, increases in the other six provinces were accounted for entirely by natural increase.

Canada showed a declining rate of population growth over the three five-year periods between 1951 and 1966. In the first period, 1951-56, an outstanding development of economic resources was experienced and, reflecting this expansion, population growth continued at a high level. Slightly more than 2,000,000 persons were added to the population in this period, a 14.8-p.c. increase. Similarly, the 1956-61 period showed a quinquennial rate of increase of 13.4 p.c., corresponding to a numerical increase of 2,157,000. In the 1961-66 period, however, the rate fell to 9.7 p.c., caused largely by a marked downturn in the crude birth rate. The actual number of births declined from 2,362,000 in 1956-61 to 2,249,000 in 1961-66 and immigration, as well, fell off from 760,000 to 550,000. It should be noted, however, that immigration increased each year after the low point of 1961; in 1966 it reached a total of 194,743, more than two and a half times the 1961 figure.

Provincial rates of growth in the 1961-66 period varied due to differences in rates of natural increase and migration among the provinces. Comparing the provinces in order of rate of growth over this period, the population of British Columbia showed an increase of 244,592 or 15 p.c. (roughly 3 p.c. per annum), attributable largely to a net in-migration

of 140,000; this was the only province where the rate of growth due to migration (57 p.c.) exceeded that due to natural increase (43 p.c.). Ontario recorded an increase of 11.6 p.c. between 1961 and 1966, when 724,778 persons were added to its population. Natural increase accounted for 67 p.c. of the total increase. The in-flow of immigrants was the heaviest among the provinces as more than one half of all immigrants in the five-year period gave Ontario as their province of destination.

Population growth in Quebec and Alberta, at 9.9 p.c. and 9.8 p.c., respectively, corresponded closely with the Canada rate. Natural increase in Quebec accounted for close to 88 p.c. of the total and Quebec was the only province other than Ontario and British Columbia to show an increase in net migration in this period. Newfoundland ranked fifth among the provinces in rate of growth, with an increase of 35,543 persons or 7.8 p.c. The remaining provinces all showed rates of growth of less than 1 p.c. per annum, Nova Scotia ranking last with a rate of 2.6 p.c. over the five years. Yukon Territory showed a slight decrease in population in the 1961-66 period (-1.7 p.c.) but in the Northwest Territories the growth rate, at 25.0 p.c., was above the provincial figures.

1.—Numerical Distribution of Population by Province, and Percentage Change from Preceding Census, Census Years 1921-66

NOTE.—Populations for the decennial census years 1871 to 1911 are given in the 1956 Year Book, p. 149. The populations of the Prairie Provinces in 1906, 1916, 1926, 1936 and 1946 will be found in the 1951 edition, p. 131.

Table 3 shows the natural increase and the total population increase for Canada and the provinces in the periods 1951-56, 1956-61 and 1961-66. The balance between the total increase in population and the natural increase during a period represents the difference between inward and outward movements, i.e., net migration. The net migration data shown for the provinces indicate the net movement of population arising partly from interchange of population between provinces and partly from persons entering and leaving the country.

TRENDS IN POPULATION GROWTH IN CANADA WITH SPECIAL REFERENCE TO THE DECLINE IN FERTILITY*

Births, deaths and migration are the three components of population change. Each is affected in its own way by a number of factors but the trends of births and deaths, at least, have conformed to a fairly clear pattern of development in the past. In the developing countries of today, the sharp decline in mortality has been the main factor for the unprecedented population growth and the variations in growth rates in the past one or two de-

cadec. On the other hand, in the economically developed countries including Canada, the variations in fertility have been the main factor for changes in population growth rates in recent decades. In the developed countries, death rates are very low and rather stable, and fertility (birth rates) has become the dominant and problematic factor in population change in recent years. Furthermore, the fall of birth rate in the world today, which has occurred in most of the industrialized countries, is a function of conscious and voluntary restriction of births through improved contraceptive practices. The recent fertility decline in Canada and its causes and implications for current and future population growth and structure should be viewed in this world setting.

The average annual rate of population growth in Canada since 1961 was the second lowest in this century, the lowest being in the depression decade, 1931-41 (Table I). Because natural increase (births minus deaths) and migration are dominant factors in Canada's population change, an examination of the relations between natural increase, net immigration and total population change in the period concerned is necessary to assess the direct contribution of each factor. The aim of the following discussion is to portray the dimension of recent population growth in Canada against the background of previous trends, to show how the declining trend has evolved in the 1960s, paying particular attention to the recent decline in fertility, and to consider its possible continuation in the future.

Total Growth and its Components

The decade 1951-61 had a population growth rate of 30.2 p.c., the second highest rate in this century. The growth rate fell sharply to 9.7 p.c. between 1961 and 1966 and, according to the post-censal estimates of population, has since continued to fall; the current annual rate of growth (1968-69) was only 1.5 p.c. In absolute numbers, the population increment between 1961 and 1966 was 1,777,000, the total reaching 20,015,000 in 1966 and an estimated 21,061,000 in 1969. Because of the open nature of Canada's population, in that the population is affected by external migration, natural increase and net migration combined to produce the observed fall in the nation's growth rate. However, the major factor of the population growth was the natural increase. Of the total change of 1,777,000 population between 1961 and 1966, 85.4 p.c. was attributable to natural increase and the remainder to net immigration; in 1961-62 and 1962-63 when the amount of net migration was very low, 94.5 p.c. of the increase was due to natural increase alone.

1.—NUMERICAL AND PERCENTAGE CHANGES IN THE POPULATION OF CANADA, INTERCENSAL PERIODS 1901-66 AND 1966-69

Period	Numerical Change	Percentage Change	Average Annual Percentage Change
	'000		
1901-11.....	1,835	34.2	3.4
1911-21.....	1,581	21.9	2.1
1921-31.....	1,589	18.1	1.8
1931-41.....	1,130	10.9	1.1
1941-51.....	2,503	21.8 ¹	2.2
1951-61.....	4,229	30.2	3.0
1951-56.....	2,071	14.8	3.0
1956-61.....	2,157	13.4	2.7
1961-66.....	1,777	9.7	1.9
1966-69 (estimated).....	1,046	5.2	1.7

¹ Includes Newfoundland in 1951 but not in 1941; excluding Newfoundland in both years, the change amounted to 2,241,000 or 18.6 p.c.

Table II shows clearly the separate contribution of each factor of population growth in recent years. The rates of net migration were obtained by subtracting rates of natural increase from the rates of population increase. Unlike the rates of net migration, the rates of natural increase have declined steadily since 1957. Advances in social and medical care had little effect on the already low crude death rates which remained fairly stable

since 1956 at an average of between seven and eight per 1,000 population. The infant mortality rate was 20.8 per 1,000 births in 1968. Thus, the death rate is stabilized at such a low level that further declines cannot be very great unless there is a major breakthrough in controlling the cardiovascular-renal diseases which account for a high proportion of deaths. The low death rate was reflected in the high life-expectancy at birth—68.7 years for males and 75.2 years for females—in 1965-67. On the other hand, like the trend in the rates of natural increase, there was a parallel decline in the national crude birth rate (births per 1,000 population) since 1957, which was reflected in the crude birth rates of the provinces, with variations in rates of decline. The most spectacular was the phenomenal 45.1-p.c. fall in the crude birth rate in Quebec where 88 p.c. of the population is Roman Catholic; it declined from 29.7 in 1957, the fourth highest rate among the provinces in that year, to 16.3 in 1968, the lowest among the provinces. During 1966, when the rate of decline was the highest, the national birth rate declined by as much as 10.4 p.c. Thus, it is clear that birth rate has been the dynamic element in the recent sharp fall in growth rate in Canada.

II.—CRUDE BIRTH, DEATH AND NATURAL INCREASE RATES, MIGRATION RATES AND RATES OF POPULATION INCREASE, 1956-69

NOTE.—The rates of net migration were obtained by taking the difference between rates of population increase and natural increase.

Year	Crude Birth Rate	Crude Death Rate	Crude Natural Increase Rate	Rate of Net Migration	Rate of Population Increase (per 1,000)
1956.....	28.0	8.2	19.8	4.6	24.4
1957.....	28.2	8.2	20.0	12.9	32.9

Trends in Birth Rate and Other Fertility Measures

The crude birth rate declined steadily from 28.5 in 1954 to 17.6 in 1968, the lowest rate ever recorded in Canada. Even during the depression period of the 1930s the lowest birth rate recorded was 20.1 in 1937. It is widely known that birth rate is the product of a number of variables and is affected by changes in the age-sex composition of the population to which it refers. Hence, birth rates standardized for age-sex composition of the population may be used for an analysis of the trend. Although in 1968 the standardized birth rate (standardized with respect to the age distribution of women in 1956) did not deviate from the crude birth rate, for most of the previous years of recent decline in birth rate there were significant differences between the two rates, the standardized rate being higher than the crude birth rate. For example, in 1963 the standardized birth rate, at 26.4, was 7.3 p.c. higher than the corresponding crude birth rate at 24.6. The declining trend in the difference between the crude birth rate and the standardized birth rate suggests that the unfavourable effect of age distribution on birth rate is decreasing. Thus, the abrupt fall in crude birth rate in the early part of the 1960s was partly the result of the unfavourable age composition of the population, i.e., women in the childbearing ages. This unfavourable effect may be attributed mainly to: (1) the decline of crude birth rate in the 1920s and 1930s with its impact on the female population of childbearing ages in the 1960s; (2) the increase in the number of births in the postwar period and the consequent

increase in the total population without a corresponding increase in the number of women in the childbearing ages; and (3) the long-run decline in the death rate, particularly in the very young and old ages where the main reduction of mortality occurred.

A more effective way of studying the trends and patterns of fertility is to examine the age-specific fertility rates and total fertility rates which are free from the effect of the variations in the proportion of women in the childbearing ages.* Table III and the following chart show clearly the magnitude and pattern of recent fertility decline.

* Age-specific fertility rates give the number of annual births per 1,000 women of reproductive period, by age. Total fertility rate is the sum of the age-specific fertility rates for single years of age of women; it is thus the average number of children born per woman (or 1,000 women) upon completion of the childbearing period, without mortality.

III.—PERCENTAGE CHANGE IN AGE-SPECIFIC FERTILITY RATES AND TOTAL FERTILITY RATES, 1926-37, 1937-59 AND 1959-68

NOTE.—Excludes Newfoundland for all years and the Yukon and Northwest Territories prior to 1951.

Age Group	Fertility Rates				Annual Average Change		
	1926	1937	1959	1968	1926 to 1937	1937 to 1959	1959 to 1968

AGE-SPECIFIC FERTILITY RATES, CANADA 1937, 1959 AND 1968

According to the fertility rates and standardized birth rates the steady fall of fertility in Canada started after 1959. Between 1959 and 1968 the total fertility rate declined by 38.0 p.c. from 3,935 (per 1,000 women) to 2,441 or, on an average, by 4.2 p.c. per annum. The recent drop in fertility rate was much higher than during the previous period of fertility decline of the 1930s; between 1926 and 1937 the average annual decline was only 1.9 p.c. There was also a difference in the pattern of the latest decline compared with that in the 1930s. In the latter period the rate increased with the age of women. The older the women the greater was the decline in fertility; about 54 p.c. of the decline in total fertility rate during this period was due to the decline in age-specific fertility rates for women over 30 years of age. In the recent period, the pattern was just the opposite. There were only minor differences in the rates of fertility decline between young and old ages, which suggested that the recent decline was concentrated in the younger ages. This is due to the fact that the decline of fertility rates for women in the most reproductive ages (20-30) has a greater effect on the total fertility rate, since absolute levels of age-specific fertility rates are higher for women in those ages than in the ages over 30. About 60 p.c. of the decline in total fertility rate was due to the decline in age-specific fertility rates for women under 30 years age.

The Marriage Factor

The factors influencing fertility are many and varied. Important factors affecting the birth rate during any period are the proportions of women married, the age at which they marry and the duration of marriage. Unfortunately, adequate data are not available to examine in detail the effect of these factors on the recent fertility decline in Canada. Although there has been a steady increase in the rate of illegitimate births in Canada, most of the births take place within marriage (including births that are illegitimately conceived but occur after marriage); illegitimate live births comprised only 9 p.c. of the total live births in 1968. Thus, changes and trends in marriage patterns generally affect the annual number of births.

Marriage patterns have undergone some notable changes in Canada over the past 25 or 30 years. After a slight upward trend during the 1930s, the mean age at marriage moved consistently downward between 1941 and 1961 and then again turned slightly upward, suggesting the emergence of a new trend in the marriage pattern since 1961. The mean age at marriage of women for first marriages (calculated from proportions of single women reported in censuses) increased from 21.4 years in 1961 to 21.7 years in 1966; the median age at marriage of all brides (calculated from marriage statistics) also shows a slight upward trend in the recent years.

The differences in marriage patterns can be clearly seen in the changes that have occurred in the proportions of women currently married or single at various ages within the 15-49 age group over the past few years. There was a decrease in the proportions of women married for the age groups under 25 years between 1961 and 1966 from 8.7 p.c. to 7.6 p.c. for the age group 15-19 and from 59.2 p.c. to 55.4 p.c. for the age group 20-24. A more penetrating analysis than has thus far been undertaken would be required to establish reasons for the slight upward trend in age at marriage and in the proportions married for the age groups under 25 years. However, a number of factors may be given as possible explanations, such as the tendency for more young people to go to university, the difficulty for young people to find jobs, the reduction in unplanned marriages following unwanted pregnancies as a result of the use of effective methods of birth control, and the non-availability of suitable male partners. The last factor is known as the "marriage squeeze"* where the males in marriageable ages are outnumbered by females in corresponding ages. The relative excess of brides is the result of the customary practice of women selecting older males for marriage. The conditions of availability were unfavourable for women between 1962 and 1966 or for the cohorts of women born between 1942 and 1946 when the ratios

* For details on the phenomenon of "marriage squeeze", see Donald S. Akers, "On Measuring the Marriage Squeeze", *Demography*, Vol. 4, 1967, pp. 907-924.

in the number of males aged 20-24 to the number of females aged 18-20 were less than 100.* The unfavourable situation for women may be because female children born in the baby-boom period reached marriageable ages while the appropriate grooms represented the smaller cohorts born during the depression period.

Part of the decline in fertility as measured by the crude birth rate, age-specific and total fertility rates may be attributed to the observed change in marriage pattern and the resulting distribution of population by marital status and marriage duration. With the data available, it is difficult to measure precisely the role of marriage on fertility level and pattern. However, using the data on proportions married among women and marital fertility rates (births per currently married women by age), an approximate estimate of the effect of changes in marriage pattern may be made. Assuming that all births are legitimate, total fertility is a function of marital fertility rates and proportion of women currently married; by keeping one of these factors constant and varying the other, it is possible to approximate the effect of each separately on change in total fertility rate between two points of time. It is assumed for this calculation that the higher the proportions of women married, the higher the risk of childbearing. The results of this calculation indicate that although nuptiality was not the chief factor of fertility decline in the recent years, it contributed to about 9 p.c. of the total fertility decline between 1961 and 1967. In this connection it may be noted that the postwar fertility recovery was due mainly to the marriage factor.

Because change in nuptiality pattern did not seem to have had any prominent effect on the change in total fertility in recent years, the declining birth rate or fertility rate should be attributed mainly to other factors such as: (1) the postponement of births by recent cohorts of women in the childbearing ages; and (2) the control of fertility, or the role played by the contraceptive pill on spacing and limitation of births.

Postponement of Births

With the available data it is difficult to know precisely whether the decline in fertility is indicative of a shift in the timing of childbearing or in the family size norms among couples. Both possibilities should be considered and are indicated in several studies, particularly data based on the United States. According to the former view, the decline in fertility is essentially the result of a shift in the timing of births from younger to older ages (postponement) which will have no marked effect on the completed fertility rate. The latter view is that fertility decline reflects a change in the reproductive pattern that will bring about a smaller family size.

One way of assessing the contribution of the postponement factor to the recent declining trend in fertility may be to examine order of birth and age of mother. The data on the average age of mother by parity (order of births) indicate that the average age of mother has gone up since 1964 for parity two and over. For those with one child, the recent trend is downward.

The recent trend in the distribution of births by order of births is consistent with the trend in the average age of mother. Thus, there has been a substantial increase in the proportion of births of first order and a small increase in the second order since 1963. All other orders showed a decrease during the same period. The reduction in childlessness among married couples and the increase in illegitimate rate might have contributed to the rise in first order births. The proportion of married women remaining childless in Canada has dropped from about 15 p.c. from 1906-07 cohorts to slightly above 5 p.c. for the cohorts born in the 1930s.† The decrease in the higher orders (three and over) coupled with an increase in the age of mother suggests the postponement of births by mothers with two or more births. The reduction in fertility for the older women may be attributed to the fact that they married young and have reached the size of family they desire to have and, with the present contraceptive techniques, can now control fertility more effectively

* See A. Romaniuc, "Fertility Projections by the Cohort Methods for Canada, 1969-1984", Census Division, DBS, 1970 (unpublished).

† A. Romaniuc, *op.cit.*

than could be done in the 1940s and 1950s. Since decline in the proportion of births occurred for higher order births, it is plausible that postponement of births is concentrated among mothers with two or more children.

Further, there appears to have occurred a divergence in the period and cohort fertility rates as a result of postponement of births.* A comparison of the cohort fertility rates for cohorts of women born between 1900 and 1950 with the period fertility rates indicates that some of the later cohorts of the 1920s and 1930s who had not yet completed their fertility in 1966 had already reached fertility levels much higher than those of the completed fertility† levels of the earlier cohorts. For example, the 1921 cohort had cumulative fertility rates of about 3,038 by age 40 and 3,175 by age 45, which were higher than the completed rates for the 1911 and 1916 cohorts.** Such unusually high fertility rates among younger cohorts of women suggest that there was a temporary inflation in fertility during the latter part of the 1940s and the 1950s which is partly responsible for the recent decline in fertility particularly at the older ages. Cohorts born in 1916-25 (approximately) who were about 25-34 years of age by 1950 and had postponed marriage and childbearing during the depression years, and cohorts born in 1926-35 (approximately) who were 15-24 years of age by 1950 had contributed to the inflation in fertility that occurred in the 1950s. However, these data do not explain the reason for the recent decline of fertility at the younger ages.

Control of Fertility

It has already been shown that the marriage factor has not played any prominent role in the decline of fertility in recent years, suggesting that young couples are either postponing their births or reducing the ultimate size of their families by effective means of birth control. The trend in fertility rates since 1959 fits in well with the hypothesis that the decline has been due to the widespread use of the contraceptive pill. Two things may be noted before assessing the role of the pill. First, the low fertility level in the 1930s was not achieved by the use of the pill but by other methods of fertility control then in use. Secondly, before the pill came into wide use in Canada (it became available on a prescription basis only in 1961), the fertility rate had already started to decline (since 1959). Thus, it is evident that the present decline in fertility level probably could have been achieved by rational fertility control without the use of the pill.

The findings of a study on the use of oral contraception in the United States in 1965, based on survey data, suggest that the contribution of oral contraception to the recent decline in the birth rate in that country was substantial for young married couples.‡ Similar data are not available for Canada, but preliminary results of the recent fertility inquiry in Metropolitan Toronto showed that nearly one half of the women using contraceptives were using the oral pill and that about two thirds of the present oral users began to use them for the first time after January 1965. It was also observed that women with no children and those with four or more children had a clear preference for the pill over the other methods of contraception.*** Such a preference for the pill among contraceptive users is consistent with the fertility decline among young and older women observed earlier. Perhaps a major effect of the use of the pill might have been longer postponement of births and avoidance of unwanted conceptions mainly because of its greater efficiency than other contraception methods.

* Period measures of fertility deal with the childbearing experience of persons during a particular year or specified period of time. A cohort measure, on the other hand, deals with the childbearing experience of a particular group of persons, identified either by a common time of marriage or common time of birth through their entire reproductive span.

† The "completed fertility rate", which is sometimes called "average size of family", is the average number of births (per 1,000 women) that an actual group of women has by the end of the childbearing span (age 50 in most cases).

** The figures are taken from unpublished material prepared by Jacques Henripin for the 1961 Census monograph on fertility in Canada.

Prospects for the Future

The future course of fertility in Canada depends mainly upon whether the current completed fertility rate will remain constant, fall or rise in future. It is difficult to predict whether young couples will have fewer children than the cohorts preceding or whether their lowered fertility may be made up in later years. It is possible that postponement of births may lead to revising expectations downward with the new norms regarding family formation, and consequent decline in ultimate family size. Whatever the precise reason for the declining trend in fertility, family size of not more than three children has become the accepted pattern among young couples. The findings on fertility expectations based on surveys conducted in the United States support such a view. According to one study, "virtually all American couples consider at least two children as desirable, and most achieve that number unless they are subfecund".* In several papers, Freedman has stated that about 90 p.c. consider two to four children "ideal for the American family".† Furthermore, a potent factor likely to affect the future fertility in both its quantity and its timing is the increase in the reproductive competence, whether by way of development of better methods or enlarge knowledge of available contraceptive procedures, or greater diligence in their employment.** Thus, when children are born and how many will be born appear to be increasingly rational decisions by couples, based on immediate economic and social circumstances.

As for absolute number of births and crude birth rate, they are likely to increase in the near future even if the current fertility rates do not increase, because of the expected increase in the size of the future childbearing population. According to the DBS current population estimates and most recent population projections (Series B), between 1968 and 1971 the number of women in the most reproductive age groups, 20-24 and 25-29, will increase from 829,000 to 952,200 and from 682,800 to 795,000, respectively.‡

Assuming that the 1968 age-specific fertility rates will remain constant until 1971, expected births and crude birth rate were calculated for 1971 using the projected total population and women aged 15-49. The results show that between 1968 and 1971 the annual number of births will increase from 364,310 to 401,280 and the birth rate from 17.6 to 18.5. Thus, it may be expected that the continuing decline in birth rate will abate in the near future, resulting in a slight upward trend in the rates of natural increase and total population growth. According to the projected figures (Series B), the increase in the population of Canada will be 8.14 p.c. between 1969 and 1974, and 28.1 p.c. between 1969 and 1984, which is equal to an average annual increase of 1.9 p.c. during the next 15 years as against the current annual increase of about 1.5 p.c. It may be noted, however, that the anticipated rate of population increase for the next 15 years is much lower than that of the past 15 years.

Subsection 2.—Urban and Rural Population

All cities, towns and villages of 1,000 or more population, whether incorporated or not, were classed as urban in the 1966 Census; also classed as urban were the urbanized fringes of these centres, where the population of the city or town together with its urbanized fringe amounted to 10,000 or more and where the density of the fringe was at least 1,000 persons per square mile. The remainder of the population living outside of the urban centres and suburban fringes was classed as rural.

Table 4 shows that, by 1966, close to 74 p.c. of the population of Canada lived in urban areas, according to the census definition. The degree of urbanization in the prov-

‡ "Population Projections for Canada, 1969-1984", *Analytical and Technical Memorandum No. 4*. Census Division, DBS. Processed April 1970.

inches, as measured by the portion classified as urban, ranged from 80 p.c. in Ontario to 37 p.c. in Prince Edward Island. However, although almost three quarters of the Canadian population was urbanized, only three of the ten provinces had surpassed this level of urbanization—Ontario with its 80 p.c., Quebec with 78 p.c. and British Columbia with 75 p.c. Of the seven remaining provinces, five were over 50 p.c. urbanized—Newfoundland, Nova Scotia, New Brunswick, Manitoba and Alberta.

In Table 4 the rural populations of the provinces are further classified as rural non-farm or rural farm. For census purposes, persons living on holdings of one or more acres with sales of agricultural products of \$50 or more in the previous year are classed as residing in rural farm areas. Thus, the population living on "farms" would include some persons not connected with farming operations and who derived their income from non-agricultural pursuits. In 1966, among the provinces, Saskatchewan and Prince Edward Island had the highest percentages of rural farm population—29 p.c. and 28 p.c., respectively.

4.—Number and Percentage of the Population classified as Urban and Rural (Non-farm and Farm), by Province, Census 1966

Subsection 3.—Populations of Incorporated Cities, Towns and Villages

The population of all incorporated cities, towns and villages is classified by size group in Table 5 for the census years 1951, 1956, 1961 and 1966. During the 1961-66 period, the number of such centres increased by 57 and the proportion of the total population living in them rose from 60.7 p.c. to 63.1 p.c.

The trend toward an increased concentration of the population in the larger urban centres continued in the 1961-66 period. In the five-year interval, the number of incorporated cities and towns of 50,000 or over rose from 29 to 40 and the proportion of the total population in these larger centres increased from 29.0 p.c. to 32.9 p.c. In contrast,

The centre of Toronto like the cores of other large Canadian cities has taken on an entirely new visage during the past few years. Old familiar and once prominent buildings are surrounded and dwarfed by sky-reaching structures.

Chicoutimi North, a city of about 13,000 is part of a fairly large concentration of people living on both shores of the Saguenay River, which flows southward from Lac St. Jean into the St. Lawrence River about 150 miles east of Quebec City. Their livelihood is based on the large pulp and paper, water power and aluminum industries of the area.

although urban centres of 1,000 to 50,000 in size also increased in number from 893 to 921, the proportion of the population residing in these centres fell from 29.3 p.c. in 1961 to 27.9 p.c. in 1966. Similarly, the number of incorporated towns and villages under 1,000 rose from 1,039 to 1,057 in the 1961-66 period but their proportion of the population fell slightly from 2.4 p.c. to 2.2 p.c.

¹ All the municipalities on Île Jésus were amalgamated to form the city of Ville de Laval in 1965.

The 961 incorporated urban centres in Canada having a population of 1,000 or more at the time of the 1966 Census are listed alphabetically by province in Table 7 and their populations given for the two census years 1961 and 1966. Each population figure is for the boundary in effect at the time of the indicated census.

7.—Incorporated Cities, Towns and Villages having Populations of 1,000 or Over, by Province, Census Years 1961 and 1966

NOTE.—Population tables are based on areas as incorporated at each of these dates; a change in municipal boundary since the preceding census is indicated by an asterisk (*). Urban centres are designated in this table by the following abbreviations: c.=city, t.=town and v.=village.

Subsection 4.—Density of Population

Table 8 shows the density of population in the different provinces and territories of Canada in the census years 1951, 1956, 1961 and 1966. Omitting the Yukon and Northwest Territories where population density is exceedingly low, there were 9.50 persons per square mile in Canada as a whole in 1966 compared with 8.66 in 1961 and 6.65 in 1951. The greatest increase in the latest five years was shown by Ontario where there were 2.11 more persons per square mile, followed by Prince Edward Island where there was an increase of 1.79. However, it should be remembered that the population within the provinces is very unevenly distributed; all provinces with the exception of the Maritimes have large areas almost devoid of population and concentration in other areas is very high. The density of each county and census division, of each city, town and village of 2,500+, and of component parts of metropolitan and other major urban areas in 1966 is given in DBS Census Report 1.1 (Catalogue No. 92-601). Table 9 gives density in the city proper and in the fringe area of each of the five largest metropolitan areas in 1966 compared with 1961 and 1956.

Subsection 5.—Sex and Age Distribution

The sex and age distributions of a population are basic to most, if not all, other analyses, as they influence employment, marriage, birth and death rates and a multitude of other factors that are of great importance in the national life.

Sex.—The Canadian population has always been characterized by an excess of males, although this excess has been greatly modified in recent years. Since Confederation, the peak sex ratio for Canada as a whole was 113 reached in 1911, a census year that fell within

a period of heavy immigration; the 1966 ratio was 101. In the older settled provinces east of Manitoba the ratio varied between 104 in 1911 and 100 in 1966, but in the western provinces which were being opened to settlement in the early years of the century the ratio changed from a high of 146 in 1911 to 103 in 1936.

The sex distributions and variations in ratio among the provinces are given for the census years 1951, 1956, 1961 and 1966 in Table 10.

Age.—The age composition of the Canadian population is, of course, a reflection of past trends in vital rates and immigration. The lower birth rate of the 1961-66 period relative to that of the late 1950s had a considerable impact on the population under 15 years of age in 1966. This age group increased by only 400,000 or 6.5 p.c. between 1961 and 1966 as compared with a gain of 967,000 or 18.5 p.c. in the 1956-61 period. As a result, the proportion that this age group formed of the total population fell from 34.0 p.c. in 1961 to 32.9 p.c. in 1966. The population of working age—those 15-64—increased more substantially, with a gain in excess of 1,200,000 or 11.5 p.c. in the 1961-66 period. Consequently, this age group constituted 59.4 p.c. of the total population in 1966 as compared with 58.4 p.c. five years earlier. Close to one third of the over-all 1961-66 increase in the 15-64 age group occurred among those 15-19 years of age. This young adult age group in 1966 was, of course, comprised of those born in the high birth rate, postwar years. The proportion of persons 65 years of age or over was approximately the same in 1966 as in 1961.

Table 11 shows the population of Canada classified by five-year age groups and by sex for the census years 1951, 1956, 1961 and 1966. The provincial distribution by specified age group is given for 1966 in Table 12.

Subsection 6.—Marital Status

After sex and age, marital status analysis is probably next in importance from a vital, economic and social viewpoint. The number of married females between 15 and 45 years of age is a most significant factor in the fertility of a population. If the proportion of females in this group is low, the expected birth rate will be low. In 1966, 61.2 p.c. of all married females were in the 15-44 age group compared with 62.9 p.c. in 1961, 64.0 p.c. in 1951, 61.2 p.c. in 1941 and 63.5 p.c. in 1931.

In the 1961-66 period, the total population 15 years of age or over increased by 11.4 p.c. while the single adult population rose by 18.0 p.c., the married by 8.7 p.c. and the widowed and divorced combined by 12.5 p.c. Thus, the proportion of the adult population who were single increased from 26.5 p.c. in 1961 to 28.0 p.c. in 1966 and the married proportion fell from 66.6 p.c. to 65.0 p.c. in the five-year interval. It is of interest that the 1961-66 decline in the proportion married is attributable largely to smaller proportions in this category in the younger adult age groups. The proportion of those 25 years of age or over who were married was approximately the same at the two census years, i.e., 79 p.c., but the married proportion for the 15-24 age group fell from 23.0 p.c. in 1961 to 21.4 p.c. in 1966.

The marital status of the population in 1966 is shown in Table 13.

Subsection 7.—Ethnic Groups and Birthplaces

Ethnic Groups.—A population made up of diverse ethnic groups gives rise to political, social and economic problems quite different in nature from those of one with a more homogeneous ethnic composition. These problems are mitigated, however, to the extent that certain groups are more easily integrated than others. It is equally true that the different backgrounds of various ethnic groups lend variety and diversity to the national life.

The two basic groups in the Canadian population are the French and British Isles ethnic groups. The influence of the French in Canada covers a longer period and, with the exception of the 1921 Census, this group has always exceeded in number any of the components of the British Isles ethnic group.

In 1961, each person was asked the question: "To what ethnic or cultural group did you or your ancestor (on the male side) belong on coming to this Continent?". The language spoken at the time by the person, or his paternal ancestor, was used as an aid in determining the person's ethnic group. The classification is given for 1961 in Table 14 with comparative figures for 1951 and 1941. Information on ethnic group was not collected in the 1956 or 1966 Censuses.

¹ Includes persons born in Canada whose province of birth was not stated.

Subsection 8.—Religious Denominations

In the 1961 Census, enumerators were instructed to record the specific religious body, denomination, sect or community reported in answer to the question: "What is your religion?". Thus, it should be noted that census figures do not measure church membership or indicate the degree of affiliation with any religious body. As shown in Table 17, close to eight out of ten persons in Canada stated that they belonged to one of the three numerically largest denominations—Roman Catholic, United Church and Anglican—in 1961. The table gives comparative figures for the census years 1941 and 1951; this information was not collected in the 1956 or 1966 Censuses.

17.—Principal Religious Denominations of the Population, Census Years 1941, 1951 and 1961

¹ Includes "Hutterites".

² Includes "Other Greek Catholic".

³ Exclusive of Newfoundland.

Subsection 9.—Languages and Mother Tongues

The term "official language" used by the 1961 Census refers only to the English and French languages.* "Mother tongue" is the language a person first learned in childhood and still understands. It should be noted that persons indicated as speaking "English only" or "French only" with respect to official language may also speak other languages and have a mother tongue other than English or French. The use of the English and French languages in Canada at the time of the 1961 Census is discussed in a special article appearing in the 1965 Year Book at pp. 180-184. Table 18 gives the numerical and percentage distribution of official language by province in 1961; this information was not collected in the 1966 Census.

* The British North America Act, 1867 (Sect. 133) makes provision for the use of the English and French languages as follows:—

Either the English or the French Language may be used by any Person in the Debates of the Houses of the Parliament of Canada and of the Houses of the Legislature of Quebec; and both those Languages shall be used in the respective Records and Journals of those Houses; and either of those Languages may be used by any Person or in any Pleading or Process in or issuing from any Court of Canada established under this Act, and in or from all or any of the Courts of Quebec.

The Acts of the Parliament of Canada and of the Legislature of Quebec shall be printed and published in both those Languages.

The use of the English and French languages in the administration of the Government of Canada as set out in the Official Languages Act, 1969, is described briefly at p. 67.

18.—Numerical and Percentage Distribution of the Population Speaking One, Both or Neither of the "Official Languages", by Province, Census 1961

Subsection 10.—Households and Families

This Subsection contains limited statistics on households and families recorded at the 1966 Census; more detailed information may be found in 1966 Census reports relating to households and families (see also p. 207).

A household, as defined in the census, consists of a person or a group of persons occupying one dwelling.* It usually consists of a family with or without lodgers, employees, etc. However, it may consist of a group of unrelated persons, of two or more families sharing a dwelling, or of one person living alone. Every person is a member of some household and the number of households equals the number of occupied dwellings.

The total number and the average size of households are given by province for the census years 1956, 1961 and 1966 in Table 20.

* A dwelling is defined as a structurally separate set of living quarters, with a private entrance either from outside the building or from a common hall, lobby, vestibule or stairway inside. The entrance must not be through another person's living quarters.

20.—Households and Persons per Household, by Province, Census Years 1956, 1961 and 1966

Province or Territory	Households			Average Persons per Household		
	1956	1961	1966	1956	1961	1966
	No.	No.	No.	No.	No.	No.
Newfoundland.....	78,808	87,940	96,632	5.1	5.0	5.0

Nova Scotia.....	162,854	175,341	185,245	4.1	4.0	4.0
New Brunswick.....	120,475	132,715	141,761	4.5	4.4	4.2
Quebec.....	1,001,264	1,191,469	1,389,115	4.4	4.2	4.0
Ontario.....	1,392,491	1,640,881	1,876,545	3.8	3.7	3.6
Manitoba.....	217,964	239,754	259,280	3.7	3.7	3.6
Saskatchewan.....	233,664	245,424	260,822	3.6	3.6	3.6
Alberta.....	294,047	349,816	393,707	3.7	3.7	3.6
British Columbia.....	392,403	459,534	543,075	3.4	3.4	3.3
Yukon and Northwest Territories.....	6,994	7,920	8,931	3.8	4.2	4.3
Canada.....	3,923,646	4,554,736	5,180,473	3.9	3.9	3.7

The average size of the Canadian family* remained the same at 3.9 persons between 1961 and 1966. By province, however, there were some changes, with the average rising in provinces from Ontario west to Alberta and dropping in Newfoundland.

21.—Families and Persons per Family, by Province, Census Years 1956, 1961 and 1966

Province or Territory	Families			Average Persons per Family		
	1956	1961	1966	1956	1961	1966

Canada.....	3,711,500	4,147,444	4,526,266	3.8	3.9	3.9

Closely related to the number of families per household, and also an indicator of living conditions, is the type of family. In 1966, 96.0 out of every 100 families in Canada were maintaining their own households as compared with 94.3 in 1961 and 92.3 in 1956, an apparent steady improvement in living conditions. The families not maintaining their own households fell into two main sub-categories—families related to the head of the household and non-related lodging families. The few who did not fit either of these sub-categories were mostly families of employees living in their employer's household.

There were 8,656,245 children in families in 1966. These are limited by definition to children never married and under 25 years of age who were living with their parents or guardians at the time of the census. In Table 22, the number of children is classified to show the number in each of four separate age groups corresponding roughly to pre-school-age children, those of elementary school age, those at the secondary school level, and those of college or working age.

* A family, as defined in the census, consists of a husband and wife (with or without children who have never married) or a parent with one or more children never married, living together in the same dwelling. Adopted children and stepchildren are counted as own children and, in fact, a family may comprise a man or woman living with a guardianship child or ward under 21 years of age.

Section 2.—Current Population Estimates

Intercensal estimates of the population of Canada and of the provinces have many uses. They are necessary to the calculation of costs of certain economic and social legislation. Business, educational and welfare organizations utilize population estimates in planning future development. They constitute a base for vital statistics rates, per capita figures of production and trade, and other analyses. They also have been found useful for estimating labour force and other population characteristics of data collected in sample surveys.

Estimates are constructed for the total population of Canada and for each province and become available about the date to which they apply—June 1 of each year. Population estimates by province are also available on a quarter-year basis. The estimates of population begin with the preceding census counts, to which are added the births of the intervening census year or years and from which the deaths are subtracted; immigrants are added and emigrants subtracted. No complete information is available on emigration. The DBS receives yearly from the United States the number of persons who gave Canada as country of last permanent residence before entering the United States as immigrants (see Chapter IV on Immigration and Citizenship, Part I, Section 3) and from the Registrar-General of Britain the number of emigrants from Canada arriving by sea and air to take up permanent residence in that country. Such data, however, are not available from other countries but, as indicated by partial data from United Nations sources, the proportion of total emigrants to all other countries is small. Family allowances statistics showing the number of migrant families by province are used in estimating interprovincial shifts in population (see Table 3, p. 213).

The following statement shows the data used in preparing the population estimates for the years 1957 to 1969. The next succeeding census serves as a basis for revision of the annual estimates of each intercensal period.

Year	Population at June 1	From June 1 to May 31 of Next Year			
		Births ¹	Deaths ¹	Immigrants	Residual ²
	No.	No.	No.	No.	No.

² Mainly emigration.

23.—Annual Estimates of Population, by Province, as at June 1, 1956-69

NOTE.—At every census the previous post-censal estimates, made at June 1 each year, are adjusted to the newly recorded population figures. Figures for 1956, 1961 and 1966 are census figures. Figures for 1867-1904 will be found in the 1936 Year Book, p. 141; for 1905-30 in the 1946 edition, p. 127; for 1931-40 in the 1952-53 edition, p. 143; and for 1941-55 in the 1961 edition, p. 165. Figures for 1867-1951 will also be found in *Census of Canada 1961*, Vol. X.

Because of the growing interest in the expanding population of the larger metropolitan areas of Canada, a series of intercensal estimates was begun in 1957. Table 24 shows the estimates for 1968 and 1969 compared with the census counts of June 1, 1961 and 1966. As in preparation of intercensal population estimates for provinces, the births occurring in the metropolitan areas between June 1, 1966 and June 1, 1969 were added to the population at the census date and deaths subtracted. Immigrants over this period reporting these metropolitan areas as places of destination were added and allowances made for losses in population by emigration. Also, the net in-movement or out-movement caused by internal migration was calculated from family allowances and other data.

24.—Estimated Population of Metropolitan Areas¹ as at June 1, 1968 and 1969, compared with 1961 and 1966 Censuses

¹ Areas as of the 1966 Census.

Table 25 gives estimates of the population of Canada and the provinces by age group and sex as of June 1, 1969. The method followed in preparing these estimates was much the same as that used in calculating the population estimates, described on p. 242. These estimates are subject to revision when data from the next census are available.

Section 3.—The Native Peoples of Canada*

The Indians

The 237,490 persons registered as Indians by the Department of Indian Affairs and Northern Development are persons who are entitled to be so registered in accordance with the provisions of the Indian Act. They are grouped for the most part into 556 bands and occupy or have access to 2,263 reserves and settlements having a combined area of 5,983,072 acres.

26.—Indian Land in Reserves and Settlements and Number of Bands, by Province, as at Mar. 31, 1969

Administration.—Pursuant to the British North America Act, the administration of Indian affairs, which had been under the management of several provinces, came under the jurisdiction of the Government of Canada in 1867. From January 1950 to December 1965, Indian affairs were the responsibility of a Branch of the Department of Citizenship and Immigration. By legislation (SC 1966, c. 25) a new department was formed whereby the Indian Affairs Branch joined with part of the Department of Northern Affairs and National Resources to become the Department of Indian Affairs and Northern Development. This Department is composed of a headquarters staff at Ottawa, seven regional offices, and a varying number of district offices and field agencies. Attached to the head-

* Revised by the Department of Indian Affairs and Northern Development, Ottawa.

quarters and regional and district offices are specialists in such matters as education, economic and resource development, community affairs, social assistance, and engineering and construction.

Education.—The key to continued progress in Indian education is the active participation of the Indians themselves through their school committees and membership on school boards, strengthened by ever-increasing support from non-federal governments and from professional groups concerned specifically with classroom instruction of Indian pupils. The Education Branch of the Department of Indian Affairs and Northern Development maintains and operates a number of schools for Indians but in 1968-69, 33,351 of the 62,834 Indian elementary and secondary school pupils attended non-federal schools, a system arranged for the most part through agreements between the Branch and individual school boards. In Manitoba, British Columbia and New Brunswick, however, under agreement with the respective provincial governments, a uniform tuition fee is paid by the Branch for Indian pupils attending schools under the jurisdiction of the province. Federal financial assistance for pupils attending non-federal schools varies from payment of tuition fees to full maintenance. Promising senior students are awarded scholarships to attend university or vocational school and scholarships are given to those who show promise in the arts.

Federal schools for Indian children are in operation in all provinces except Newfoundland and school residences care for children who, because of isolation or for other reasons, are unable to attend local schools. Standard classroom supplies and authorized textbooks are used in federal schools, which follow generally the curriculum of the province in which they are located.

A two-year kindergarten program has been instituted to give a head start to children who will receive their classroom instruction in a language other than their mother tongue. It has developed very rapidly and it is anticipated that all five-year-olds will be enrolled in school by 1971 and all four-year-olds by 1973. The 1968-69 kindergarten enrolment was about 6,000.

Indians in the Northwest Territories attend regular elementary and secondary schools, along with Eskimo, metis and white young people. The curriculum followed is based on that of Alberta schools but modified in recognition of the different training they will require for life in their northern environment.

Community Development and Improvement.—The community development program, in operation since 1965, has led to much closer involvement of the Indian people in the management of their own affairs. In their efforts to accept such responsibility, many Indian bands across the country are developing their own municipal-type administration. In 1969-70, this program was assisted by six regional superintendents of community affairs and 46 community development workers (18 of Indian status), together with four workers on contract with the Department and 36 hired by provincial governments. A grants-to-bands program makes it possible for participating bands to operate and administer their own programs through financial and advisory assistance. Expenditure under this program increased from \$71,065 in 1965 to \$2,023,059 in 1969-70, and in the latter year community affairs turned over a sum of \$9,966,808 in program funds to Indian bands for administration.

Federal-provincial community development agreements extending provincial services to the Indian people exist with Ontario, Alberta, Manitoba and Saskatchewan. Costs are shared on a population basis where both Indians and non-Indians are involved. An additional step forward was taken on Oct. 1, 1969, when the Federal Government, the Manitoba Government and the Manitoba Indian Brotherhood agreed that the Brotherhood should take over the responsibility for community development in that province. Community development services for seven reserves in the Cape Breton area of Nova Scotia are provided under an agreement with the extension department of St. Francis Xavier University at Antigonish.

Over the past few years, encouragement has been given to the Indian people in the development and perpetuation of their own culture. Grants, subsidies and scholarships have been given to individuals, groups and organizations for the development of their creative and performing talents—Indian fine arts and crafts, literature, dancing, folk songs and related activities. Such grants amounted to over \$300,000 since the inception of the program in 1965.

In 1969-70, training courses were carried on continually in all seven regions across the country in such fields as leadership, human resource development, band government, home-making and folk activities and in many related areas. These courses involved 2,000 Indian people and 500 departmental staff, for an estimated 13,000 man-days. The human resources development program alone had an attendance of 43 Indians and non-departmental staff and 27 departmental staff, for a total of 1,091 man-days.

The Technical Services Branch of the Department assists with the physical development of Indian communities—community planning on reserves, housing accommodation, water and sanitation, electrification, construction and maintenance of roads and bridges, etc. Such service is given either directly through the efforts of the community concerned, indirectly through consultant planners, or through provincial or regional planning offices.

The Stony Indian Reserve, 50 miles west of Calgary in Alberta, now has a court house of its own, designed to symbolize the nomadic past of the 1,600-member Stony Tribe. In this stylized "teepee", an accused Indian stands before a magistrate from nearby Banff but also before his own people for judgment.

There were 1,794 houses constructed on Indian reserves in the year ended Mar. 31, 1969. Financing and operation of three housing programs on reserves and one off-reserve program, under way in 1970, may be described as follows:—

1. Subsidy housing program..... Direct subsidy by the Federal Government.
2. Band-administered housing program.... Band councils may, by resolution, request authority to administer federal appropriation, either as the sole source of financing or in conjunction with band funds and housing loans from the Central Mortgage and Housing Corporation.
3. Indian on-reserve housing program..... Individual housing loans from the Central Mortgage and Housing Corporation as a sole source of financing or in conjunction with federal subsidy.
4. Off-reserve housing program..... Indians living away from reserves may secure mortgage funds from the Central Mortgage and Housing Corporation or approved lenders in conjunction with forgivable ten-year second mortgage funds from the Federal Government.

In recent years, emphasis has been placed on overcoming the isolation of many reserves by the building of roads to facilitate movement between Indian and non-Indian communities, the upgrading of roads on reserves adjacent to urban communities, the par-

ticipation of Indian children in off-reserve school programs, the commuting of Indian people to and from centres of employment, and the development of marketing of reserve resources. Where economically feasible, electric power is being installed at Indian reserves, and a potable water supply and adequate sanitation facilities are requirements at all reserves.

In the 1968 tourist season, 114 Indians owned and operated tourist-outfitting establishments, providing employment on a seasonal basis for 520 people. In addition, in the field of tourism and recreation, Indians owned and operated 31 tent and trailer parks, 36 picnic grounds, 36 businesses providing overnight accommodation, eight marinas, six museums and villages, two sightseeing tour businesses and six other operations that combined such facilities. There are approximately 6,700 Indians engaged in producing Indian arts and crafts, 70 of whom operate their own retail outlets. Gross sales for 1968-69 were estimated at \$1,500,000. Participation is encouraged by the Department through the provision of raw materials and the operation of a central marketing service and, recently, Indian business leaders in the arts and crafts industry formed an advisory group to work with the Department in devising improved production and marketing facilities. Indian people are business planning and operation are available to prospective Indian businessmen in conjunction with the operations of the Fund.

The Indian Loan Fund continues to provide financing for Indian enterprises. In 1968-69, 139 loans totalling over \$1,000,000 were made to farmers, fishermen, lumbermen, craftsmen, bus operators, merchants, tourist-facility operators and others. Advisory services in business planning and operation are available to prospective Indian businessmen in conjunction with the operations of the Fund.

An industrial, commercial and real estate development program was started in January 1969 to encourage the development of secondary industry on or in proximity to Indian reserves. During the year two textile plants were established on reserves and negotiations were under way with a number of manufacturers for the establishment of branch plants on reserves.

Resource and Industrial Development.—The Department, through its Indian-Eskimo Economic Development Branch, assists individuals and bands in their efforts to create business and employment opportunities in service and secondary industries and in the areas of resource utilization and land development, including mineral resources on Indian reserves. Assistance is in the form of loans, grants, technical and management advice and specialized training. Many programs are conducted in co-operation with other federal departments, provincial governments and private organizations.

Statutory responsibilities covering reserve and surrendered lands and the administration of Indian estates are administered by the Branch. At the end of March 1969, some 11,097 leases of or permits to use Indian reserve lands by non-Indians, excluding oil and gas resource leases, were in effect, providing over \$5,000,000 annually in income to individuals and bands. Oil and gas resources, which are developed through leasing to non-Indians, continue to provide major revenues for Indian bands in Alberta, and bands in other western provinces and in Ontario also receive revenues from these resources. In 1968-69, revenues from royalties, bonuses and rentals totalled \$4,278,795; 2,000,000 acres of Indian oil and gas rights were under contract, 598 under lease and 65 under permit.

The mining resources of the Indian reserves, for many years left under-developed, are receiving increased attention, largely because of a change in policy for disposing of mineral rights and of an increasing interest of band councils in the development of minerals. Since late 1968, Indian band councils may negotiate mining leases and permits direct with the mining companies as an alternative to disposal by public tender.

During 1968-69, some 1,300 Indians were engaged in farming, either full-time or part-time, on 200,000 acres of reserve lands, and another 1,012 operated ranches extending over

530,000 acres. Under the Rotating Herd Program, 9,346 head of cattle in 335 herds were out on loan. The total value of agricultural production on reserve lands exceeded \$4,800,000.

Many Indians still depend on fishing and trapping for all or part of their earned income. In 1968-69, 2,300 fishermen produced about 20,000,000 lb. of fish having a gross value of \$8,400,000, and over 11,000 trappers brought in furs with an approximate value of \$4,000,000, accounting for 30 p.c. of the total wild fur production in Canada. Timber produced from reserve lands amounted to 323,862 cunits (a unit of stacked wood containing 100 cu. feet of solid volume within its outside dimensions) with a value of over \$6,000,000, which represented 69 p.c. of the volume of timber cut from all federal lands.

Welfare.—Indians, like other Canadians, are eligible for benefits from a number of welfare programs which are administered by different levels of government, Indian bands and private agencies. Like other Canadians, not all Indians have the same programs available to them, for some programs vary between and within provinces and on and off reserves.

Some Indian bands administer social assistance and child care for persons living on the reserve of the band. The criteria of eligibility and rates of payment for social assistance are generally based on those of the province in which the band is located. Family allow-

Canadian Indians work high above ground on the Nelson River transmission line. More than 70 men from the Fairford and Lake St. Martin Reserves in central Manitoba are working on the project as members of high steel crews.

ances, youth allowances, old age security and the guaranteed income supplement are paid to Indians by the Department of National Health and Welfare on the same basis as they are paid to other Canadians.

Indians are eligible for benefits from some, but not all, provincial welfare programs except in the Northwest Territories. Generally speaking, the provincial programs from which Indians are eligible for benefits are programs for specific categories of persons, such as the blind. Benefits from less specific programs, such as social assistance, are not generally available to Indians living on reserves, although they are in some parts of some provinces.

The federal Department of Indian Affairs and Northern Development provides social assistance, care for children and care for physically handicapped adults for Indians where these are not available from other sources. The criteria of eligibility and the rates used in calculating the amount to which an application for social assistance is entitled are based on those of the provinces in which the person applies for assistance.

Indian Consultation and Negotiation Group.—From March 1968 to May 1969, the Federal Government and Indian representatives from almost every band in Canada discussed the possibility of amending the Indian Act. Eighteen meetings were held across the country at which the Indian people put forward a great many ideas and views. Some were related to possible amendments to the Indian Act and others had as their main theme the over-protective, over-paternalistic functioning of the Indian Affairs Branch. Many reflected a deep discontent with the way in which Indian lands are managed. Nearly all represented a call for change. As the consultations progressed, it became clear that simple amendments to the Indian Act were not enough and the Government therefore undertook a complete review of its programs for Indians, examined its policies and considered the effect of them on the present situation of the Indian people. The review showed that the time had come to change long-standing policies and programs.

On June 25, 1969, the Government's new Indian policy proposals were announced in the House of Commons. The proposals have as their objective the provision of opportunity for Indians to achieve equality in social and economic terms, while retaining their cultural distinctiveness. The aim of the policy is to enable the full, free and non-discriminatory participation of the Indian people in Canadian society. The policy would open new doors, provide choices that are not now available, and make it possible for the Indian people to adapt to the new world but at the same time retain the real values of the past.

The Government believes that to put such a policy into effect and enable individual Indians and Indian bands to achieve full participation in the cultural, social, economic and political life of Canada requires that: (1) those who are farthest behind be helped the most; (2) there be positive recognition by everyone of the unique contribution of Indian culture to Canadian life; (3) services come through the same channels and from the same government agencies for all Canadians; (4) control of Indian lands be transferred to the Indian people; (5) lawful obligations be recognized; and (6) the legislative and constitutional bases of discrimination be removed.

Since the presentation of the proposals, up to the time of writing (May 1970) the main activity was the holding of numerous meetings with various Indian associations and groups and with provincial ministers and officials to explain the policy proposals and discuss their implications. Negotiations had not begun. It is the aim of the Department to stimulate constructive discussions and to consider the counter-proposals that the Indian people may put forward so that the policies developed will reflect the realities of contemporary Canadian social and economic conditions and the aspirations of the Indian people.

The Eskimos

Canada's Eskimo population is growing rapidly. About 16,000 now live in scattered camps and settlements of 25 to 500 people, mainly in the Northwest Territories but also in Arctic Quebec (3,200), Labrador (1,250) and northern Manitoba (365). The factors of

severe climate and isolation have in the past complicated the initial problems of ensuring that all Eskimo people had food, access to health care and warm shelter but good progress has now been made in providing for these basic needs. Medical care is the responsibility of the Department of National Health and Welfare. Administrative responsibility for education, welfare and municipal services for all residents of the Northwest Territories has recently been transferred to the Territorial Government in Yellowknife which will gradually assume other government functions. However, the federal Department of Indian Affairs and Northern Development will continue to manage the natural resources of both the Northwest Territories and Yukon Territory.

Although some Eskimo families still live in hunting camps and take their living from the land, the trend is strongly toward community living centred around the local school, nursing station, trading store and co-operative building. Most Eskimos now live in permanent housing and their acceptance of new ways that are of advantage to them is symbolized by the fact that in most communities the dog-team, traditionally used for transportation, is being replaced by the snowmobile.

With changing conditions, education is a vital factor in the lives of the Eskimo people, both young and old. Although only 15 p.c. of the Eskimo children of school age were enrolled in school in 1953, the system has expanded to such an extent that in 1969-70 about 4,118 Eskimo children were registered in 64 schools in the Northwest Territories and Arctic Quebec, this number representing nearly 95 p.c. of the Eskimo school-age population. For the most part, children attend school in their home communities up to grade six and then go to larger communities for senior grades and for vocational education. When Eskimo children must leave home to continue their education, the Department provides transportation, room and board in pupil residences, clothing and a small weekly allowance. Senior secondary education is available at six high schools in the Northwest Territories, vocational courses at Yellowknife, N.W.T., and pre-vocational courses at Churchill, Man. In many cases, a special curriculum allows older boys and girls with limited academic training to spend half days on academic upgrading and the other half in occupational classes.

Eskimo students who attain senior matriculation may attend university through a system of loans and grants established by the Government of the Northwest Territories for all Territorial residents. Grants cover transportation, tuition and textbooks, and loans may be obtained for costs of maintenance. Although there were only three Canadian Eskimos attending university in 1969-70, others advancing into senior high school grades will be university material in the years immediately ahead.

In the vocational field, those who have adequate academic education may enter technical institutes, teachers' colleges, schools of nursing, business colleges or trade schools in the provinces or they may take on-the-job training. There is a large demand for Eskimos with education and training backgrounds of a high level and it is difficult to find enough of them to fill all requests. During 1969-70, 115 Eskimos were enrolled in training courses outside the Northwest Territories in such varied courses as commercial pilot, nursing aide, fish processing, clerk-typist, barbering, boat building, handicraft management, heavy-duty equipment operating, classroom assistant, and art.

Apprenticeship offers another opportunity for training. Apprentice tradesmen with little education take academic upgrading at night and on-the-job training during the day and at intervals are examined on knowledge of their trade in Eskimo. Throughout the North, there are Eskimo men working at various levels of apprentice training, as heavy equipment operators, plumbers, carpenters and mechanics. They hold positions as interpreters and clerks in retail and co-operative stores and in government offices; one young man is the Area Administrator at Spence Bay. The objective of the Department, in co-operation with other federal departments in the North, is to have 75 p.c. of staff positions in the Territories filled by local residents by 1977.

In vocational classes, Eskimo girls train as clerical assistants, stenographers, hairdressers, nursing aides and commercial cooks. Both boys and girls who are interested in teaching begin their careers in settlement schools as classroom assistants, dividing the day between academic studies and work with young Eskimo pupils. Special care is given to the development of curriculum for northern schools and guides are prepared for such subjects as trapping, fur preparation and the care and use of firearms and outboard motors. By 1972 the Government expects to have sufficient classrooms and pupil residence accommodation to provide for every school-age Eskimo child in the Northwest Territories and Arctic Quebec. This will require the construction of more than 200 classrooms and the provision of 1,000 beds in pupil residences.

The adult education program is designed to inform those of the older generation who feel themselves cut off from children in school. Much emphasis in this area deals with the terms and maintenance of the new housing program. Although permanent houses were introduced in 1959-60, Eskimo families could afford to pay very little toward housing costs. Even families who could purchase these small one-room houses often could not afford the high cost of fuel, light and water. It became apparent that a public housing program was needed to assist the Eskimo people and, in October 1965, government approval was obtained for a five-year program to supply three-bedroom rental houses, allocated on the basis of family need. Rent is scaled according to income, ranging from welfare recipients' payments of \$2 a month up to the maximum monthly rental of \$67. Services include heating, electricity, water delivery, sewage disposal, and basic furniture. Construction of three-bedroom houses began in 1966 on Baffin Island and in Arctic Quebec, and in the summer of 1968, 140 houses were shipped to the Eastern Arctic, 20 to Arctic Quebec and 100 to the Western Arctic. The rental housing program has now been completed for 15 communities. Credits are given to tenants in new houses for extra rental payments and for improvements or additions to the houses, and 33 p.c. of the rent previously paid is credited toward the purchase price if tenants decide to buy. To help solve the problem of fuel oil for heat and electricity, bulk storage tanks have been installed in many locations and more are being added each year.

In Eskimo communities, the Eskimo people are encouraged to assume management of their own affairs through local or regional councils; practical assistance, advice and financial support are given by the Northwest Territories Government and the federal Department of Indian Affairs and Northern Development. In over 40 communities a development fund acts as a catalyst in social and economic development. The full range of social services applicable to all Canadians is available to the Eskimo people—family allowances, old age and disability pensions and blind persons' allowances. A child welfare program cares for children who are neglected or whose parents are temporarily unable to care for them. Social assistance provides for persons whose income from employment is insufficient to meet their needs and those of their dependants. Medical and public health services are provided for Eskimos not included under provincial arrangements and who are unable to provide for themselves. Eskimos in hospitals in the south are kept in touch with distant family members through tape-recorded messages and medical progress reports. When medical treatment is completed, the Department of Indian Affairs and Northern Development is responsible for the return of Eskimo patients to their homes. Rehabilitation may include adjustment training in sheltered employment and the adaptation of artificial limbs and equipment.

The base of the economy in Eskimo communities is gradually broadening. A number of successful Eskimo co-operatives have been established, engaging in the production of arctic char and arctic trout, fur garment manufacturing, logging, lumbering and house construction, and continuing economic surveys are made to pinpoint local resources that have possibilities of development. Eskimo sculptures, prints and

fine crafts have gained worldwide recognition and bring \$1,500,000 annually to Eskimo artists. Art is a major part of the rich heritage of these people and is supported by cultural exchanges of films, radio programs and exhibitions. Literature in the Eskimo language is being collected and a regular publication *Inuttituit* is printed in syllabic script and distributed to Eskimo families in the North. The first volume of a pocketbook series printed in syllabics and entitled *The Autobiography of John Ajaruaq*, was published in the fall of 1968.

Although many communities are enjoying greater cash income through the use of local resources and the capacities of their people, the need for the establishment of new industries to provide employment continues to grow. The young people especially, as they leave school, must have opportunities for employment to relieve them of following the traditional harsh and marginal existence on the land. This might be done by giving financial incentives to secondary industry willing to establish in the North. If employment can be provided in this way as well as through primary industry based on mineral resources, the Eskimo population, with its innate ability to live comfortably in the Arctic, can be a tremendous asset to Canada.

crafts in an Eskimo co-
operative store at Fort
Smith, a community on the
south coast of Quebec.

Section 4.—Statistics of World Population

World population figures given in Table 31 are from the *United Nations Population and Vital Statistics Report* for January 1970 and, except as otherwise noted, are mid-year estimates for 1968. Area figures are from the *United Nations Statistical Yearbook 1968*.

Estimated Population of the World by Continents.—The following statement presents estimates of the 1968 mid-year population of the world by continental divisions. These aggregates do not coincide exactly with the sum of the figures for individual countries

because they include, in addition, adjustments for over- and under-enumeration, over- and under-estimation, and data for categories of population not regularly included in the official figures.

<i>Continental Division</i>	<i>Population</i>

PART I.—IMMIGRATION AND EMIGRATION*

Section I.—Immigration Policy and Administration

Policy.—Traditionally, Canada has sought to increase its population through immigration in order to expand the domestic market, reduce per capita costs of administration, stimulate economic activity by providing new skills, ideas and enthusiasm, and support a higher level of cultural independence and creativity. Canadian experience indicates that a substantial volume of immigration is highly desirable but new population cannot be added haphazardly without regard to their means of subsistence or their effect on Canadian life. Technological change and the development of Canadian society to its present complex state require that, to be able to establish themselves successfully, new settlers must be economically competitive in terms of education, training, skills and personal qualities. Over the years, Canada has endeavoured to acquire immigrants who were adaptable to Canadian life. Such persons, finding familiar institutions in Canada, feel more at home and this assists in their establishment in the new life they find here. Canada makes every effort to sustain the movement of immigrants from countries having like economic, social and political backgrounds but people anywhere in the world may immigrate to Canada if they demonstrate their suitability for life in this country and are likely to become established without hardship to themselves or disruption to the communities in which they settle.

It may be mentioned also that Canada, in addition to welcoming immigrants, has on many occasions during the past quarter-century sanctioned the entry of groups of refugees. This is a humanitarian movement and is tangible evidence of Canada's recognition of its responsibilities in the international community. A conservative estimate of the number of refugees admitted since 1945 is 350,000, which includes over 8,000 Czechoslovakians who left their own country following its invasion by the Soviet Union in August 1963.

On Oct. 1, 1967, Canada adopted new Immigration Regulations which are applied universally; these evolved from a White Paper on Immigration, tabled in the House of

* Sections 1 and 2 of this Part were prepared in co-operation with the Information Service, Department of Manpower and Immigration, Ottawa. The history of immigration and the Immigration Act and Regulations up to the mid-1950s is dealt with in detail in a special article entitled "Developments in Canadian Immigration" appearing in the 1957-58 Year Book at pp. 154-176.

Commons on Oct. 14, 1966. After study by a Joint Committee of the Senate and the House of Commons and their consideration of representations by Members of Parliament, representatives of provincial governments, private organizations and individuals, the Regulations were authorized by Order in Council (PC 1967/1616). These Regulations present in detail the principles involved in selection of immigrants, and indicate the factors that immigration officers must take into account in assessing potential immigrants.

The assessment system for potential immigrants is based on the following factors: (1) *Education and Training*—up to 20 assessment units to be awarded on the basis of one unit for each successful year of formal education or occupational training; (2) *Personal Assessment*—up to 15 units on the basis of the immigration officer's assessment of the applicant's adaptability, motivation, initiative and other similar qualities; (3) *Occupational Demand*—up to 15 units if demand for the applicant's occupation is strong within Canada and whether the occupation is skilled or unskilled; (4) *Occupational Skill*—up to 10 units for the professional, ranging down to one unit for the unskilled; (5) *Age*—10 units for applicants under age 35 with one unit deducted for each year over age 35; (6) *Arranged Employment*—10 units if the applicant has a definite job arranged in Canada; (7) *Knowledge of French and English*—up to 10 units, dependent upon the degree of fluency in French and/or English; (8) *Relative*—up to five units if the applicant has a relative in Canada able to help him become established but unprepared or unable to sponsor or nominate him; and (9) *Employment Opportunities in Area of Destination*—up to five units if the applicant intends to go to an area of Canada where there is a generally strong demand for labour.

The Regulations formally confirm that Canadian citizens or permanent residents are entitled to bring their dependants to Canada, making a clear distinction between dependants and relatives entering the working force. Thus, there are three categories of immigrants—"sponsored dependants", "nominated (non-dependent) relatives", and "independent applicants". A "dependant" is defined for immigration purposes as: husband or wife, fiancé or fiancée; unmarried son or daughter under age 21; parent or grandparent over age 60, or younger if widowed or unable to work; an orphaned brother, sister, nephew, niece or grandchild under age 18. Provision is also made for an adopted child and, where the only dependant is a husband or wife, for the nearest living relative. An application for a dependant is dealt with irrespective of whether he is in Canada or abroad and irrespective of the financial circumstances of the sponsor. He will be admitted to Canada provided he is in good health and of good character.

The "nominated (non-dependent) relative" category includes son or daughter over age 21, married son or daughter under age 21, brother or sister, parent or grandparent under age 60, nephew, niece, uncle, aunt or grandchild. The responsibilities of the nominator include willingness and ability to provide accommodation, care and maintenance for the person applied for and to otherwise assist him in becoming established. The nominator is required to sign such an undertaking for a period of five years. Because of the assistance provided by the nominator in Canada, the nominee is assessed on only some of the selection factors—education, personal qualities, occupational demand, age and occupational skill. On the general assumption that a Canadian citizen usually will be better established in Canada than a more recent arrival and hence in a better position to give his relative more assistance, a slightly higher preference is given to a relative nominated by a Canadian citizen than to one nominated by a permanent resident.

To qualify for admission to Canada, an "independent applicant" normally must obtain 50 of the 100 assessment units available, although it is possible to combine factors in such a way that some of them may compensate for relatively low qualifications in others. The major purpose of the standards is to select immigrants who can make a successful adjustment to life in Canada and thereby contribute to the country's progress.

The main factors for successful establishment are education, personal qualities and occupational demand. As far as the education of the individual is concerned, the principle of successful educational achievement in the immigrant's home has been adopted since it has been found impracticable to equate educational standards in many countries to

Canadian standards. In assessment of his personal qualities, the applicant will be considered as to his chances for success in Canada in terms of his economic establishment and his personal satisfaction as well as on the composition and the attitudes of his whole family. The personal assessment process also includes the function of counselling and the applicant is informed about the market in different areas of Canada for his skills and about the difficulties he may encounter in adjusting to the Canadian way of life. The demand in Canada for the applicant's skill or occupation is given due importance. The Department is responsible for immigration but is equally concerned with manpower and is obliged to discourage immigration for the applicant with an occupation for which there is little or no demand in this country. Where there are shortages of labour in certain industries, Canadian employers or provincial officials may interview candidates abroad for such industries and channel them to the Department's visa offices but these candidates also must comply with the selection standards.

The other six selection criteria have individually lesser weight but in total are equal to the three main factors. In considering adaptability in a new environment, occupational skill is important. A person's skill is usually acquired at a price in financial terms. It is an investment and the higher the investment usually the higher the skill and thus the greater the gain to Canada. Age must be taken into account when considering adaptability in a new environment. On average, younger people adjust more easily and for this reason the age group up to 35 years is assigned the maximum number of assessment units, with one unit deducted for each year over 35. However, an older person is not refused on this factor if he has other assets such as highly developed skills that are in demand in Canada. Credit will be given to an applicant who has a firm commitment from a Canadian employer because this will assist his economic establishment during the initial period after arrival. Economic and social adjustment of a new immigrant is greatly facilitated by knowledge of the languages of his adopted country. As a consequence, units of assessment are given to applicants for the degree of their fluency in either English or French or both. An applicant whose mother tongue is other than English or French may be given some credit for even a partial knowledge of either or both of the two languages. In fact, it is possible that such an applicant may obtain more assessment units on the language factor than a unilingual applicant who speaks only English or French. If an applicant has a relative in Canada who is able to help him become established, credit is given for this factor since the presence of a relative is a definite asset in the adjustment process.

No one is compelled to go to any particular area in Canada but, if a prospective immigrant is counselled by an immigration officer to go to an area that offers the best opportunity for him and is prepared to accept that advice, he is awarded the units appropriate for that area. If the over-all demand for labour is higher in any one area in Canada than in others, the total assessment of the immigrant destined to that area reflects that high demand. The assessment of individual areas in Canada as to their over-all demand for labour, and the assessment of national demand for individual occupations is conducted on a continuous basis so that selection officers overseas are in possession of up-to-date information at all times.

The Regulations provide for the admission to Canada for permanent residence of persons who have come as visitors. However, since open acceptance of applications from visitors would be inefficient and would give an undue advantage to some people, a visitor is not given any credit for arranged employment in Canada, so that he must qualify on other factors. Conditions of entry must have been observed and, in particular, the applicant must not have taken employment in Canada if not authorized to do so. Foreign students studying at recognized Canadian institutions are regarded as any other visitors applying for permanent residence in Canada. However, if foreign students are under an obligation to their government to return to their own country, they are not permitted to apply for permanent residence in Canada. Applications for permanent residence from seamen on shore leave are not accepted.

A Canadian citizen sponsor whose application for the admission of a dependant is refused or an immigrant who has been ordered deported has the right to appeal to an inde-

pendent Immigration Appeal Board, the establishment of which was authorized by Act of Parliament in 1967. The Board is a Court of Record, entirely separate from the Department and with the authority to enforce its orders.

Administration.—The Canada Immigration Division of the Department of Manpower and Immigration administers the Immigration Act and Regulations. The creation of the Department of Manpower and Immigration, which came into being officially on Oct. 1, 1966, resulted in a substantial reorganization of the Immigration Division which now has three main Branches. The Programs and Procedures Branch is responsible for the long- and short-range planning of immigration policies and programs, interpretation of the Immigration Act and Regulations and immigration policies, the co-ordination of immigration policies developed internally, functional support in respect of the transportation and initial reception of immigrants in Canada and liaison with transportation companies. The Home Services Branch is responsible for the disposition of difficult individual immigration cases, the provision of procedural guidance to field officers, the formulation of policies and guidelines on the enforcement aspects of immigration operations, and the provision of technical advice on procedures relating to the admission of immigrants and non-immigrants. The Foreign Branch is responsible for the management of the Overseas Service, uniform application of selection standards, promotional activities abroad, implementation of approved programs abroad and the proper counselling and direction of immigrants.

There are 35 visa-issuing offices located abroad—at London, Manchester, Birmingham, Glasgow, Belfast, Dublin, Paris, Bordeaux, Marseille, Brussels, Berne, The Hague, Copenhagen, Cologne, Hamburg, Stuttgart, Vienna, Stockholm, Lisbon, Ponta del Gada, Madrid, Rome, Milan, Athens, Cairo, Tel Aviv, Beirut, New Delhi, Islamabad, Tokyo, Hong Kong, Manila, Sydney, Port of Spain and Kingston (Jamaica). Information offices, visited at intervals by immigration officers based in Stockholm, are maintained in Oslo and Helsinki. Four offices in the United States—at New York, Chicago, San Francisco and Denver—provide information and counselling but do not issue visas. Personnel at all posts are kept in close touch with economic conditions in Canada and thus are able to advise immigrants regarding their prospects for successful establishment in this country. Examination of immigrants and visitors is carried out at 552 ports of entry on Canadian coasts, at points along the International Boundary, and at certain airports and inland offices.

Section 2.—Immigration Statistics

Table 1 shows the number of immigrants arriving in Canada in each year since 1913, the peak year of immigration into the country. Table 2 shows the number and distribution of immigrants in the population of Canada on the latest decennial census date, June 1, 1961, by period of arrival.

1.—Immigrant Arrivals, 1913-69

NOTE.—Figures for 1852-93 are given in the 1942 Year Book, p. 153, and for 1894-1912 in the 1948-49 edition, p. 175.

Table 2 shows that, according to census figures, 1,507,116 persons reported that they had come to Canada between Jan. 1, 1946 and June 1, 1961. These immigrants constituted about 75 p.c. of the total number of immigrants who arrived in Canada during that period. According to the records of the Department of Manpower and Immigration, 2,033,598 persons entered Canada as immigrants during the period 1946-61. The difference between this total and the 1,507,116 postwar immigrants reported in the 1961 Census, amounting to 526,482 persons, represents the losses due to death and emigration among the postwar immigrant arrivals up to June 1961. Since this difference is arrived at by comparing statistics derived from two different sources, it must be taken as only an approximate measure of these losses. It is estimated that deaths of immigrants arriving since 1946 would not exceed 86,000 by June 1961. Hence it would appear that roughly 440,000 emigrated in the period between January 1946 and June 1961, or slightly more than one fifth of the total arrivals over this period.

The 440,000 postwar immigrants who appear to have emigrated from Canada up to June 1961 would thus constitute a little over half the total estimated emigration from Canada since 1946, according to data on emigration used in the preparation of annual population estimates. In this connection it might be mentioned that a substantial element in total Canadian emigration is the movement of Canadian-born persons to the United States, some 387,000 entering the United States as immigrants between July 1946 and July 1961 according to the United States Immigration Service records (see p. 274).

¹ Up to the date of the Census, June 1, 1961.

Recent Immigration.—The extent of immigration to Canada in any period is affected both by domestic conditions and by conditions abroad. However, these influences are seldom immediately decisive. News of good economic conditions in Canada predisposes people in favour of this country but, because the immigration process usually takes several months, actual immigration is not always fully coincidental with the economic situation, so that immigration may at times be slight in good years but appear unduly heavy in less buoyant periods. The time-lag caused by selection, medical examination and documentation is unavoidable. Transportation is often another delaying factor and to these considerations must be added the effect of seasonal unemployment in Canada, which tends to discourage immigration during the months from November to April.

In the early 1960s, the Canadian economy experienced a levelling-off, and even a retrenchment in some areas, from its previous high level of activity and this was reflected in the country's intake of immigrants. However, this interval of economic adjustment lasted only a short time and by 1963 immigration had again risen to more normal levels. In that year 93,151 immigrants came to Canada compared with 74,586 the year before. Promotional efforts abroad were intensified. A resident immigration officer was posted to

Madrid to service immigration applications in Spain and area offices were established to enable teams of immigration officers to make regular visits to adjoining countries in an effort to broaden the base from which immigrants were selected.

In the following year, the number of immigrants admitted to Canada totalled 112,606, a 21-p.c. increase over 1963. By nationality, British immigrants constituted the largest number, followed by Italians and citizens of the United States. This increase was attributable to two principal factors—an intensification of promotional and recruiting activities in the main source countries, and an expansion of examination and selection facilities into areas from which Canada received few immigrants before the establishment of the Immigration Regulations that came into effect early in 1962. The achievements of 1964 were accomplished despite strong competition in Europe for skilled and educated workers and new postwar levels of prosperity. It is, therefore, of considerable significance that, of the 56,190 immigrants who entered the Canadian labour force in that year, 59 p.c. were in the more skilled categories; 13,177 were in the managerial and professional categories, compared with 10,799 in 1963. In 1964, a resident immigration officer was posted to Marseille to expand facilities in France.

In 1965, Canada's demand for skilled immigrant workers once again exceeded the supply. Although skilled workers could be absorbed in large numbers, the need for unskilled workers diminished and for this reason the (then) Immigration Branch continued to emphasize the selection of immigrants possessing professional or other qualifications that would enable them to become established soon after their arrival. Most of the traditional immigrant source countries, particularly in Europe, continued to enjoy buoyant economic conditions. Skilled workers were much in demand and there was strong competition among immigration countries for a share of those skilled workers who were interested in emigration. The number of immigrants admitted to Canada totalled 146,758, a 30-p.c. increase over the preceding year. Immigrant workers who arrived from abroad numbered 74,195, of whom 67 p.c. were in the more skilled categories; those in the managerial and professional categories numbered 18,103. As in the previous year, the major source countries were Britain, Italy and the United States. During 1965, Canadian immigration facilities abroad were substantially improved and expanded. Resident officers were posted to Milan, Italy, and Bordeaux, France, and offices at five other locations were modernized and refurbished.

The rising trend of immigration continued in 1966. In all, 194,743 immigrants came to Canada in that year, an increase of 32 p.c. over 1965. Immigrant workers numbered 99,210, of whom 74 p.c. were in the more skilled categories compared with 67 p.c. in 1965. Those in managerial or professional categories numbered 25,929, which was almost 43 p.c. above 1965 and nearly double the 1964 figure. Of the total of 194,743 immigrants, 63,291 came from Britain, 31,625 from Italy and 17,514 from the United States. There were significant developments in immigration administration and policy during the year. Briefly, as a result of the reorganization of several Federal Government departments, the Immigration Branch of the former Department of Citizenship and Immigration was amalgamated with large segments of the Department of Labour to form the new Department of Manpower and Immigration. The principal advantages to this alignment are that immigration is now more closely identified with national manpower policies, and the extensive services of the Canada Manpower Division in counselling, placing and assisting workers are now fully available to new immigrants (see p. 264). A new policy for dealing with requests from visitors for permanent residence in Canada was introduced with good effect.

In 1967, the second largest number of immigrants arrived in Canada since the end of the Second World War. Of the 222,876 immigrants who came—representing an increase of 14 p.c. over 1966—119,539 were workers of whom 87 p.c. were in the more skilled categories compared with 74 p.c. in 1966. Those in the managerial or professional categories numbered 30,853, a figure 19 p.c. above 1966. Of the total of 222,876 immigrants, 62,420 came from Britain, 30,055 from Italy and 19,038 from the United States.

Developments in Europe, including a more buoyant economy, and conditions in Canada had a significant influence on trends in immigration during 1968 and 1969. A lessening desire on the part of Europeans to migrate to Canada reduced the number of immigrants in 1968 to 183,974 and in 1969 to 161,531. In addition, a strong trend in immigration patterns emerged, highlighted by an increase in the proportion of immigrants from Asia and the West Indies. Although Britain, providing 19.8 p.c. of the immigrant arrivals in 1969, continued to be the major source country, the flow from the United States increased to 14.1 p.c. of the total, and that from Italy accounted for 6.4 p.c. Europe remained the major source area but immigration from Italy showed the largest reduction. There was a substantial decline in the number of applications by Canadian citizens to sponsor relatives from Italy, a factor which previously accounted for a large percentage of the immigration movement from that country.

Analyses of the content of the immigration movement during the years 1967, 1968 and 1969 are given in Tables 3 to 9, and the numbers of persons deported from Canada for various reasons for the same years in Table 10.

Table 3 classifies immigrant admission by country of last permanent residence. During the three-year period shown, 24.1 p.c. of the immigration flow came from Britain and the Republic of Ireland, 40.3 p.c. from Continental Europe, 11.0 p.c. from the United States and 24.6 p.c. from all other countries.

Sex distribution of recent immigrant arrivals is shown in Table 6. In the five years 1965-69, adult males comprised 37.2 p.c. of the immigrants, adult females 36.0 p.c. and children under 18 years of age the remaining 26.7 p.c. Without relation to age, 49.0 p.c. of the newcomers were females.

6.—Sex Distribution of Immigrants as Adult Males, Adult Females and Children, 1965-69

NOTE.—Figures from 1930 are given in the corresponding table of previous Year Books beginning with the 1946 edition.

Item	1965	1966	1967	1968	1969
	No.	No.	No.	No.	No.

Totals, Immigrants.....	146,758	194,743	222,876	183,974	161,531

The number of female immigrants coming into Canada was higher than the number of male immigrants in every year from 1957 to 1964. However, the trend was then reversed and in 1965-68 the number of males exceeded the number of females. In 1969, female immigrants again outnumbered male immigrants. During that year, in the single category, males were predominant up to age 40, whereas in the married category females exceeded males by 3,404, in the widowed category by 3,203 and in the divorced and separated category by 650. Of all persons arriving in 1969 who were 15 years of age or over, 52.2 p.c. were married, 42.3 p.c. were single and 5.4 p.c. were widowed, divorced or separated.

Destinations and Occupations.—Upon arrival in Canada, immigrants are asked to state their intended destinations. According to these records, Ontario absorbed by far the highest proportion of arrivals in the three-year period 1967-69—52.3 p.c. of all the males and 53.2 p.c. of all the females. Quebec was the second province of destination, receiving 19.7 p.c. of the males and 18.8 p.c. of the females, followed by British Columbia with 12.4 p.c. of the males and 12.8 p.c. of the females. The proportions intending to settle in the Prairie Provinces were 13.1 p.c. and 12.8 p.c., respectively, and in the Atlantic Provinces 2.4 p.c. and 2.3 p.c., respectively. The provincial distribution has changed little from year to year throughout the whole postwar period.

In like manner, immigrant arrivals are asked to record the occupations they intend to follow in Canada. Approximately 52.2 p.c. of the persons admitted in 1969 declared that they would enter the labour force. The other 47.8 p.c. were wives, children and

other dependants or were retired persons. Of the male workers, 35.5 p.c. were classed as managerial, professional and technical, 6.7 p.c. were clerical workers, 6.4 p.c. were in service occupations, 36.2 p.c. were in manufacturing, mechanical and construction trades, 3.0 p.c. were general labourers and 4.0 p.c. were farmers. About 18.9 p.c. of the female immigrants entering the labour force intended to follow service occupations. Details are given in Table 9.

Deportations.—Deportations by cause and nationality are shown in Table 10 for the years 1965-69. Persons who have not yet acquired domicile (five years of residence in Canada as landed immigrants) may be deported if they fall into prohibited classes at time of admission or within five years of admission, if they have engaged in commercialized vice, have been convicted under the Criminal Code or have become inmates of prisons, or have gained admission by fraudulent means. The causes that may lead to deportation are narrowed after a person has acquired domicile. A person not a citizen may be deported regardless of length of residence if he is found to be a member of a subversive organization or engages in subversive activities, or if he has been convicted of an offence involving disloyalty to the Queen, or if he has, outside of Canada, engaged in activities detrimental to the security of Canada. A Canadian citizen cannot be deported.

Section 3.—Emigration Statistics

Emigration from Canada is an important factor tending to offset to some extent present and past immigration activities. The major outward movement has always, of course, been to the United States and that movement, both of native-born Canadians and of Europeans who originally migrated to Canada, has attained considerable proportions at certain periods. No Canadian statistics on emigration are available but Table 11 gives figures taken from the annual reports of the Immigration and Naturalization Service of the United States Department of Justice. These figures show the numbers of persons entering the United States from Canada during the years ended June 30, 1960-69 with the expressed intention of establishing permanent residence in that country. They do not include persons travelling for pleasure, even for extended periods of time, holders of border-crossing cards (normally issued to persons living in border areas of Canada but working in the United States) or casual tourist crossings in these same areas.

Of the 18,582 Canadian-born persons entering the United States in the year ended June 30, 1969 with the intention of remaining permanently, 8,600 were males and 9,982 females. Slightly more than one fifth, or 4,071, of the total native-born emigrants were males in the productive age group, 20-59 years. By occupation, the largest group of the total of 18,582 native-born persons was the professional or technical group which numbered 2,431; clerical and kindred workers numbered 1,086, and craftsmen or foremen numbered 965. On the other hand, 11,667 persons, or 62.8 p.c. of the total, were classed as housewives, children and others with no reported occupation. Altogether, 44.8 p.c. of the total were persons under 20 years of age.

Of the 29,303 persons entering the United States from Canada claiming Canada as country of last permanent residence—which of course includes native-born persons and those born in other countries who have resided in Canada—the Immigration and Naturalization Service of the United States Department of Justice lists 4,821 as professional, technical and kindred workers, 2,251 as craftsmen, foremen and kindred workers and 1,746 as clerical and kindred workers. Housewives, children and others with no reported occupation accounted for 15,836 or 54.0 p.c. of the total.

11.—Canadian-Born Persons Entering the United States from Canada and Elsewhere, and All Persons Entering the United States from Canada, Years Ended June 30, 1960-69

NOTE.—Includes only persons who have declared their intention of remaining permanently in the United States when applying for a visa (see text above). SOURCE: Immigration and Naturalization Service, United States Department of Justice.

PART II.—CANADIAN CITIZENSHIP

Section 1.—The Canadian Citizenship Act

The Canadian Citizenship Act, which came into force on Jan. 1, 1947,* replacing previous Naturalization Acts, created the distinct nationality of a "Canadian citizen" to be recognized throughout the world and it provided a means whereby those non-Canadian British subjects and aliens who were permanently residing in Canada or those who might subsequently immigrate to Canada could apply for the grant of Canadian citizenship.

Administration of Canadian citizenship is under the jurisdiction of the Department of the Secretary of State, Citizenship Branch. The Branch conducts a number of social development programs that affect the immigrant as well as the native-born citizen. Although these programs have no economic goals, they can nevertheless make valuable contributions by strengthening the individual, the group or the community. The efforts of the Immigrant Participation Division are directed toward the adjustment of newcomers to Canada. Measures are taken to increase the absorptive capacity of communities so that all newcomers, regardless of racial, religious or national background, may be warmly received. Language instruction is provided for adult immigrants under federal-provincial agreements, half of the cost of which is reimbursed by the Federal Government. The Human Rights Division conducts a program designed to help Canadians gain greater understanding of individual and group rights. It gathers considerable information on such subjects as anti-discrimination programs active in the human rights field in Canada and co-ordinates the work of domestic, voluntary and public agencies with respect to Canada's participation in international programs in human rights. The Indian Participation Division seeks to strengthen native leadership and promotes the development of autonomous native organizations and structures. Substantial grants are made each year to native organizations and friendship centres. Indians are encouraged to participate in both on-reserve and off-reserve activities, and particular attention is given to those who settle in urban areas. The Travel and Exchange Division encourages Canadians, through educational travel, to learn more of their own country and their fellow citizens. Although the main aim of this program is citizenship education, it also has socio-economic implications in that it favours exchanges not only of young people but of Canadians of various income levels and of different ethnic backgrounds in the society. East-west and north-south travel and exchange programs increase the knowledge of opportunities and thus have the added value of being an influence on the potential movement of people and goods.

Over the years the Citizenship Act has undergone several amendments, the latest on July 7, 1967. The provisions of the Act, including the 1967 amendments, are outlined briefly in the following paragraphs.

Natural-Born Canadian Citizens, Born before Jan. 1, 1947.—The Act conferred natural-born status upon two categories of persons in being on Jan. 1, 1947. These were (1) those born in Canada or on a Canadian ship or aircraft and who were not aliens on Jan. 1, 1947; and (2) those born of Canadian fathers outside of Canada who were not aliens on Jan. 1, 1947 and were either minors on that date or had already entered Canada for permanent residence.

The Act provides that a person born abroad who was a minor on Jan. 1, 1947 will automatically cease to be a Canadian citizen on his 24th birthday or on Jan. 1, 1954, whichever is the later date, unless he has his place of domicile in Canada at such date or has, before such date and after reaching the age of 21 years, filed a declaration of retention of Canadian citizenship.

* Naturalization procedures and events leading to the passing of the Canadian Citizenship Act are given in the 1951 Year Book, pp. 153-155.

Natural-Born Canadian Citizens, Born after Dec. 31, 1946.—A person born outside of Canada subsequent to that date, whose responsible parent is considered a Canadian citizen pursuant to the terms of the Canadian Citizenship Act, is a Canadian if his birth is registered with the Registrar of Canadian Citizenship within two years of its occurrence or within such extended period as the Minister may authorize in special cases.

A person who becomes a natural-born Canadian citizen in such a manner will automatically cease to be a Canadian citizen if he fails to file a declaration of retention prior to his 24th birthday or does not have his place of domicile in Canada upon that date.

Newfoundland and Canadian Citizenship.—On Apr. 1, 1949, Newfoundland became the tenth province of Canada and every person born therein or naturalized or every British subject who had domicile in Newfoundland on that date or every woman who married a citizen of Newfoundland and took up residence there before Apr. 1, 1949 became a Canadian citizen. They acquired the right of conferring Canadian citizenship by descent to their children born outside of Newfoundland in the same manner as those who had previously become Canadians. Persons born outside of Newfoundland to Newfoundland parents are natural-born Canadian citizens provided they were either minors on Apr. 1, 1949 or had before that date been lawfully admitted to Canada or Newfoundland for permanent residence. However, a person who was a minor on Apr. 1, 1949, ceased to be a Canadian on his 24th birthday or on July 1, 1968, whichever is the later date, unless he has his place of domicile in Canada at such date or has before such date, and after reaching the age of 21 years, filed a declaration of retention of Canadian citizenship. A person born outside of Canada to Newfoundland parents after Mar. 31, 1949 is a natural-born Canadian if his birth is registered with the Registrar of Canadian Citizenship within two years of its occurrence or within such extended period as the Minister may authorize in special cases. A person who becomes a natural-born Canadian in such a manner will automatically cease to be a Canadian citizen if he fails to file a declaration of retention prior to his 24th birthday or does not have his place of domicile in Canada on that date.

Canadian Citizens other than Natural-Born.—Before the 1953 amendments to the Citizenship Act, the only persons who acquired Canadian citizenship on Jan. 1, 1947 through the transitional clauses of Sect. 9 were persons who were naturalized in Canada before that date, British subjects who had Canadian domicile at the commencement of the Act and women lawfully admitted to Canada and married prior to Jan. 1, 1947 whose husbands would have qualified as Canadian citizens if the Act had come into force before the date of marriage. Sect. 9 was amended on June 1, 1953, so that a British subject who had his place of domicile in Canada for at least 20 years immediately before Jan. 1, 1947 need not comply with the requirements of Canadian domicile provided he was not under an order of deportation on Jan. 1, 1947.

Acquisition of Canadian Citizenship by Aliens or British Subjects.—An adult non-Canadian British subject or an alien who wishes to become a Canadian must formally file an application for citizenship. The non-Canadian British subject may file an application direct with the Registrar of Canadian Citizenship, whereas an alien must file an application through his local court, or through one of the special citizenship courts now established or, if he lives more than 50 miles from a court, he may mail his application to the Registrar of Canadian Citizenship in Ottawa, who will file it with the appropriate court. After the application has been 'posted' for three months, he shall appear before the court for examination. In either case the same requirements are generally applicable:—

- (1) He must have resided in Canada for 12 of the 18 months immediately preceding the date of his application.
- (2) He must have been lawfully admitted to Canada for permanent residence and either have acquired Canadian domicile before July 7, 1967, or have resided in Canada for five of the eight years immediately preceding the filing of his application. Persons living in Canada

Canada's Birthday on July First is celebrated by Governor General Michener and hundreds of children who are his guests at Government House in Ottawa.

A Montreal hostess greets her guest from Windsor in Ontario. It has become commonplace for English-speaking and French-speaking high school students to visit each other's homes during the summer, eager to experience a different environment and to understand a different culture.

before obtaining "landed immigrant" status may count half of each full year before landing toward the residence qualification. The wife of a Canadian needs only to be admitted for permanent residence and reside in Canada for one year.

- (3) He must be of good character and not under an order of deportation.
- (4) He must have an adequate knowledge of either English or French or, alternatively, he is the spouse, widow or widower of a Canadian or, either he was 40 or more years of age at the time of lawful admission and has resided in Canada for more than 10 years or he was less than 40 at the time of admission and has resided continuously in Canada for more than 20 years.
- (5) He must have an adequate knowledge of the responsibilities and privileges of citizenship.
- (6) He must intend to comply with the Oath of Allegiance and to have his place of domicile permanently in Canada.

At the conclusion of a court hearing, the decision of the court is forwarded to the Minister responsible for the administration of the Canadian Citizenship Act. If the decision is favourable and a certificate of Canadian Citizenship is granted by the Minister, it is forwarded to the clerk of the court who shall inform the applicant of the date and time he is to appear before the court to take the Oath of Allegiance, renounce his previous nationality and receive his certificate. Where a court finds that an applicant does not possess the required qualifications to be granted citizenship, the Minister, upon receipt of the decision, will so advise the applicant and give him notice that he may, within 30 days of receipt of such notice, appeal the decision to the Citizenship Appeal Court. The Citizenship Appeal Court consists of one or more designated judges of the Exchequer Court of Canada. If a court rejects an application and this decision is upheld by the Citizenship Appeal Court or if an application is refused by the Minister, the applicant has the right to file a new application two years after the date of rejection.

Status of Married Women.—The Canadian Citizenship Act places no disabilities upon the married woman. She neither acquires nor does she lose Canadian citizenship by marriage. In order to acquire Canadian citizenship she must apply in exactly the same manner as does a man. The Canadian Citizenship Act also enables a woman married to an alien whose nationality she acquired upon marriage to divest herself of Canadian citizenship by the filing of a declaration of renunciation. Finally, it provides a means whereby a woman, who had become an alien through marriage prior to Jan. 1, 1947, may acquire the Canadian status she would otherwise have assumed on that date.

Status of Minor Children.—Alien and British subject minor children do not automatically become Canadians with their parents. After one parent has become a Canadian, the responsible parent of that child, his mother if she has de facto custody of the child or maintains him, the tutor or the legal guardian of the child may apply for citizenship on the child's behalf. Application is made to the Registrar of Canadian Citizenship, Ottawa. Provision is also made in the Citizenship Act for the granting of a certificate of citizenship to a minor child in special circumstances.

Loss of Canadian Citizenship.—Canadian citizenship may be lost in the following manner:—

- (1) A Canadian citizen who when outside of Canada and not under disability acquires by a voluntary and formal act other than marriage the nationality or citizenship of a country other than Canada. This does not apply if the country is at war with Canada at the time of acquisition but in such a case the Minister may order that he cease to be a Canadian citizen. The purpose of this is to hold the person, if deemed necessary, to his obligations as a Canadian.
- (2) A natural-born Canadian citizen who is a dual national by birth or through naturalization, and any Canadian citizen on marriage, may after attaining the age of 21 cease to be a Canadian citizen through the making of a declaration of renunciation thereof.
- (3) A Canadian citizen who under the law of another country is a national or citizen of such country and who serves in the armed forces of such country when it is at war with Canada. This does not apply if the Canadian citizen became a national or citizen of such country when it was at war with Canada.

Prior to the 1967 amendments of the Citizenship Act, a person, other than a natural-born Canadian, who since becoming a Canadian had resided outside of Canada for 10 consecutive years automatically ceased to be a Canadian; this provision for automatic loss has been removed from the Citizenship Act.

Loss of Citizenship by Revocation—Applicable Both to Non-natural-Born and to Natural-Born Canadians.—Prior to the 1967 amendments of the Citizenship Act, loss of Canadian citizenship by revocation was limited under certain provisions of the Act only to non-natural-born Canadians. This discriminatory distinction between non-natural-born and natural-born Canadians has been removed from the Citizenship Act and the following substituted: Canadian citizenship may be revoked by the Governor in Council if, upon a report from the Minister, he is satisfied that *any Canadian citizen* has, when not under a disability, (1) acquired voluntarily, when in Canada, the citizenship of a foreign country (other than by marriage); (2) taken or made an oath, affirmation or other declaration of allegiance to a foreign country; (3) made a declaration renouncing his Canadian citizenship; or (4) obtained Canadian citizenship by false representation or fraud or by concealment of material circumstances.

Doubt as to Loss of Citizenship.—Where in the opinion of the Minister a doubt exists as to whether a person has ceased to be a Canadian citizen, the Minister may refer the question to the commission referred to in the Citizenship Act for a ruling and the decision of the commission or the court, as the case may be, shall be final.

Section 2.—Canadian Citizenship Statistics

According to the 1961 Census, which required that each person state the country to which he owed allegiance and had citizenship rights as at June 1, 1961, less than 6 p.c. of Canada's population reported a country of citizenship other than Canada. Table 1 shows the citizenship of the population by province.

Characteristics of Persons Granted Citizenship Certificates in 1969.—Since 1953 comparable detailed statistics showing the characteristics of persons granted citizenship certificates are available; such characteristics include age, marital status, occupation, period of immigration, residence and previous nationality. The number of applicants fluctuates from year to year but it is known that about 40 p.c. of the immigrants who entered Canada during the past ten years who are eligible for Canadian citizenship have become Canadians.

Of the 59,900 persons granted citizenship in 1969, fewer than 1 p.c. had immigrated to Canada before 1921, 1 p.c. in the period 1921-40, 6 p.c. in the period 1941-50 and 92 p.c. after 1950. Regionally, these new citizens were distributed as follows: 2 p.c. in the Atlantic Provinces, 22 p.c. in Quebec, 49 p.c. in Ontario, 12 p.c. in the Prairie Provinces and 15 p.c. in British Columbia. Almost 89 p.c. of them resided in urban centres.

About 29 p.c. of the persons naturalized in 1969 previously owed allegiance to a Commonwealth country, 14 p.c. were former citizens of Italy, 9 p.c. of Germany, 6 p.c. of the Netherlands, 6 p.c. of Greece, 5 p.c. of Yugoslavia and 4 p.c. of Portugal. Most of the persons designated as “stateless” were born in Poland, the Soviet Union, Yugoslavia, Hungary, Germany, Czechoslovakia or Romania.

Among the males in the labour force naturalized in 1969, craftsmen, production process and related workers occupations were reported by 43 p.c., 17 p.c. were in professional and technical occupations, 11 p.c. were in service and recreation occupations, labourers accounted for 6 p.c., managerial occupations for 8 p.c. and clerical workers and salesmen for 4 p.c. each. Of the females, 45 p.c. were homemakers and, among those employed outside the home, 28 p.c. were in clerical occupations, 26 p.c. were in the craftsmen, production process and related workers occupations group, and 20 p.c. were in service and recreation occupations.

Young Canadians in the isolated community of Great Whale River on the east coast of Hudson Bay and those in Toronto would seem to have little in common but a northern excursion made by a group of Toronto students became an enlightening experience for both groups that resulted in mutual enjoyment and new-found friendships.

The interpretation of the symbols used in the tables throughout the Year Book will be found on p. vii of this volume.

Vital statistics provide a key to the interpretation of population development—a measure of the pace at which the population is growing, the rate at which women are marrying and reproducing, and the effect this has on the age and sex distribution of the population, as well as the relative importance of the diseases that cause death each year. Vital statistics constitute the record of births, deaths, marriages and divorces registered in the provinces and territories of Canada. The continuity of such data gives a constant guide to the planning, operation and evaluation of many national activities, particularly in the fields of public health, education, community planning and various types of business enterprise.

This Chapter gives a fairly detailed coverage of the vital statistics information available, gives life tables for males and females and presents a comparison of the principal Canadian vital statistics rates with those of other countries. In making international and interprovincial comparisons of birth, death and marriage rates, it is important to note that part of the differences observed over a period of years as between countries, provinces or local areas may be caused by differences in the sex and age distribution of the populations involved. Similarly, rates for any one area may be affected by changes in such distribution. The population data upon which vital statistics rates are computed are given in Chapter III of this volume. Births and deaths are classified by place of residence (births according to the residence of the mother) and marriages by place of occurrence.

The history of the collection of vital statistics in Canada is covered in the 1948-49 Year Book, pp. 185-188. Detailed information is given in *Vital Statistics* (Preliminary Report) (Catalogue No. 84-201), *Vital Statistics of Canada* (Catalogue No. 84-202), *Causes of Death* (Catalogue No. 84-203) and in other regular and special reports; in addition, certain unpublished data are available on request.

* Revised in the Vital Statistics Section, Health and Welfare Division, Dominion Bureau of Statistics. This Chapter carries data for the year 1968, with comparisons for previous years; principal vital statistics for 1969 will be available by the time this volume goes to press and may be found in Appendix II.

Section 1.—Summary of Vital Statistics

Table 1 gives a summary for reference purposes of the principal vital statistics of the provinces and territories of Canada for five-year periods 1941-65 and for single years 1966-68. Table 2 shows similar data for urban centres having at least 20,000 population at the date of the 1966 Census for the year 1968 with comparative averages for 1961-65.

1.—Summary of Principal Vital Statistics, by Province, 1941-68

NOTE.—Figures from 1921, when the collection of national statistics was initiated, are given in previous editions of the Year Book. Figures for neonatal mortality (within the first four weeks of birth) are given on p. 311 and those for divorces on p. 320.

¹ Excess of births over deaths. ² Deaths under one year of age; deaths within the first four weeks of birth are given on p. 311. ³ Per 1,000 population. ⁴ Per 1,000 live births. ⁵ Per 10,000 live births. ⁶ Figures for Newfoundland are included from 1949.

2.—Summary of Principal Vital Statistics for Incorporated Urban Centres of 20,000 Population or Over,
1968 with Average for 1961-65

Note.—Birth, death and marriage rates cannot be computed for 1968 or the period 1961-65 since urban centre populations are not known for intercensal periods. Figures for certain urban places may not be comparable for the periods shown because of changes in area boundaries, particularly for those indicated by an asterisk (*). Urban centres are designated in this table by the following abbreviations: c. = city, t. = town, vl. = village, b. = borough, s.m. = suburban municipality, and d.m. = district municipality.

¹ As at the date of the 1966 Census; residents only.

² Deaths under one year of age.

³ Deaths under 28 days.

⁴ By place of occurrence.

⁵ Population fewer than 20,000 at date of 1966 Census but included as the largest urban centre in Prince Edward Island.

⁶ Per 1,000

VITAL STATISTICS RATES, 1930-68

Section 2.—Births*

No accurate figures on Canadian crude† birth rates are available prior to 1921, when the annual collection of official national figures was initiated. However, the following rough estimates of the average annual crude rates for each ten-year intercensal period between 1851 and 1921 may be inferred from studies of early Canadian census data:—

Intercensal Period	Estimated Average Annual Crude Birth Rate (per 1,000 Population)	Intercensal Period	Estimated Average Annual Crude Birth Rate (per 1,000 Population)
1851-61.....	45	1891-1901.....	30
1861-71.....	40	1901-11.....	31
1871-81.....	37	1911-21.....	29
1881-91.....	34		

The general trend in the national crude birth rate (i.e., per 1,000 total population) since 1930 is shown in the chart above and since 1941 in Table 1. The annual rates declined gradually but steadily from 29.3 in 1921 to a record low of 20.1 in 1937, recovered sharply in the late 1930s and during World War II to 24.3 in 1945, and following the War

* Unless otherwise indicated, "births" in this Section refers to infants born alive; stillbirths are dealt with under a separate heading on pp. 299-300 and under multiple births on pp. 293-294. For international comparisons, see Section 7, pp. 326-327.

† A crude rate is one based on the total population.

rose to a postwar high of 28.9 in 1947. Between 1948 and 1959 the rate remained remarkably stable at between 27.1 and 28.5 but has since been declining and in 1968 reached 17.6, the lowest on record. Part of this decline is attributable to the fact that the crude birth rate is based on *total* population, which now includes larger proportions of 'non-productive' population. Even if the annual number of births were to remain stable, the net effect of an increase in population would be a declining crude birth rate.

The rates in most provinces followed trends very similar to the national trend but showed some regional differences in recent years. Although all provinces had record high rates immediately following World War II, average birth rates in Ontario and the western provinces were higher during the 1951-55 period than during 1946-50 and those for Quebec and the Maritimes were lower than during 1946-50. In fact, Ontario, Alberta and British Columbia had record *high* crude birth rates during the 1956-60 period. In 1968, Nova Scotia, New Brunswick and Quebec had record *low* rates.

It is often erroneously assumed that the Province of Quebec has not only the largest number of births annually but the highest rate in Canada. Since the late 1930s or early 1940s Newfoundland, in some years New Brunswick and, since 1953, Alberta have had higher birth rates than Quebec. Table 1, pp. 285-286, shows that six provinces—Newfoundland, Alberta, New Brunswick, Prince Edward Island, Nova Scotia and Saskatchewan, in that order—had higher crude rates than Quebec or Ontario in 1966, followed by Manitoba and British Columbia, and that, in 1968, Quebec had the lowest crude birth rate. However, since these crude rates are based on the *total* population they do not reflect the true fertility of the women of reproductive ages in the different provinces or the number married within these reproductive ages. A more accurate measure of the true birth rate is one based on the number of married women between the ages of 15 and 45 (see pp. 294-296).

Also contrary to popular impression, since 1953 more babies were born each year in Ontario than in the Province of Quebec; in 1968, 126,257 babies were born to Ontario mothers as compared with 96,622 to Quebec mothers. Altogether, 364,310 children were born alive in Canada in 1968, 114,965 fewer than the record 479,275 born in 1959 and 6,584 fewer than the number born during 1967.

Sex of Live Births.—With rare exceptions, wherever birth statistics have been collected they have shown an excess of male over female births. No conclusive explanation of this excess has yet been given. Nevertheless, it is so much an accepted statistical fact that a proper ratio of male to female births has become one of the criteria of complete registration. The number of males to every 1,000 females born in Canada has averaged around 1,057 since the middle 1930s. Provincial sex ratios vary much more widely because of the relatively small number of births involved—the smaller the total number of births, the greater the chance of wide sex-ratio variations from year to year. In 1968, 1,060 male infants were born for every 1,000 females—the highest ratio since 1952.

3.—Sex Ratios of Live Births, 1941-68

NOTE.—Figures for Newfoundland are included from 1949 and those for the Yukon and Northwest Territories from 1950.

Year	Males	Females	Males to 1,000 Females	Year	Males	Females	Males to 1,000 Females
	No.	No.	No.		No.	No.	No.

1962.....	240,870	228,823	1,053	1968.....	187,489	176,821	1,060

Hospitalized Births.—In 1968, 99.5 p.c. of all Canadian births occurred in hospital as compared with 91.7 p.c. ten years previously. Before the initiation in 1958 of the federal-provincial hospital insurance programs—in which all provinces were participating by 1961—there were rather wide variations among the provinces in percentages of hospitalized births. Such variations were caused by the existence of prepaid or provincially sponsored hospital, maternity or medical care plans in some provinces, the unavailability of hospital facilities in others—particularly in remote rural areas—and preference for home delivery in some local areas. Little variation now exists and only in the Yukon and Northwest Territories do the percentages fall below 99.2 p.c.; in the Yukon Territory it was 96.8 p.c. in 1968 and in the Northwest Territories 88.0 p.c.

Births in Urban Centres.—Table 2, pp. 287-290, shows the number of births in 1968, as compared with the average for 1961-65, to mothers residing in each urban centre of 20,000 population or over in 1968. Because the populations of urban centres are not known for intercensal years, birth rates cannot be computed for those years.

Illegitimacy.*—In 1968, 9.0 p.c. of the live births in Canada were illegitimate. This percentage is low compared with that of many countries of the world but has been rising recently, as shown in Table 4. In some provinces the percentages of illegitimate births have more than doubled during the past 20 years. It should be noted that the increase in the proportion of the illegitimate births is attributable to two factors: first, the relative increase in the proportion of women aged 15-24 (in the female population of child-bearing age) where the probability of having an illegitimate birth is the highest; and second, since legitimate fertility has declined sharply in recent years, the relative weight of the illegitimate fertility has increased.

4.—Illegitimate Live Births and Percentages of Total Live Births, by Province, 1941-68

NOTE.—Figures for Newfoundland are included from 1949 and those for the Yukon and Northwest Territories from 1951.

Multiple Births.—Approximately 1 p.c. of the confinements result in multiple births, and 99 p.c. of the multiple births are twins. One out of about 10,000 confinements results in triplets. Two sets of quadruplets were born in 1960 and one set in each of 1962, 1963, 1964 and 1968. In 1968 a total of 364,593 mothers bore a total of 368,253 infants, of which 364,310, or almost 99 out of every 100, were born alive.

*The term "illegitimate", as used here, does not refer to all births conceived out of wedlock but is necessarily restricted to those in which parents reported themselves as not having been married to each other at the time of birth or registration and, in Ontario, to those in which the marital status of the mother was reported as "single" at the time of birth or registration.

Fertility Rates.—The sex and age composition of a population is obviously an important factor in determining crude birth, marriage and death rates. Since almost all children born each year are to women between the ages of 15 and 45, variations in the proportion of women of these ages to the total population will cause variations in the crude birth rate of different countries—or of different regions within a country—even though the actual rates of reproduction or *fertility* of the women in these age groups in each country or region are identical.

A more accurate measure of the fertility of a population would be one based on the number of women of reproductive age, that is those 'able' to bear children, and a still more accurate measure would be one based on the number within this group that are married, that is those 'eligible', as it were, to bear children. Each type of rate has its uses, depending on the comparisons required. The two types are compared in Table 6, and indicate the variations in each type as between provinces and the provincial trends over the years 1965-68.

The number of infants born in relation to every 1,000 women in the population between the ages of 15 and 45 has been declining for the past few years, dropping from 103.4 in 1965 to 83.0 in 1968. However, the rates varied among the provinces from 72.9 to 159.5 during the past four years; in 1968, Newfoundland, Prince Edward Island, Saskatchewan, Alberta, New Brunswick and Nova Scotia had the highest rates and Quebec, Ontario, British Columbia and Manitoba the lowest, in order of mention. On the other hand, the average annual number of infants born to every 1,000 *married* women in the country as a whole dropped from 148.4 to 118.8 during the same period. According to this measure, the four eastern provinces and Saskatchewan had, on the whole, the highest rates.

Canada².....	103.4	93.4	86.7	83.0	148.4	133.9	124.4	118.8

¹ Since the number of births to women over age 44 is quite small, rates are here restricted to women under 45.

² Excludes the Yukon and Northwest Territories.

The rates shown in Table 6 are *crude* in the sense that they do not take into account differences in fertility in the component age periods within the female reproductive life span, nor the proportions of married women in each age period. It is therefore conventional practice to calculate what are termed *age-specific fertility rates*, i.e., the number of infants born annually to every 1,000 women in *each* of the reproductive age periods, again either for all women or for those who are married. Table 7 provides these two sets of rates for 1941, 1951, 1956 and 1961-68.

Another measure of fertility in a country is obtainable from what is conventionally referred to as a *gross reproduction rate*. The gross reproduction rates shown in Table 7 indicate the average number of female children born each year to each woman living through the child-bearing ages. In other words, this figure represents the average number of females that *would* be born to each woman who lived to age 50 *if* the fertility rate of the given year remained unchanged during the whole of her child-bearing period. A gross reproduction rate of 1.000 indicates that, on the basis of current fertility and without making any allowance for mortality among mothers during their child-bearing years, the present generation of child-bearing women would exactly maintain itself. Canada has always had one of the highest gross reproduction rates among the industrialized countries of the world. Even during the period of low birth rates in the 1930s the rate varied between 1.300 and 1.500 and since World War II has ranged from 1.640 to a record high of 1.915 in 1959; in 1968 the rate stood at 1.184, still 18 p.c. more than the number required for the population to replace itself but down one third from that of five years ago. With minor exceptions, provincial reproduction rates are also well above the replacement level.

Table 7 indicates that in 1968, considering all women, whether married or not, women in their 20s were the most reproductive, as might be expected; on the average, for every 1,000 women between the ages of 20 and 25, 153 infants were born during that year or, expressed another way, about one woman out of six or seven in that age group gave birth to a live-born infant. This compares with a rate of 147 for women in the age group 25-29. However, among married women, teen-age mothers have consistently had the highest fertility, with almost two out of five bearing a child in 1968, while more than one out of every seven married women in their early 20s had a child, only slightly more than those in their late 20s.

Age of Parents.—Age of parents is an important variable in any analysis of birth statistics. The distribution of legitimate and illegitimate live births by age of the parents is given in Table 8.

Almost 9 p.c. of the legitimate children born in 1968 were born to mothers under 20 years of age, in over two fifths of the births the mother was under 25 years, and in over two thirds, under 30 years; in over one fifth of the births the father was under 25 years of age, and in over one half of all births the father was under 30 years. On the other hand, over two fifths of the illegitimate infants were born to mothers under 20 years of age and an additional 37.5 p.c. to mothers under 25 years. The average age of all the married mothers to whom a child was born in 1968 was 27.1 and of the fathers 30.2 years; ten years ago the average ages of the parents were 28.2 and 31.5, and thirty years ago 28.9 and 33.3, respectively.

The median age of unmarried mothers who bore a live-born child in 1968 was 20.8; that is, half of the mothers of the 31,681 'illegitimate' children delivered in 1968 were under 20.8 years of age.

It should be kept in mind that the higher proportion of births occurring at younger ages in recent years does not necessarily mean that couples are having their children at a younger age. Two things should be noted: first, the decline in fertility in recent years has been greatest among older women and, consequently, births occurring at younger ages automatically form a greater proportion of total births than formerly, as well as produce a lower average age at birth; secondly, this effect is compounded by the growing proportion of women in early child-bearing ages where fertility is higher or, more accurately, has declined less than among older women.

8.—Live Births, by Age of Parents, 1968

Order of Birth.—Table 9 shows the order of birth of all live-born infants in 1968 according to the age of the mother. As would be expected, 33,475, or over four fifths of the 40,708 infants born to mothers under 20 years of age, were the first live-born child, whereas almost 12 out of every 25 of the children born to mothers of 20-24 years were their second or later live-born child. In 1968, 251 infants were born to mothers who had not yet reached their 15th birthday.

Table 10 summarizes the pattern of family formation since 1941 and shows that the percentages of first and second children have been increasing in recent years. As mentioned above for illegitimate births and average ages of parents, the decline in fertility and the recent evolution of the age structure of the female population affect the percentage distribution of births by parity. The increasing proportion of women in early child-bearing ages, where the majority of low-parity births occur, tends obviously to increase the proportion of these births. Also, as explained for illegitimate births, the decline in the number of high-parity births also contributes to the increase in the percentage of low-parity births since the latter are taken as a percentage of *total* births. These two factors more than offset a decline in recent years in the probability of having a first or a second child as compared with the early 1960s. For example, if the 1962 fertility rates for first and second births had prevailed in 1968, there would have been an extra 40,000 births; the corresponding rates for 1957 would have yielded 60,000 additional births. Thus, the postponement of births by recently married couples is one of the main factors in the decline in the annual number of births in recent years.

Birthweight.—Excluding Newfoundland, information on birthweight of newborn infants has recently become available from provincial records of birth. These data, in addition to their usefulness in calculating the average weights of newborn infants, are of importance from the public health and medical points of view in throwing light on the number of immaturely developed foetuses that are delivered alive. According to criteria recommended by the World Health Organization, infants of 5½ lb. or less at birth are considered 'immature' and hence exposed to a much greater risk of dying than those over this weight. Weight of the infant at birth depends on a host of maternal factors—biological, physiological, environmental, nutritional, etc.—information on which is not available from the birth records, but some information is available on the age of the mother and length of pregnancy before delivery.* Analysis of this information shows that (1) there are variations in average weight according to the age of the mother, (2) women under 20 and over 35 tend to produce higher proportions of immature infants, so that the late 20s and early 30s would appear to be the ideal ages for motherhood, and (3) almost all infants of less than 28 weeks gestation are delivered 'immature' according to the definition. The average single male infant born at full term weighs about 7½ lb. at birth and the average female about 4 oz. less.

* Obtainable from the Vital Statistics Section, DBS.

Stillbirths.*—The 3,926 stillbirths of at least 28 weeks gestation that were delivered in 1968 represented a ratio of 10.8 for every 1,000 fetuses born alive. As is evident from Table 11, the stillbirth ratio has been decreasing steadily—except for a slight increase in 1967—and has been cut by more than half over the past quarter-century. Although the variations between provincial ratios have never been wide, ratios in some provinces have been reduced more than in others. The stillbirth ratio among unmarried mothers has been consistently higher than that among married mothers but the difference is narrowing.

¹ Exclusive of Newfoundland for all years and the Yukon and Northwest Territories for 1941-50.

² Figures for Newfoundland are included from 1949.

Table 12 illustrates the fact that the risk of having a stillborn child increases with the age of the mother. Although stillbirth ratios for mothers of all ages have been declining, they continue to be three to four times as high for mothers over 40 years of age as for mothers under 30. The average age of mothers who bore stillborn children in 1968 was 28.7 years; the median age was 27.4. The average age of mothers who bore legitimate live-born children was 27.1 and of those who bore illegitimate live-born offspring was 22.8. Causes of stillbirths in 1968 are shown in Table 13.

* Stillbirth figures given here refer only to fetuses of 28 or more weeks gestation which "showed no sign of life". Up to the end of 1963, only fetuses delivered after at least 28 weeks pregnancy which showed no sign of life were required to be registered with the provincial authorities; as of Jan. 1, 1964, all provinces (except Newfoundland) provide for the compulsory registration of all stillbirths of 20 or more weeks gestation, a 'stillbirth' being defined as "the complete expulsion or extraction from its mother, after at least 20 weeks pregnancy, of a product of conception in which, after such expulsion or extraction, there is no breathing, beating of the heart, pulsation of the umbilical cord, or unmistakable movement of voluntary muscle". Available data for stillbirths of 20-27 weeks pregnancy are not shown here but are obtainable from the Vital Statistics Section, DBS.

Section 3.—Deaths*

No official crude† death rates are available prior to 1921, but some indication of these may be obtained from studies of the early censuses as follows:—

Intercensal Period	Estimated Average Annual Crude Death Rate (per 1,000 Population)	Intercensal Period	Estimated Average Annual Crude Death Rate (per 1,000 Population)
1851-61.....	22	1891-1901.....	16
1861-71.....	21	1901-11.....	13
1871-81.....	19	1911-21.....	13
1881-91.....	18		

As is typical of pioneer populations, Canada had a high death rate in the mid-1850s when the country was still in the throes of pioneer settlement. The crude death rate during that period is estimated as between 22 and 25. Although no data are available, it

* For international comparisons, see Section 7, pp. 326-327.

† A crude rate is one based on the total population.

is assumed that, while mortality at all ages was high, the rate among infants, children and young adults must have been particularly high since even in the 1920s mortality in these ages was still quite high. With the gradual increase in population density and in urbanization and improved sanitation and medical services, the crude rate was halved during the 80 years between 1851 and 1930, dropping from about 22 to 11. It declined steadily to slightly over 8 in the late 1950s and dropped to a low of 7.4 in 1967 and 1968. This is one of the lowest crude death rates in the world.

Table 1, pp. 285-286, shows the trends in crude death rates since 1941 in the provinces and territories. The low rates shown for Newfoundland and Quebec are attributable mainly to the large proportions of young people in their populations and the relatively high rates for British Columbia to the high proportion of elderly people in that province.

Subsection 1.—General Mortality

Age and Sex Distribution of Deaths.—During the period of national vital statistics (1921 to date) the mortality pattern at all ages has been downward. Of major significance in lowering the over-all death rate were the reductions in infant mortality, in childhood death rates and in those of young adults.

Table 14 shows that, between 1941 and 1968, mortality rates among infants (under one year of age) dropped by nearly two thirds, and death rates for children 1-4 years of age by about four fifths. Rates for older children and young adults also declined steeply. Despite the reduction in infant mortality, more deaths still occur in the first year of life than in any other single year. As shown in Table 15, males under age 40 accounted for 29.5 p.c. of all male deaths in 1941 but for only 14.0 p.c. of such deaths in 1968; in 1941, 28.8 p.c. of all female deaths were of persons under age 40, a percentage that declined to 11.8 in 1968. Percentage reductions in the mortality of older males since 1941 were more moderate, and over the 55-69 range they were quite small; the corresponding reductions for older females, however, were very substantial in every age group up to 85.

AGE-SPECIFIC DEATH RATES, 1968

The sharp declines in mortality in the age groups under 40 has tended to increase the population in the older groups and to raise the average age at death. Over the 1941-68 period, the average age at death among males rose from 51.5 to 62.9 and the average age for females increased still more markedly, from 53.4 to 67.1. Over the same period, the male median age at death rose 7.4 years, from 61.2 to 68.6 and the gain for females was 10.4 years, from 63.6 to 74.0. This means that half of the females dying during 1968 were more than 74 years old.

² The age above and below which half of the total number of annual deaths occurred.

Table 16 illustrates the variations from province to province in average and median ages at death; these, in turn, are dependent in large measure on the age distribution of the population as well as on varying mortality rates at each age. For example, in Newfoundland a high mortality rate among infants and young children reduces the average and median age for that province, but the reverse is the case in British Columbia and several other provinces with older populations.

¹ The age above and below which half of the total number of annual deaths occurred.

Deaths in Urban Centres.—Table 2, pp. 287-290, shows the numbers of deaths in urban centres of 20,000 population or over in 1968 and the average numbers for the period 1961-65; death rates for urban centres cannot be computed for these years since their populations are not known for intercensal years.

Causes of Death.—Table 17 summarizes the most recent figures for deaths and death rates in Canada grouped according to the International Abbreviated List of 50 Causes. Over 80 p.c. of the deaths are caused by diseases of the heart and arteries, cancer, accidents, diseases of early infancy, the respiratory diseases, and nephritis. Because of the rise in the average age at death during the past thirty years, the proportion of deaths from causes that affect older people has increased. Cancer and diseases of the cardiovascular-renal systems now account for a larger proportion of all deaths than formerly. By the same token, deaths from causes that affect mainly children and young adults have declined.

MAIN CAUSES OF DEATH, 1931-68 (RATE PER 100,000 POPULATION)

Subsection 2.—Infant Mortality

Table 1, pp. 285-286, and Table 19 show the striking improvement that has taken place in the mortality rates among infants (under one year of age) during the past 28 years. Although 57,995 of the 2,460,191 children born in the six years 1963-68 died before reaching their first birthday, 173,017 others lived who *would have died* at the infant mortality rate prevailing in the period 1926-30. This improvement is attributable to many factors—the higher proportion of births taking place in hospital or under proper prenatal and postnatal care, better supervision of water supplies, improved sanitation, pasteurization of milk, the use of antibiotics, improved home environment as a result of higher living standards and, in recent years, the generally lower age of mothers.

The variations that exist in infant mortality rates from province to province and from one locality to another may be explained by differences in the extent to which these factors apply provincially or locally. Among the provinces, the 1968 male infant mortality rates ranged from a low of 21.0 to a high of 38.8, compared with the national average of 22.9—the latter including the high rate among the Northwest Territories aboriginal population. Female rates ranged from 13.7 to 22.4, compared with the national rate of 18.6. Although the national and provincial rates for both sexes had been declining steadily for some years, for some unknown reason there were some reversals in provincial rates during 1968.

Table 19 shows that mortality among male infants is roughly 25 p.c. higher than that among female infants for Canada, with wider variations for the individual provinces. For the country as a whole, out of every 1,000 infant boys born alive in 1968, 23 died before reaching their first birthday, whereas out of every 1,000 infant girls born alive, 19 died within one year. As already pointed out, there are on the average 1,056 males born to every 1,000 females but, because male infant mortality is higher, the excess of males is reduced greatly by the end of the first year. For example, in 1963-68 there were 1,262,898 male children born compared with 1,197,293 female children, an excess of 65,605 or 5.5 p.c.; in the same period, 33,204 male children died during their first year compared with 24,791 female children so that the excess of males at one year of age was reduced to 57,192 or 4.9 p.c.

Infant Mortality in Urban Centres.—Because of the relatively small numbers of infant deaths in individual cities and towns, the rates for these centres usually vary widely from year to year. As is evident from Table 2, pp. 287-290, many cities and towns have maintained consistently low rates as compared with the national rate or the rate for the province in which they are situated, while others have consistently higher rates.

Causes of Infant Deaths.—In 1968 almost 69 p.c. of the infant deaths were caused by immaturity, congenital malformations, pneumonia, postnatal asphyxia and atelectasis, and injury at birth. Immaturity was the underlying cause of 1,328 deaths and an added complication in 2,041 others. Congenital malformations accounted for 1,437 fatalities, pneumonia for 778, postnatal asphyxia and atelectasis for 852 and injury at birth for 804. Rates for all of these causes (except injury at birth) decreased in 1968.

Neonatal Mortality.—Deaths occurring within the first four weeks following birth are conventionally referred to as 'neonatal' deaths. Table 21 shows that about 71 p.c. of all infant deaths occurred in this hazardous neonatal period during 1968 and, as would be expected, were caused mainly by conditions associated with pregnancy or delivery. Table 22 gives numbers and rates of neonatal deaths for 1941-68 and the chart on p. 310 compares the major causes of such deaths in 1968 with all infant deaths from the same causes. Although neonatal death rates have been declining since 1941, there has been less reduction during the past five to 10 years and in fact slight increases in some provinces during the past two or three years.

¹ Prior to 1951, includes deaths under one calendar month of age; since 1951, includes deaths under 28 days.

Perinatal Mortality.—'Perinatal' mortality—the combined total of stillbirths and deaths of live-born infants occurring 'around' the natal period—is a relatively new vital statistics concept. Since such deaths frequently have the same underlying causes, associated with pregnancy or delivery, regardless of whether they occur before or after delivery, perinatal deaths are generally considered as including the combined total of stillbirths occurring after at least 28 weeks pregnancy and deaths of live-born infants who fail to survive the first week of life.

In 1968 there were 8,727 such 'deaths', of which 3,926 were stillborn and 4,801 live-born but failed to survive one week, with a national rate of 23.7 such deaths for every 1,000 total deliveries. This perinatal rate has declined slowly but steadily from 65.2 in 1921 to 23.7 in 1968.

Subsection 3.—Maternal Mortality

As indicated in Table 1, pp. 285-286, the number of mothers who die as the result of pregnancy or childbirth has been greatly reduced during the past two decades. The number stood at 99 in 1968 as compared with 135 in 1966 and 1965; the all-time low (88) was reached in 1967. Since 1951 the rate of maternal mortality per 10,000 births has been under 10;

since 1959 it has been under five. With this improvement, Canada's maternal death rate (2.7 in 1968) compares more favourably with those of other countries (see p. 327). Mortality among unmarried mothers is higher than among married mothers.

Causes of Maternal Deaths.—Table 23 shows the main causes of maternal deaths during the years 1966-68.

23.—Maternal Mortality and Rates per 100,000 Live Births, by Cause, 1966-68

685,686	Puerperal eclampsia and toxæmia.....	4	—	1	1	—	—
687-689	Other.....	7	7	9	2	2	2
	Totals, All Puerperal Causes	135	88	99	35	24	27

Of the 99 maternal deaths in 1968, 31 resulted from complications arising during pregnancy, about three fifths of these from some type of toxæmia; 32 resulted from a complication of delivery, 23 from a post-delivery complication and 13 from abortive delivery.

Age at Death.—Table 24 shows the distribution of maternal deaths by age group; the average age at death is about four or five years higher than the average age of all mothers at the time of childbirth. Although death rates for all age groups of mothers have been declining, there have been rather significant changes in the rates. The rate for mothers in the age group 30-34 is far higher than the rate for the 20-24 group, and the rate increases with the age of the mother.

Section 4.—Natural Increase*

The excess of births over deaths, commonly referred to as 'natural increase', is a very important factor in the growth of a population. Although the collection of Canadian birth and death statistics began only in 1921, some idea of the rate of natural increase in the early Canadian population may be learned from the estimates shown at the beginning of Sections 2 and 3, which resulted in the following natural increase rates:—

<i>Intercensal Period</i>	<i>Estimated Average Annual Natural Increase Rate (per 1,000 Population)</i>	<i>Intercensal Period</i>	<i>Estimated Average Annual Natural Increase Rate (per 1,000 Population)</i>
1851-61.....	23	1891-1901.....	14
1861-71.....	19	1901-11.....	18
1871-81.....	18	1911-21.....	16
1881-91.....	16		

Because of the combination of high birth rates and declining death rates—despite the fact that death rates were still relatively high—the annual rate of natural increase during the late 1800s and early 1900s varied between 14 and 23; in other terms, the population increased at the rate of 1.5 p.c. to 2.5 p.c. each year by natural increase alone, regardless of any increase attributable to immigration. During the 1920s and early 1930s the birth rate declined more than the death rate and the natural increase rate dropped to a record low of 9.7 in 1937. But higher birth rates during and after World War II and a gradually declining death rate caused the natural increase rate to rise steadily from 10.9 in 1939 to a record 20.3 in 1954. Although after that year there has been a steady drop because of declining birth rates, the natural increase rate in 1968 was still high at 10.2.

Table 1, pp. 285-286, gives average rates of natural increase in the provinces for five-year periods 1941-65 and for single years 1966-68. Table 25 gives the provincial figures for males and females separately for 1941, 1951, 1961 and 1966-68. High birth rates and declining death rates have given Newfoundland, Alberta, Saskatchewan and New Brunswick the highest rates of natural increase in Canada in recent years (excluding the Yukon and Northwest Territories).

* For international comparisons, see Section 7, pp. 326-327.

¹ Excludes Newfoundland and the Yukon and Northwest Territories.

The rates of natural increase are higher for females than for males in all provinces because of the higher death rates for males. In the western provinces particularly, the ratio of males to females in the total population is higher than in other parts of Canada and this in itself tends to lower the rate of natural increase. In Canada, a country with a fairly young population and where immigration has been on a large scale, an excess of males is to be expected but the higher rate of natural increase for females may gradually reduce this excess. The trend is toward an eventual excess of females in the total population—as there now is in most European countries—unless immigration again raises the male ratio or death rates among males are greatly reduced.

Natural Increase in Urban Centres.—The classification of births and deaths by place of residence makes it possible to compile the natural increase in the population of urban centres; natural increase for centres of over 20,000 population can be compiled from the birth and death figures given in Table 2, pp. 287-290.

Section 5.—Marriages and Divorces

Subsection 1.—Marriages*

In 1968 a record 171,766 marriages were solemnized in Canada, mainly because of the relative increase of men and women in the prime marrying ages—the late teens and the early 20s. This growing proportion of young men and women has advanced the crude marriage rate from a low of 6.9 per 1,000 population in 1963 to 8.3 in 1968. Table 26 gives the number of marriages and the marriage rates for Canada and the provinces for 1941, 1951, 1961 and 1966-68, together with percentages of brides and bridegrooms according to place of birth. For the country as a whole, 82 p.c. of the bridegrooms of 1968 were born in Canada and 66 p.c. in the province in which they were married; 85 p.c. of the brides were born in Canada and 73 p.c. in the province in which they were married. There are wide variations in the pattern of intermarriage of foreign-born and native-born persons as between provinces; in the older Atlantic Provinces and in Quebec and Saskatchewan, there is a greater tendency than in the other provinces to marry native Canadians and in these areas both partners are often born in the same province.

* For international comparisons, see Section 7, pp. 326-327.

¹ The ages below and above which half of the marriages occurred.

Religious Denominations of Brides and Bridegrooms.—The distribution of brides and bridegrooms by religious denominations is roughly the same as that for the population as a whole. Table 28 shows the relatively strong influence that religion has on marriage. About 65 p.c. of all marriages are between persons of the same religious denomination; in 1968 among those of Jewish faith it was about 88 p.c.; among Roman Catholics about 82 p.c.; United Church about 52 p.c.; and Eastern Orthodox about 66 p.c. Except for those of the Jewish faith, the proportions of persons of the same faith marrying appears to be declining slightly in recent years.

Subsection 2.—Divorces

Before World War I the number of divorces granted in Canada represented less than one per 1,000 of the yearly number of marriages. After that War, however, there was a definite upward trend; the number advanced to 8,213 in 1947, declined gradually to a post-war low of 5,270 in 1951 and since then has moved sharply upward; the 1968 figure of 11,343 was the highest on record.

The crude divorce rate rose from 36.0 per 100,000 population in 1960 to 54.7 in both 1967 and 1968. A relatively liberal federal divorce law became effective on July 2, 1968, which is expected to lead to a continued rise of the Canadian divorce rate; the impact of the new law will first appear during 1969 because few cases were completed under its provisions in 1968.

Section 6.—Canadian Life Tables

Life tables are measures of life expectancy compiled from the death rates prevailing over a period. They assume that a given cohort of people (usually 100,000) are born simultaneously in a particular year and continue to be subject all their lives to the death rates prevailing in that year, or perhaps to the average death rates for, say, a three-year period centred around that year. The "expected" deaths in the cohort are calculated (in the case of a "complete" life table) for the first year of life, second year of life, etc., and the diminishing cohort is "followed" for 100 or more years until it has been virtually eliminated. Life expectancy at birth is calculated for the entire cohort and, subsequently, remaining life expectancy is calculated for the survivors at one year, two years, etc. It should be realized that the assumptions of such a life table are never fulfilled in practice and that the hypothetical cohorts in life tables do not represent any actual population. Usually, the persons in an actual cohort born in the life-table year will have a higher life expectancy than those in the life-table cohort because, during their lifetimes, public health conditions will presumably constantly improve and standards of medical care will also presumably advance.

The function of the life table is to express in compact form the mortality trends of the period for which it is compiled. In particular, when a series of life tables for a given country can be compared, they show a great deal about the historical changes in the mortality conditions prevailing in that country. Six official series of life tables for Canada and the provinces and regions have been published to date, based on deaths in the three-year period around each of the Censuses of 1931, 1941, 1951, 1956, 1961 and 1966.

The life-table values for 1966 are given for selected years in Table 30. This table shows that, at 1965-67 mortality rates, 2,525 of 100,000 males born would have died in their first year with 97,475 surviving to one year of age, that 156 more would have died in their second year with 97,319 reaching their second birthday, and so on. There would be 252 survivors at 100 years of age. The "Probability of Dying" column shows the ratio between the population at each age and the number of "expected" deaths in the coming year. Finally, as already stated, the "Expectation of Life" column shows the number of remaining years of life that can be expected at each age, given the 1965-67 mortality rates.

Table 30 also shows that the male probabilities of dying were higher than the corresponding female probabilities over the entire period from birth to 90 years. Mortality rates, and consequently the probabilities of dying, were lowest at about age 10 for both sexes. Above this age the male probability rose quite rapidly, reflecting male accident mortality, and the female probability rose more gradually. Mortality for men between ages 20 and 35 was fairly constant but the male probability began to rise steeply at age 40, due mainly to cardiovascular mortality. Female probabilities after this age rose steadily but less rapidly. It may be observed that about 11,700 males would have died by age 50 as compared with 7,100 females, and that about 57,500 males would have survived to age 70 as compared with 74,400 females.

In the 1966 table, Canadian life expectancy at birth had reached a new high point of almost 68.8 years for males and 75.2 years for females—comparable to the expectancies for other countries with highly developed programs of medical and public health care. Because of the still substantial level of infant mortality, the expectations for male and female children one year old were somewhat higher than the corresponding expectancies at birth. Expectation at age 20 was 51.5 years for men and 57.4 years for women and, at age 40, 33.0 years for men and 38.2 years for women. By age 65, the remaining expectancies were 13.6 years for men and 16.7 years for women.

Table 31 summarizes the life expectancy figures extracted from the Canadian life tables for 1931, 1941, 1951, 1956, 1961 and 1966. According to these figures, male life expectancy at birth rose steadily from 60.0 years in 1931 to 67.6 years in 1956 and then more slowly to 68.8 years in 1966 for a total advance of 8.8 years. Female expectancy at

birth rose more quickly than male, and substantially even from 1956 to 1966. The total increase was 13.1 years, from 62.1 years in 1931 to 75.2 years in 1966. The gap between male and female expectancy at birth rose from 2.1 years in 1931 to 6.4 years in 1966.

An examination of the expectancies at one year of age shows that lower levels of infant mortality greatly increased expectancy at birth. Male expectancy at one year of age rose by 4.8 years over the 35-year period and showed virtually no change between 1961 and 1966. Female expectancy at one year, however, rose by exactly 10 years, from 65.7 in 1931 to 75.7 in 1966, and showed a moderate increase since 1961. It may be noted that, in 1931, expectancy at birth was considerably lower than expectancy at one year of age, and that in 1966 the difference was much smaller. Male expectancy at age 20 rose by only 2.5 years over the 1931-66 period and not at all between 1961 and 1966. The corresponding

¹ Figures for 1931 and 1941 are exclusive of Newfoundland.

gain for females was 7.6 years. Female expectancy at age 20 in 1966 was nearly six years above male expectancy. Male expectancy at age 40 inched up by about a year over the period to reach 33.0 years in 1966, while the corresponding female expectancy rose over five years from 33.0 years in 1931 to 38.2 years. At age 65, male expectancy rose 0.6 years from 13.0 in 1931 to 13.6 in 1966, while female expectancy advanced three years from 13.7 to 16.7 in the same comparison. The 1966 gap between male and female expectancy was therefore 5.2 years at age 40 and 3.0 years at age 65.

The improvement in life expectancy for children and young adults was largely due to greatly reduced mortality from infectious diseases. Gains in life expectancy for adult males have been held down by, among other factors, (1) continued high cardiovascular mortality, (2) continued high accident mortality, and (3) the rise in lung cancer mortality. Further improvements in life expectancy seem primarily to depend upon (1) additional reductions in infant mortality, (2) lower accident mortality rates, especially among young men, and (3) advances in combating diseases associated with middle and old age, such as cardiovascular-renal conditions, cancer and respiratory conditions. Up to now, these diseases have proved very difficult to control and it is therefore doubtful whether future improvement in life expectancy will be comparable with the advance shown in the past 35 years.

Table 32 shows the life expectancies for five Canadian regions for selected years over the period 1931-61, and the corresponding expectancies for all ten provinces for 1966. The steady widening of the gap between male and female expectancies, so evident at the national level, was common to the expectancies for all five regions. Throughout the 1931-61 period, the Prairie Provinces showed the highest male expectancies and, in the later years, the highest female expectancies as well. The Quebec expectancies were consistently the lowest but they showed the largest gains over the period. Between 1931 and 1961, Quebec life expectancies at birth rose by 11.1 years for males and 15.0 years for females, as compared with the national advances of 8.4 years for males and 12.1 years for females.

In 1966, for the first time, expectancies were calculated for all ten provinces. Male expectancies at birth ranged from 70.5 for Saskatchewan to 67.9 for Quebec, a difference of 2.6 years; Saskatchewan also had the highest expectancies for females at 76.5 years and Quebec the lowest at 73.9 years. In general terms, it may be stated that 1966 expectancies for all four western provinces, at all the selected ages, were moderately above the national average, with the Saskatchewan rates being the highest in all cases. Ontario rates were fairly close to the Canadian average, except those for older men which were slightly below it. Quebec rates were still the lowest in the country, rather less than a year below the national average for males from birth to age 40 and somewhat more than a year below the national average for the corresponding range for females. For the Atlantic Provinces, expectancies at birth and at one year of age clustered fairly closely around the Canadian average, although the Newfoundland female expectancy at birth was a little lower. This statement also applies to expectancies at age 20, with Newfoundland males slightly above the national level. For older males, most Atlantic region expectancies were a little above the national figure and for older females they fluctuated about the average.

Section 7.—International Comparisons of Vital Statistics

Table 33 gives a summary of Canada's national and provincial vital statistics rates along with those of several other countries. It will be noted that among the countries listed the low crude death rate in Canada is bettered by two countries—Venezuela and Japan—and that some of the provinces have lower rates than most other countries. The Canadian birth rate ranks seventeenth among those listed. However, 11 countries reported lower rates of infant mortality, notably Sweden, the Netherlands and Finland—12.9, 13.6 and 14.0, respectively, as compared with Canada's rate of 20.8.

33.—Principal Vital Statistics Rates of Selected Countries, 1968

Note.—Countries are ranked according to the highest rates for births, marriages and natural increase and according to the lowest for deaths. Sources: United Nations and World Health Organization publications and certain countries concerned.

The interpretation of the symbols used in the tables throughout the Year Book will be found on p. vii of this volume.

Many significant developments took place in the health and welfare fields during 1969 and the first half of 1970. One of the most noteworthy was the completion of the reports of the Task Force on the Cost of Health Services in Canada. These reports contain almost 400 recommendations on methods to restrain the rate of increase in health service costs while maintaining and improving the quality of care, many of which will be implemented by the federal and provincial health departments.

* Except where otherwise indicated, this Chapter was prepared (August 1970) by the Research and Statistics Directorate of the Department of National Health and Welfare, Ottawa.

Since the July 1, 1968 inception of the federal Medical Care Insurance Program in which Saskatchewan and British Columbia were the original participating provinces, the provinces of Manitoba, Newfoundland, Nova Scotia, Alberta and Ontario had entered the plan by mid-1970 and the other three reported their intention of entering by the end of 1970.

Because of increasing concern over the detrimental effects of DDT on the environment and its potential hazard to health, the Food and Drug Directorate of the Department of National Health and Welfare restricted the use of this chemical, a move intended to reduce the residue level and improve the environment for fish and game as well as for humans. The use of cyclamates in beverages, dietetic desserts, pediatric drugs, and dietetic canned fruits is being phased out because of their possible carcinogenic properties. The use of cyclamates will be allowed only under close medical supervision.

The growing problem of environmental pollution has resulted in additional activities for the Department, such as the setting up of national standards for drinking water quality to assist provincial and municipal authorities in providing greater protection for drinking water supplies. A new Air Pollution Control Division is monitoring air pollution and will set standards for emission of pollutants.

Activity to reduce the smoking of tobacco products by Canadians continued. Information, advertisements and legislative proposals have been developed by the Department to make citizens aware of the dangers of smoking and to reduce the number of children taking up smoking. Publication of the tar and nicotine content of various brands of cigarettes was one of the most significant events to date. Legislative proposals introduced in 1968 regarding advertising and levels for tars and nicotine are still being considered.

As a result of a survey of radiation from colour television sets, legislation was prepared for the control of radiation from ill radiation-emitting appliances including television sets, lasers, microwave ovens and microwave dryers.

A four-year national survey of nutrition, unprecedented in its scope, is being conducted by the Department of National Health and Welfare. In clinics established in five regions across the country, medical technicians and interviewers will carry out physical examinations and record dietary habits.

The interim report of the Committee of Inquiry into the Non-medical Use of Drugs was tabled in the House of Commons. It recommends that research be continued into the social and pharmacological effects of marihuana and that adequate treatment facilities be provided for persons using drugs. The necessity of more information being disseminated was stressed, and it was suggested that young people play a major role in drug education. The report recommends that the use of marihuana be controlled through the Food and Drugs Act rather than the Narcotic Control Act, and that changes be made in the handling of convictions.

The Department of National Health and Welfare will begin a National Survey of Nutrition in September 1970, based on the experience of a trial survey previously undertaken in the Ontario town of Burlington. The objective of the survey is to provide basic information on the nutritional well-being of Canadians for the planning of public health programs and for the further development of the food and drug regulations. It will estimate the incidence of nutritional diseases and disorders in groups of the Canadian population, characterized by such factors as geographical location, type of community, income level, and the age and sex of individuals. It will also identify the types of foods and estimate the quantity normally ingested by individuals in order to determine the levels of ingestion of nutrients, food additives, non-nutritive substances and pesticide residues.

In 1969 the National Council of Welfare, an advisory body to the Minister of National Health and Welfare, was reconstituted as a citizens' advisory council, almost half of the membership of which is composed of representatives of low-income or disadvantaged minority-group organizations. A Division has been established within the Department to act as a secretariat for the Council and to provide a continuing liaison between it and these low-income groups. The Department of National Health and Welfare submitted a brief to the Committee on Poverty in February 1970, describing departmental policies against poverty and the role of the Department in providing care, or assisting in the provision of care, to the population as a whole and to groups in society.

Old age security pensions were again increased by 2 p.c., as the DBS consumer price index continued to rise. The monthly pension in 1970 was \$79.58 and, combined with the guaranteed income supplement, monthly payments to each pensioner entitled to the latter totalled \$111.41. On Jan. 1, 1970, benefits became available at age 65 compared to age 66 during 1969, completing the year-by-year progressive reduction of the age of pensioner from 70 to 65. Under the Canada and Quebec Pension Plans, benefits also became available to persons retiring at age 65 or over. These benefits were increased to a maximum of a little over \$43 a month; they become payable at their full rate in 1976. Survivors', dependants', and disability pensions were also increased. As of December 1969, about 170,000 persons were receiving benefits under these two Plans.

The Department of National Health and Welfare in mid-1970 was in process of preparing a White Paper on Social Security, to outline proposed programs for low-income and disadvantaged persons in Canada. The White Paper is expected to be released late in the year. (See Appendix III.)

PART I.—HEALTH

Provincial governments bear the major responsibility for health services in Canada, with the municipality often assuming considerable authority over matters delegated to it by provincial legislation. The Federal Government has jurisdiction over a number of health matters of a national character and provides important financial assistance to provincial health and hospital services. All levels of government are aided and supported by a network of voluntary agencies working in different health fields.

School children in an immunization clinic at Inuvik, N.W.T. Health measures carried out by the Department of National Health and Welfare across Canada include immunization against diphtheria, whooping cough, tetanus, poliomyelitis and measles as well as vaccination for smallpox and tuberculosis.

Section 1.—Federal Health Activities

The Department of National Health and Welfare is the chief federal agency in health matters but important treatment programs are also administered by the Departments of Veterans Affairs and National Defence. The Dominion Bureau of Statistics is responsible for collection, analysis and publication of national health statistics, the Medical Research Council and the Defence Research Board administer medical research programs, and the Canada Department of Agriculture has certain health responsibilities connected with food production.

The Department of National Health and Welfare has both a direct role in health activities and a supportive role to the provinces. Direct health care activities are concentrated mainly in the Medical Services Branch of the Department, which provides health services to Indians and Eskimos, operates quarantine and immigration medical services, administers the civil aviation medical program for the Ministry of Transport, and provides medical counselling and emergency medical service to federal civil servants. The Food and Drug Directorate is also actively involved in health care by maintaining surveillance over the manufacture, advertising, packaging and distribution of foods, drugs, cosmetics and medical devices, as well as by performing research in respect to standards for these items.

Advisory services, co-ordination of programs, and liaison activities with the provinces are provided by the Health Services Branch in the areas of child and maternal health, dental health, epidemiology, mental health, nutrition, health education, smoking and health, rehabilitation, and emergency health services. Standards are also set in this Branch for clinical laboratory services, biological products, levels for radiation, and envi-

ronmental pollution. Financial support to the provinces on a cost-sharing basis for hospital and medical insurance and health resources is provided by the Health Insurance and Resources Branch.

Co-ordination with the provinces on health matters is facilitated by the Dominion Council of Health, the principal advisory agency to the Minister of National Health and Welfare. Its membership includes the Deputy Minister of National Health, who acts as chairman, the chief health officer of each province, and five appointees of the Governor in Council. The Council meets semi-annually. Federal-provincial technical advisory committees of the Council deal with specific aspects of health.

Subsection 1.—Public Medical Care

The expression "medicare" is commonly used in referring to the federal Medical Care Insurance Program. This Program, established under the Medical Care Act, has permitted the Federal Government, since July 1, 1968, to contribute one half of the national cost of insured services to those provinces operating medical care insurance plans that meet certain minimum criteria. Two provinces—British Columbia and Saskatchewan—became participants in the federal plan at its inception. Manitoba, Nova Scotia and Newfoundland entered on Apr. 1, 1969, and Alberta and Ontario on July 1 and Oct. 1, respectively, of the same year. Specifically, the Federal Government contributes to any one participating province one half of the per capita cost of all insured services furnished under the plans of all participating provinces, multiplied by the number of insured persons in that one province. The minimum criteria that must be met are as follows.

- (1) *Comprehensive coverage* must be provided for all medically required services rendered by a physician or surgeon. There can be no dollar limit or exclusion except on the ground that the service was not medically required. The federal program includes not only those services that have been traditionally covered as benefits to a greater or lesser extent by the health insurance industry, but also preventive and curative services that have been traditionally covered through the public sector in each province; for example, the medical care of patients in mental and tuberculosis hospitals and those services of a preventive nature provided to individuals by physicians in public health agencies.
- (2) The plan must be *universally available* to all eligible residents on equal terms and conditions and cover at least 90 p.c. of the total eligible provincial population at the outset of the program and at least 95 p.c. after Apr. 1, 1971. This "uniform terms and conditions" clause is intended to ensure that all residents have access to coverage and to prevent discrimination in premiums on account of previous health, age, non-membership in a group, or other considerations. If a premium system of financing is selected, subsidization in whole or in part for low-income groups is permitted. It has been left to the individual province to determine whether its residents should be insured on a voluntary or compulsory basis. Utilization charges at the time of service are not precluded by the federal legislation if they do not impede, either by their amount or by the manner of their application, reasonable access to necessary medical care, particularly for low-income groups.
- (3) The plan must provide *portability* of benefit coverage when the insured resident who has paid his premiums, if any, is temporarily absent from the province and when moving residence to another participating province.
- (4) The provincial medical care insurance plan must be administered on a *non-profit basis by a public authority* that is accountable to the provincial government for its financial transactions. It is permissible for provinces to assign certain administrative functions to private agencies.

The above four criteria leave each province with substantial flexibility in determining the administrative arrangements for the operation of its medical care insurance plan and in choosing the way in which its plan will be financed, e.g., through premiums, sales tax, other provincial revenues, or by a combination of methods.

In addition to the comprehensive physicians' services that must be provided as insured benefits by participating provinces, the Medical Care Act empowers the Federal Government to include any additional health services under terms and conditions specified by the Governor in Council. So far, such additional services are limited to certain procedures carried out by dental surgeons in a hospital setting.

Provincial programs that provide health care services (apart from those already insured under the Medical Care Act) for welfare recipients establishing eligibility on the basis of financial need are supported financially by the federal program known as the Canada Assistance Plan. This program (p. 383) provides for federal payment of one half of the cost of personal health care services, as well as welfare services. The provinces are free to make available a wide range of health care benefits.

Subsection 2.—Health Resources Program

The Health Resources Program is concerned with manpower in the health fields necessary for the provision of comprehensive health services to Canadians. Under the program the Federal Government provides capital grants for teaching and research establishments, undertakes studies on health manpower, and offers advice and consultation.

The capital-grant aspect of the program was inaugurated when in July 1966 Parliament passed the Health Resources Fund Act, which was established to develop resources for the training of personnel in order to reduce shortages and to meet the increase in demand likely to follow the introduction of medical care insurance. The Act established a fund of \$500,000,000, available over the period 1966-80. Out of this fund the Government will pay up to 50 p.c. of the cost of planning, construction, purchase, renovation and basic equipment of teaching hospitals, medical schools, training facilities for nurses and other health professionals, and research establishments; the costs of land, interest and residential buildings are excluded. Of the \$500,000,000, \$300,000,000 is available to the provinces in proportion to their populations and \$25,000,000 is available to the Atlantic Provinces for joint projects in which all four provinces participate; the remaining \$175,000,000 is yet to be allocated. By Mar. 31, 1970, the Government had approved contributions of \$160,000,000 and paid out \$106,000,000—about two thirds for training facilities and one third for research establishments.

The Department provides technical and professional advice and consults with officials of provincial governments and other agencies concerned with the development of health resources in Canada, and supports programs to increase the effectiveness of health manpower. These activities are undertaken to ensure the economical and efficient use of the Health Resources Fund.

Subsection 3.—National Health Grant Program

The National Health Grant Program was instituted in 1948 to assist the provinces in extending and improving public health and hospital services. As provincial needs altered, changes were made in the amounts and conditions of individual grants. Table 1 shows the utilization of the General Health Grants and Hospital Construction Grants and changes in their classification since inception, and the current grants, as follows: Professional Training, Hospital Construction, Mental Health, Tuberculosis Control, Public Health Research, General Public Health, Cancer Control, Medical Rehabilitation and Crippled Children, and Child and Maternal Health. During the period 1948-70, the total expenditures under this program were \$900,000,000.

The largest single grant has been in support of hospital construction. This grant was terminated on Mar. 31, 1970, and lump sum cash payments were made to the provinces and territories in discharge of the full entitlement of each province and territory to the termination date of the grant. During the life of this grant, funds were approved to assist with the construction of space to house more than 130,200 beds and 16,000 bassinets, for more than 24 300 beds for nurses, 971 beds for interns and about 8,315,000 sq. feet of floor area for certain services used by both in-patients and out-patients. The second largest grant, the General Public Health Grant, has assisted the provinces in extending local health services for the prevention of disease and disability, in controlling environmental health hazards, and in developing a great variety of health services. Since 1948

more than 53,700 health personnel have received assistance in taking training in the health disciplines. Other grants are designated for preventive and treatment services in specific areas, such as mental health, tuberculosis and cancer, maternal and child care, and medical rehabilitation.

Projects supported by the Public Health Research Grant relate to the prevention of disease, disability or death; epidemiology; community health and medical care; operational research; environmental health, including sanitation; and the utilization of health manpower.

In April 1969, a new National Health Grant was established to stimulate research studies, service demonstrations and training activities of national importance for the improvement of health services. Eligible applicants may be official or voluntary health agencies, universities, or other qualified agencies or individuals. In 1969-70, the amount allocated was \$1,062,000 on the basis of five cents per capita of population; in 1970-71, it was increased to \$2,300,000 on the basis of 10 cents per capita. Unlike its predecessor, which was a joint federal-provincial program, the National Health Grant is federally administered.

The Government has indicated its intention of terminating the General Health Grants, except for the Professional Training and Public Health Research grants, by the end of March 1972. The amounts available to the provinces are being gradually reduced, the first reduction having taken place in 1969-70 and the second in 1970-71.

1.—Amounts Allocated and Amounts and Percentages Expended under the General Health Grants and Hospital Construction Grants, by Grant, for the Period Ended Mar. 31, 1969, and for the Year Ended Mar. 31, 1970.

Grant	May 14, 1948—Mar. 31, 1969			Year Ended Mar. 31, 1970

Totals.....	1,008,220,737	826,219,370	81	51,267,610	74,166,429

¹ As set out in the Orders in Council authorizing the General Health Grants and Hospital Construction Grants for the years cited. Provinces may vary the amounts allocated for individual General Health Grants by transfer of unexpended funds from one Grant to another. ² Total expenditures for each Grant for all provinces including Quebec's share, which has been paid through tax rebate under the Established Programs (Interim Arrangements) Act, effective 1965-66.

³ Because of grant transfer of funds between grants, expenditures can exceed amounts allocated. ⁴ Merged with the Medical Rehabilitation Grant, Apr. 1, 1960. ⁵ The amounts allocated exclude, whereas the amounts expended for 1969-70 include, re-votes for unclaimed allocations as from Apr. 1, 1953.

⁶ Absorbed into the General Public Health Grant, Apr. 1, 1960. ⁷ Lapsed in 1953 following the completion of provincial health surveys. ⁸ Introduced in 1953 and absorbed into the General Public Health Grant, Apr. 1, 1960. ⁹ Introduced in 1953 and merged with the Crippled Children Grant, Apr. 1, 1960. ¹⁰ From 1960 only; see footnotes ⁴ and ⁵. ¹¹ Introduced in 1953.

Subsection 4.—Hospital Insurance

Provincial hospital insurance programs, operating in all provinces and territories since 1961, cover 99 p.c. of the population of Canada. Under the Hospital Insurance and Diagnostic Services Act of 1957, the Federal Government shares with the provinces the cost of providing specified hospital services to patients insured by these programs. Specifically excluded are tuberculosis hospitals and sanatoria, hospitals or institutions for the mentally ill, and institutions providing custodial care, such as nursing homes and homes for the aged. The methods of administering and financing the program in each province and the provision of services above the stipulated minimum required by the Act are left to the choice of the province.

Insured in-patient services must include accommodation, meals, necessary nursing service, diagnostic procedures, pharmaceuticals, the use of operating rooms, case rooms, anaesthetic facilities, and the use of radiotherapy and physiotherapy if available. Similar out-patient services may be included in provincial plans and authorized for contribution under the Act. All provinces include some out-patient services. The provincial plans are administered by the provincial department of health in some provinces and by a separate commission in others. To finance the plans, the provinces use general revenue, sales taxes and premiums in various combinations.* The Federal Government contributes, out of the consolidated revenue fund in respect to each province, 25 p.c. of the per capita cost of in-patient services in Canada and 25 p.c. of the per capita cost of in-patient services in the province, multiplied by the average number of insured persons in that province. Thus, the total contribution is about 50 p.c. of the shareable cost for all Canada, but the proportion is higher for provinces where the per capita cost is below average and lower for the other provinces. Contributions for insured out-patient services with respect to each province are paid in the same proportion as the contributions to the cost for in-patients.

For 1969, the Federal Government made the following advance payments, totalling \$601,640,060: Newfoundland \$19,708,098, Prince Edward Island \$3,878,884, Nova Scotia \$30,413,984, New Brunswick \$23,793,308, Ontario \$304,638,023, Manitoba \$38,767,364, Saskatchewan \$37,369,056, Alberta \$64,928,312, British Columbia \$76,328,079, Yukon Territory \$553,411, and the Northwest Territories \$1,261,541.†

Tables 2 and 3 show data for the hospitals listed in hospital insurance agreements for 1968. The 1,279 hospitals had a total of 143,679 beds set up at the end of the year, or 6.9 beds per 1,000 population. The rate of patient-days per 1,000 population was 2,039 for Canada and ranged from 1,582 in the Yukon Territory to 2,490 in Alberta.

* Newfoundland, Prince Edward Island, New Brunswick, Quebec and Yukon Territory use general revenue only. Nova Scotia uses general revenue and sales tax. Ontario and Manitoba use general revenue and premiums. Saskatchewan uses general revenue, premiums and a daily service charge. Alberta uses general revenue, premiums and a service registration charge. British Columbia and the Northwest Territories use general revenue and a daily service charge.

† On Jan. 1, 1965, contributions to Quebec under the Hospital Insurance and Diagnostic Services Act were discontinued and replaced by arrangements under the Established Programs (Interim Arrangements) Act.

2.—Number of Beds in Hospitals Listed in Hospital Insurance Agreements, with Rates per 1,000 Population, by Province, as at Dec. 31, 1968

Canada.....	1,279	42,286,895	2,038.5	39,233,729	1,918

¹ Per 1,000 population; based on population estimates as at June 1, 1968.

² Per 1,000 persons insured under provincial plans.

Table 4 shows the expenditures of budget review hospitals. They exclude capital costs, but include expenditures for services not covered by hospital insurance plans. The expenditures increased in 1968 by 16 p.c. over the preceding year to \$1,722,497,386, of which salaries accounted for two thirds.

Provincial per capita expenditures shown in the table are influenced by the percentage of services provided by budget review hospitals (over 90 per cent nationally but varying provincially) as well as by differences in hospital utilization, particularly in the amount of care provided for chronic patients.

³ Excludes newborn.

Subsection 5.—Food and Drug Control

The provisions of the Food and Drugs Act, administered by the Food and Drug Directorate of the Department of National Health and Welfare, apply to the manufacture, advertising, packaging and distribution of foods, drugs, cosmetics and medical devices anywhere in Canada. Powers are given under this legislation to maintain the safety, purity and quality of food and drug products and to prevent misrepresentation in labelling and advertising. The Act specifically prohibits the advertising of any food, drug, cosmetic or medical device as a preventive or cure for a number of serious diseases. This feature of the Act is thought to be unique to Canada and it has proven valuable in the prevention of fraud.

Standards of safety and purity are developed through laboratory research and maintained by means of a regular and widespread inspection. The inspection of food-manufacturing establishments plays a major role in the production of clean, wholesome foods containing ingredients that meet recognized standards. The Food and Drug Regulations list chemical additives that may be used in foods, the amounts that may be added to each food, and the underlying reason. Information on new additives must be submitted for careful review before they are included in the permitted list. Considerable emphasis is placed upon studies to ensure that the levels of pesticide residues in foods do not constitute a health hazard. The effect of new packaging and processing techniques on the bacteria associated with food spoilage is also of special concern.

Both the manufacture and distribution of drugs in Canada are regulated by the Food and Drug Directorate. The conditions under which drugs are to be manufactured are described in the Manufacturing Facilities and Control Regulations. They relate to facilities, employment of qualified personnel, quality control procedures, maintenance of records, and a suitable system to enable a complete and rapid recall of any batch of drugs from the market. Pharmaceutical plants are regularly visited by inspectors to ensure that the drugs produced are of a suitable quality to be sold in Canada. Control over the distribution of drugs is based on the relative safety of a drug and its potential for abuse. Accordingly, there are different levels of control. Since 1966, every manufacturer and distributor of drugs in Canada has been required to submit to the Directorate information on all the products he is marketing in Canada. From this and other information, decisions are made regarding the types of control procedure that will be implemented.

A limited number of drugs in specified dosage ranges may be sold through any outlet under the Patent and Proprietary Medicines Act. Registration under this Act allows a manufacturer to sell secret formula preparations and make limited claims for the product. Most drug products, however, are limited to sale on prescription and are usually dispensed to patients through a pharmacy. Narcotics and controlled drugs are closely regulated and detailed records kept of all transactions involved in the legitimate use of these products. The illicit market in narcotics and similar products is the responsibility of the Royal Canadian Mounted Police and other law-enforcement agencies. Close co-operation is maintained between these agencies and the Food and Drug Directorate.

When new drugs with unknown properties are to be placed on the market, detailed information is demanded of the manufacturer. This information includes data on adverse side effects, the manufacturing process to be used, the results of the drug in clinical tests, and the formulation of the dosage forms. The data are carefully reviewed by the Directorate to ensure that the drug is safe and that it is effective for the purpose claimed. Even after the drug is marketed the Directorate maintains a close watch over the side effects encountered in practice. If it proves to be relatively safe and effective it is no longer classed as a new drug, but if it appears that it might be unsafe the manufacturer would be asked to remove it from the market. The Directorate conducts an adverse-drug-reaction reporting program across Canada to recognize and investigate reactions to drugs. The co-operation of the medical, dental, veterinary and pharmaceutical professions is also solicited in advising the Directorate of such reactions in private practice.

Subsection 6.—Medical Services

Through its Medical Services Branch, the Department of National Health and Welfare provides several direct and indirect types of medical service, as described in the following paragraphs. "Indirect" services are provided by hiring local services where practicable.

Indians and Eskimos.—Medical and public health services are made available to registered Indians and Eskimos who are not included under provincial arrangements and who are unable to provide for themselves. Much of the service in treatment and health education is rendered to the patients through 46 departmental out-patient clinics and 91 health centres staffed by medical and other public health personnel. In remote areas, the key facility is frequently the departmental nursing station, a combined emergency treatment and public health unit usually having two to four beds under the direction of one or two nurses; 57 of these are operated throughout Canada.

Where practicable, there has been considerable integration of Indians in provincial and municipal health agencies, so that the number of hospitals and other facilities provided specifically for them have been reduced accordingly. In 1970, the Department maintained 13 hospitals at strategic points and co-operated elsewhere with community, mission or company hospitals. Indians are included under all provincial prepaid insurance plans for hospital care and other forms of medical care. Indian and Eskimo health workers are trained to give instruction in health care and sanitation.

Northern Health.—Because of the special problems in developing health services in the Far North, the Department has been given the responsibility of co-ordinating federal and territorial health care for all residents. In so doing, it undertakes the functions of a health department for the Council of the Northwest Territories and assists the Government of the Yukon Territory in the provision of certain health services. Hospital insurance plans are in effect in both territories.

In the Yukon, services for the total population, administered through the Commissioner for the Yukon and provided on a cost-sharing basis with the Department of National Health and Welfare, include complete treatment for tuberculosis, payment for services rendered at Alberta cancer clinics, mental hospital care through arrangements with the Province of British Columbia, and medical care for indigent patients. Public health nursing services, measures for the control of communicable diseases, and administration of the principal public hospital are primarily the responsibility of the Department.

Similar services are provided in the Northwest Territories with costs shared between the territorial government and the federal Departments of National Health and Welfare and of Indian Affairs and Northern Development.

Other Medical Services.—As of mid-1970, compulsorily prepaid medical, surgical, hospital and other treatment services are provided for crew members of all foreign-going ships arriving in Canada and Canadian coastal vessels in interprovincial trade, and medical, surgical and other treatment prepaid on an elective basis is available to crew members of Canadian fishing vessels. (Canadian seamen obtain their hospital care under the provincial hospital insurance plans.) A medical service is also provided for the Canadian Coast Guard.

All vessels, aircraft and other conveyances and their crews and passengers arriving in Canada from foreign countries are inspected by quarantine officers to detect and correct conditions that could lead to the entry into Canada of such diseases as smallpox, cholera, plague, yellow fever, typhus and relapsing fever. Fully organized quarantine stations are located at all major seaports and airports.

The Immigration Medical Service conducts in Canada and other countries the medical examination of all applicants for immigration to Canada and provides treatment for certain classes of persons after arrival in Canada, including immigrants who become ill en route to their destination or while seeking employment.

Health counselling is offered through Medical Services Branch units to federal employees throughout the country. This service is primarily diagnostic and advisory only but emergency treatment may also be given.

Air pilots and other air personnel are routinely examined by the Civil Aviation Medical Assessment Service for physical and mental fitness for the performance of their duties.

The Department is responsible for enforcing hygienic standards on federal property, including ports and terminals, on interprovincial means of transport and on ships and aircraft.

Subsection 7.—Medical Research

Federal Government expenditures for health sciences research are estimated at \$58,500,000 for 1969-70, a substantial increase over the expenditure of \$44,700,000 in 1967-68 and \$53,500,000 in 1968-69. Of the total 1969-70 amount, the Medical Research Council expended \$30,891,000, the Department of National Health and Welfare \$27,100,000, the Department of Veterans Affairs \$457,000 and the National Research Council the remainder.

The Department of National Health and Welfare accounted for most of the Federal Government intramural expenditures on research and development. An amount of \$8,800,000 was so spent in 1969-70 in such fields as environmental health, pharmacology, nutrition, microbiology, pesticides, food additives, clinical laboratory procedures, radiation protection, prosthetics, epidemiology, and physical fitness. The Department of Veterans Affairs intramural expenditure was in support of a variety of clinical studies in chronic disease problems including psychiatric research, and the National Research Council conducts studies in radiation biology and other life sciences important to health.

In 1969-70, \$4,400,000 was distributed under the Public Health Research Grant for applied and developmental research projects conducted by universities, hospitals, health departments and other non-profit health organizations; \$1,062,000 under the newly established National Health Grant; \$143,000 for physiological research under the Fitness and Amateur Sport Grant; and \$61,000 for smoking and health research. It is estimated that \$13,000,000 or 40 p.c. of the Health Resources Fund expenditures in 1969-70 was used to build research facilities as an integral part of the program to expand the training of health personnel at medical and dental schools and affiliated centres.

Among the voluntary agencies supporting medical research in Canada related to their special interests, the National Cancer Institute and the Canadian Arthritis and Rheumatism Society are the most active. The Interdepartmental Committee on Medical Research provides a forum for the sharing of information and support of medical research to which the voluntary agencies are invited.

The Medical Research Council.*—The Medical Research Council is the main channel through which the Federal Government provides financial support for research in the health sciences initiated and carried out in Canadian schools of medicine, pharmacy and dentistry. The first step toward a formal mechanism for the support of extramural research in the medical sciences was the establishment in 1938 of the Associate Committee for Medical Research of the National Research Council with a budget of \$53,000 to be used for grants-in-aid of university research and fellowships for young doctors seeking training in research. In 1947 this Committee was superseded by a Division of Medical Research of the National Research Council, assisted by an Advisory Committee on Medical Research comprised of 11 senior investigators drawn from Canadian medical schools. In 1960, on the recommendation of a special committee set up to review extramural medical research support by the Federal Government, the Division of Medical Research was replaced by the Medical Research Council, which continued to operate within the administrative framework of the NRC but was responsible for policies affecting its own program. In 1969, with the

* Prepared by Dorothy J. Wright, Medical Research Council, Ottawa.

passage of the Government Organization Act, the Medical Research Council became a fully independent agency of the Federal Government, with a major responsibility for the support of extramural research not only in the medical sciences but also in the pharmaceutical and dental sciences. Throughout this entire period, funds have been made available for grants-in-aid and postdoctorate training fellowships and, latterly, salary support has been given for a limited number of highly qualified career investigators in the universities and for the pre-doctoral training of graduate students in the health sciences. Other types of research support have been evolved to encourage the development of health sciences research. The budget provided by Parliament for the Council's program in 1969-70 was \$30,891,000, and an additional \$380,000 for administration of the program.

The Medical Research Council (MRC) is a departmental Crown corporation (see p. 159) reporting to Parliament through the Minister of National Health and Welfare but completely separate from that Department. The Council is comprised of a full-time President appointed by the Governor in Council, and 21 other members drawn from the universities who serve without remuneration for terms of up to three years. The program is administered by a full-time secretariat of 18 scientific and administrative personnel. Under the terms of its legislation, MRC has authority "to promote, assist and undertake research in the health sciences, with the exception of public health research" (which, by statute, is the responsibility of the Department of National Health and Welfare). Its program is divided into three main sectors: the Grants Program, Personnel Support Programs, and Research Development.

The Grants Program is by far the largest component of the MRC's operation. Applications from investigators on the staff of Canadian universities and affiliated institutions are considered routinely three times a year. The basis for this consideration is peer assessment; each application is reviewed by external referees expert in the field involved and then considered by one of 15 grants committees, each comprised of eight to ten senior investigators drawn from universities, government and industry. The recommendations of these committees are then forwarded to MRC and awards are approved to the extent that funds permit. Most are made on an annual basis but, where a research program of high merit has reached a stable level of expenditure, support of a specified amount may be provided for terms of three to five years. The grants are designed to provide for the normal operating costs of approved programs and for items of special research equipment.

The Personnel Support Programs provide opportunities for research training of graduates of high calibre at the postdoctoral level through Fellowship and Centennial Fellowship programs and, more recently, for training at the pre-doctoral level through a program of Studentships. These awards are all prize awards and the number of successful candidates is therefore limited. Many other research trainees, however, receive support through operating grants to the investigators who act as their supervisors. The MRC's Associate-ship Program, which was started in 1956, has had considerable impact on the development of the research effort in Canadian medical schools; it provides continuing salary support for a limited number of highly qualified independent researchers working in universities and devoting at least 75 p.c. of their time to research and graduate teaching. A more recent category of support, the Medical Research Council Scholarship, provides young investigators who have completed their formal research training with an opportunity to demonstrate in a university setting their potential for independent research without the necessity of, at the same time, carrying a heavy undergraduate teaching load. These awards are limited to five years. Provision is also made for the exchange of information among Canadian scientists through the Visiting Professorship Program, and among Canadian scientists and their foreign colleagues by means of the Visiting Scientist Program under which Canadian investigators may spend up to one research year abroad or foreign scientists may spend periods of three to twelve months working in Canadian laboratories.

Under the heading of Research Development, MRC provides financial support for scientific symposia and workshops held in Canada, and assists in defraying the cost of Canadian delegates' attendance at certain international congresses. A significant portion

Investigations of decompression sickness, gas gangrene and other diseases where a concentration of oxygen under high pressure is required are conducted in the Hyperbaric Chamber at the Toronto General Hospital.

of MRC's developmental funds is used to overcome disparities, both regional and disciplinary, in Canada's research effort; universities attempting to build up programs in under-developed fields are encouraged to apply for Negotiated Development Grants which are designed to assist local authorities in the recruitment of new staff by giving assurance of research funds and equipment for periods of up to two years. A Group Program permits two or more senior investigators of high calibre to concentrate their efforts on a specific field. MRC supports a Group working in the Neurological Sciences at the Université de Montréal, members of which have been freed by the university from administrative and undergraduate teaching duties; MRC, in turn, provides funds for the salaries of the full-time members of the Group and their supporting personnel, for the operating costs of the research and for major equipment.

MRC has taken the initiative in sponsoring clinical trials carried out on a national collaborative basis; the first is the Therapeutic Trial of Human Growth Hormone in the treatment of certain types of dwarfism and the second, a study on the efficacy of anti-lymphocyte serum in preventing rejection of renal transplants.

In addition to its responsibilities in the direct support of extramural research, the Medical Research Council is involved in the integration of health science research with other aspects of the Federal Government's activities in the health field. To co-ordinate federal research efforts, the President of the Medical Research Council is an associate member of the National Research Council, a member of relevant committees of the Defence Research Board and of the Department of Veterans Affairs and participates in meetings of the Health Research Committee of the Department of National Health and Welfare. The Deputy

Minister of National Health and the Vice-President (Scientific) of the National Research Council are also associate members of the Medical Research Council. In addition, members of Council and of its secretariat serve on committees of a number of the voluntary agencies which support research in the health sciences and a continual exchange of information as to policies and procedures is achieved in this way. The Medical Research Council welcomes consultation with the universities and industry and, where advisable, is prepared to set up study groups for the consideration of problems that have a bearing on the nation's health.

Subsection 8.—International Health

Canada actively assists and co-operates with the World Health Organization (WHO) and the other specialized agencies of the United Nations whose programs have a substantial health component or orientation. Canada's candidacy for re-election to the WHO Executive Board was successful by almost unanimous support at the 21st World Health Assembly. Capital and technical assistance are provided to developing countries through the Colombo Plan and other bilateral aid programs. Health training is provided for a number of persons coming to Canada each year under the various technical co-operation schemes (see pp. 201-205); during 1969, there were 313 trainees in Canada studying in a wide range of health disciplines under the Canadian International Development Agency program but with greatest concentration in undergraduate medicine and in public health.

Canadian experts in health legislation, health administration, nursing and related areas undertook specific assignments abroad during the year and teachers and specialists in a number of clinical fields were provided in response to requests from the developing countries. Capital assistance, primarily through the provision of Cobalt-60 beam therapy units for cancer treatment centres in the Colombo Plan area, was continued. As a result of their visit to Viet-Nam in 1967, the Advisory Team on the Viet-Nam Medical Program recommendations regarding tuberculosis, rehabilitation, immunization, hospital equipment and other programs have been implemented.

To carry out Canada's obligations under the International Sanitary Conventions, the Department of National Health and Welfare maintains quarantine measures for ships and aircraft entering Canadian ports and provides accommodation and medical care for persons arriving in Canada who require quarantine (see p. 339).

The Department is responsible for the enforcement of regulations governing the handling and shipping of shellfish under the International Shellfish Agreement between Canada and the United States and, at the request of the International Joint Commission, participates in studies connected with control of pollution of boundary waters between Canada and the United States as well as with problems caused by air pollution. Other responsibilities include the custody and distribution of biological, vitamin and hormone standards for WHO and certain duties in connection with the Single Convention on Narcotic Drugs, 1961, as well as Canada's representation on the Narcotic Commission of the United Nations.

Subsection 9.—Consultative and Technical Services

The Department of National Health and Welfare extends consultative and technical services to the provinces over a broad range of health activities. The consultant divisions of the Health Services Branch are concerned with: epidemiology including disease surveillance; communicable disease control as exemplified by the Canadian Communicable Disease Centre that serves as the national reference laboratory for diagnosis of bacterial and viral diseases; child and adult health including mental health, dental health and nutrition; and rehabilitation, emergency health and environmental health problems described elsewhere. The Department also provides technical advisory services to the provinces through its Health Insurance and Resources Branch, Research and Statistics Directorate and Health and Information Division.

Section 2.—Provincial and Local Health Services

Provincial governments are primarily responsible for health measures to prevent disease and improve the health standards of the community. These comprise preventive health services, hospital services, mental health services, treatment services for tuberculosis and other diseases, and special treatment services and care of the chronically ill and disabled. They are usually administered by the provincial health department or other official agency in co-operation with the hospitals and voluntary health organizations, the health professions and the teaching and research institutions.

Although the pattern of services is similar, provincial health organization, financing and administration vary to some degree. Most health functions are exercised by the provincial health departments but in some provinces certain programs, such as hospital insurance, medical care insurance, tuberculosis control, cancer control or alcoholism programs, are administered by separate public agencies directly accountable to the minister of health. Voluntary organizations also provide specialized health services, often with some support from tax funds in the form of payment for services or support grants.

In general, the provincial health departments carry out over-all planning and direction of public health programs, administer certain specialized health programs, and assist through technical and financial aid the regional or local health units and city health departments that have been delegated responsibility for the basic public health services. In most provinces, the health unit systems, which serve mainly rural areas, are operated either by the province or jointly by the province and the local authority, with the local authority having jurisdiction over county, municipality or region, while city health departments are administered by municipal or metropolitan boards of health. Several provincial health departments also directly administer health services to northern unorganized territories. The nucleus staff of a local health unit or department usually is composed of a full-time medical officer of health, a number of public health nurses and a public health inspector.

Local official programs to safeguard community health are concerned with environmental sanitation to ensure safe water, milk and other foods; prevention and control of infectious diseases through use of vaccines and prophylactics; improvement of maternal and child health and dental health; registration of vital statistics; and health education and counselling. In addition, the larger city health departments have developed specialized services in such areas as mental health, home care, and rehabilitation of the chronically ill and the handicapped. A few health units and departments in most provinces have started health screening for chronic conditions and family planning clinics. The city health departments participate to some degree with the provincial authorities in accident prevention and in measures to control air, water and soil pollution.

Provincial health departments support the local programs by grants-in-aid and consultant services. Most mental and tuberculosis hospitals and clinics are provincially operated, as are treatment services for the venereal diseases, cancer, alcoholism and other specific diseases, and the laboratories that aid both the public health agencies and practising physicians in diagnostic and control procedures. The provincial agencies are primarily responsible for the collection and analysis of vital statistics and the study of the epidemiological and related social and economic conditions that affect health. They also give leadership in such fields as occupational health, nutrition, health education and pollution problems in collaboration with national health agencies. In order to maintain and improve health services, the provincial health departments recruit and train professional and technical personnel for the health fields and support public health research.

Subsection 1.—Public Health Services

Environmental Health.—Environment is the sum of all social, biological, physical and chemical factors that make up man's surroundings, and deterioration and modification of the quality of that environment has emphasized the need for assessing the health implications and for developing and stimulating the use of methods to control or eliminate harmful factors.

As technological advances continue, there is an ever-increasing injection of man-made products into the air, water and soil environment, usually as waste or by-products and often at low concentrations, and many of these pollutants are known to affect health. The relationship between deleterious pollutants and their effects on health depends on such factors as their concentration and the duration of exposure. Of particular importance are the possibility of some or total recovery between periods of exposure, the variability in susceptibility to disease from individual to individual, and effects associated with simultaneous or superimposed exposure to two or more pollutants. The considerable evidence of potential long-term serious consequences of environmental pollution on health justifies the present concern and the need for increased activity.

Programs to protect workers in their occupational environments have been carried on by occupational health officials for a number of years but it is only recently that health officials have been directing their attention to health hazards in the general environment. For example, although there is a long history of activities concerned with the health effects of noise in the industrial and agricultural environment, attention is now being focused also on the health effects of community noise.

The various agencies in Canada concerned about environmental health are in process of developing and implementing programs to assess and control air and water pollution, radiation, industrial toxicants, and other factors of the general, occupational and home

A Department of National Health and Welfare technician takes measurements following the use of radioactive isotopes to test the sources of pollution of a popular bathing beach.

environments known to be, or suspected of being, deleterious to human health. The complexity of their task requires the work of specialists in a variety of disciplines falling within the broad spectrum of physical, life and engineering sciences and the co-operative efforts of governments and other agencies. Individual tasks include field surveys and interpretation of air and water pollution, research into health effects and their causes from all kinds of toxicants, development of guides and standards for pollutants such as chemicals and other hazards in both the working and general environment, and the specifying of health and safety standards for radiation-emitting devices.

The Federal Government discharges its responsibilities in environmental health through the Environmental Health Directorate of the Department of National Health and Welfare, which is composed of four Divisions—Occupational Health, Public Health Engineering, Radiation Protection, and Air Pollution Control (the latter created in late 1969). Each of the ten provinces has agencies to deal with the problems of water supply, sewerage systems and water pollution; six provinces have agencies to handle air pollution problems and agencies to deal with occupational health; and one province is in process of establishing an occupational health unit. Co-ordination of the many activities within provinces and between the provinces and the Federal Government is usually provided by advisory boards or committees.

Occupational Health.—Services designed to prevent accidents and occupational diseases and to maintain the health of employees are the common concern of provincial health departments, labour departments, workmen's compensation boards and industrial management. Provincial agencies regulate working conditions and offer consultant and educational services to industry. All provinces have legislation (Factory Acts, Shop Acts, Mines Acts, Workmen's Compensation Acts) setting standards for health safety and accident prevention on the job. Most provinces maintain environmental health laboratories that study industrial health problems such as the effects of noise and air conditions on workers.

Communicable Disease Control.—The larger provincial health departments have separate divisions of communicable disease control headed by full-time epidemiologists whereas in the smaller provinces this function is combined with one or more community health services. Local health authorities organize public immunization clinics against diphtheria, tetanus, poliomyelitis, whooping cough, smallpox and measles. They also engage in case-finding and diagnostic services in co-operation with public health laboratories and private physicians. Special services for tuberculosis and venereal diseases are noted on pp. 348 and 349.

Health Education.—Most provincial health departments have a division or unit of health education directed by a full-time professional "health educator" to promote public knowledge of health needs and measures. This division or unit provides education materials to other divisions of the health department, to local health authorities, to voluntary associations, and to individuals. Many educational activities are directed to accident prevention and to reducing habits harmful to health, such as cigarette smoking and the excessive use of alcohol and drugs. All health workers carry out health education as part of their normal activities.

Public Health Laboratories.—All provinces maintain a central public health laboratory and most have branch laboratories to assist local health agencies and the medical profession in the protection of community health and the control of infectious diseases. Public health bacteriology (testing of milk, water and food), diagnostic bacteriology and pathology are the principal functions of the laboratory service, with medical testing for physicians and hospitals steadily increasing in volume.

Maternal and Child Health.—Public health nurses employed by the local health services carry out preventive health services to mothers, newborns and children through

clinics, home and hospital visits and school health services. All provincial health departments have established maternal and child health consultant services that co-operate with the public health nursing services. The maternal and child health divisions established in five provinces also undertake studies in maternal and child care, including hospital care, and assist in the training of nursing personnel.

Nutrition.—Provincial health departments and some city health departments employ consultants in nutrition to extend technical guidance and education to health and welfare agencies, nursing homes and other care institutions and hospitals. They provide diet counselling to selected patient groups and conduct nutritional surveys and other research.

Dental Health.—Provincial dental public health programs have been largely preventive but increasing emphasis is now being given to dental care. Dental clinics conducted by local health services are usually restricted to pre-school and younger school-age groups. A number of provinces send dental teams to remote areas and subsidize resident dentists to practise in areas lacking such services; the four western provinces have dental care schemes of varying coverage for welfare recipients. Other dental health programs are directed to the training of dentists and dental hygienists, the conduct of dental surveys and the extension of water fluoridation.

Subsection 2.—Mental Health Services

Mental health services in Canada are organized as part of provincial health services. Each province employs a director of mental health services, usually a psychiatrist, and one or more consultants in psychiatric nursing, clinical psychology, social work, occupational therapy or special education and also one or more psychiatrists specializing in paediatrics, geriatrics, mental retardation, alcoholism and drug addiction, or other related fields. As public health officers, the mental health directors are responsible for the development of programs aimed at prevention of mental disease and for the general promotion of mental health, on their own and in co-operation with welfare, education, manpower, labour, and justice departments. As psychiatrists, they are responsible for development and supervision of the various health facilities for the treatment of people who suffer from mental or emotional disorders including disorders of character and behaviour, the mentally retarded, people with damage to the nervous system, alcoholics and drug addicts.

Mental health services differ in detail and stage of development from province to province; all are being extended and improved to take advantage of the best methods of treatment and prevention. The traditional pattern of long-term care of the mentally ill and retarded in large isolated mental hospitals and in hospitals for mental defectives is giving way to new patterns of care designed to cure the afflicted or, failing that, to provide for them living and working environments that will enable them to lead reasonably normal lives.

The mental hospitals now place less emphasis on custodial care and more on intensive psychiatric treatment. They admit voluntary patients who receive much the same care and treatment as they would receive as patients in a general hospital. Many of those who would not profit from intensive psychiatric treatment—the severely retarded and people with severe mental deterioration—are supported under welfare auspices in sheltered workshops, nursing homes or foster homes and continue to receive medical care. In addition to the mental hospitals, some special "psychiatric" hospitals provide intensive psychiatric care over short periods, and psychiatric units and out-patient psychiatric departments are being established in large general hospitals. Local authorities or provincial health departments operate mental health clinics in most large cities and travelling clinics visit suburban and rural areas. Psychiatric hospitals and mental health clinics are establishing more day-care and night-care facilities through which some patients receive

part-time hospital care and therapy during the day and go home at night and others go to work during the day and return to hospital in the evening for treatment.

Extending mental health services into the community aims at preventing severe mental and emotional breakdowns and at reducing the number of people requiring treatment in institutions. Under the terms of the federal-provincial medical care legislation, in effect in seven provinces as of Mar. 31, 1970, the services of private psychiatrists should become more widely available. Through early diagnosis and treatment in a mental health clinic or out-patient department of the hospital in the patient's neighbourhood, he may continue to live at home and pursue his normal occupation while receiving treatment.

Special centres have been established for the study and treatment of alcoholism and drug addiction, criminal psychopathy, psychiatric disorders in children, brain injuries and other neurological disorders. Studies recently instigated by the Federal Government in these and related areas include a survey of residential and in-patient services for emotionally disturbed children and the appointment of the Commission of Inquiry into the Non-medical Use of Drugs. The interim report of its findings and recommendations was tabled in the House of Commons on June 19, 1970; the principal recommendations are mentioned in the introduction to this Chapter. In addition, the provinces are amending the pertinent legislation in order to guarantee the rights of the mentally ill, the emotionally disturbed and the intellectually retarded.

The continuing efforts by provincial health departments to provide more and better mental health services reflect growing enlightenment about mental health on the part of the medical profession, the general public and government agencies. Improvement in the care of psychiatric patients has been fostered by activities of voluntary organizations such as the Canadian Mental Health Association and the Canadian Association for the Mentally Retarded; by the professional advice of the Canadian Medical Association and the Canadian Psychiatric Association; by the national health grants and the national welfare grants for new services, professional training, and scientific research; and through the information programs of the Mental Health Division of the Department of National Health and Welfare.

In the field of mental retardation, the Federal Government instituted a Mental Retardation Grant in 1967-68 to support health and welfare demonstration and research projects conducted by voluntary agencies for the mentally retarded. The amount allocated to this grant was \$500,000 annually for the period 1967-68 to 1969-70, and \$400,000 for 1970-71.

Subsection 3.—Services for Specific Diseases or Disabilities

Tuberculosis.—New active cases of tuberculosis in Canada in 1968 numbered 4,824 or 23 per 100,000 population, and in 1969 the total was 4,438 or 21 per 100,000. Re-activated cases reached 755 in 1968 and 680 in 1969. Deaths again decreased, to 630 in 1968. Provincial health departments, assisted by voluntary agencies, conduct anti-tuberculosis case-finding programs through community tuberculin-testing and X-ray surveys, with special attention to high-risk groups, hospital admission X-rays, and follow-up of arrested cases. BCG vaccine, estimated to be effective for 80 p.c. of those vaccinated, is used in most provinces to protect certain high-risk groups; in Quebec and Newfoundland, children are routinely immunized. Treatment, including hospital care, drugs and rehabilitation, is free in all provinces. Chemotherapy has shortened hospital stay and facilitated out-patient or domiciliary care. An annual federal grant of \$20,000 is made to the Canadian Tuberculosis and Respiratory Disease Association to improve tuberculosis services across the country.

The National Tuberculosis Reference Centre in Ottawa was opened in 1968 to establish uniform standards in testing for resistance to anti-tuberculosis drugs.

Cancer.—Cancer in 1968 accounted for 18.7 p.c. of all deaths in Canada, and the standardized cancer death rate increased to 137.9 (152.0 for males and 123.8 for females).

It is estimated that in Ontario, for example, one in every three residents may expect to develop some form of cancer. In Canada, cancer ranks second highest as a cause of death; and over 91 p.c. of the deaths from cancer occur after 45 years of age. Special provincial agencies for cancer control, usually in the health department or a separate cancer institute, carry out cancer detection and treatment, public education, professional training, and research in co-operation with local public health services, physicians and the voluntary Canadian Cancer Society branches. Although the provisions are not uniform, all cancer programs provide a range of free diagnostic and treatment services, to both out-patients and in-patients, financed by the hospital insurance programs or the federal-provincial cancer control grants. Hospital insurance benefits for cancer patients include diagnostic radiology, laboratory tests and radiotherapy. The cancer control programs in Saskatchewan and New Brunswick also pay for medical and surgical services; in most provinces these costs are covered under the public medical care insurance schemes.

Venereal Diseases.—Because of under-reporting, public health authorities consider the prevalence of venereal disease to be much higher than the number of cases recorded. In 1969 there were 2,327 cases of syphilis and 27,111 cases of gonorrhoea reported in Canada. The provincial department of health operates clinics which provide free diagnostic and treatment services in most of the larger cities. In addition, the provinces supply free drugs to physicians treating cases in private practice. The local public health departments are concerned with case-finding, follow-up of contacts, and maintenance of health education programs.

Alcoholism.—In all provinces, health departments or other official agencies administer programs for the prevention and control of alcoholism, including public education and related studies. Conservative estimates place the number of Canadians currently requiring these services at 270,000, if a clinical definition of alcoholism is used. Treatment services available are mainly for out-patients but, with the increasing awareness of need, most provinces have expanded facilities for in-patient services. Other types of facilities operated by official and voluntary agencies include hostels and special farms or prison centres for chronic offenders with drinking problems. In several provinces, alcoholics are treated in detoxication wards rather than in jails. Provincial alcoholism agencies in Ontario, Quebec and Saskatchewan have broadened their programs to include other addictions, and British Columbia supports a separate narcotic addiction foundation. Because addictions are widely prevalent, hospitals, mental health services, and other public and voluntary health and social agencies are also involved in their diagnosis and treatment.

Other Diseases or Disabilities.—Many services for persons with chronic disabilities, such as heart disease, arthritis, diabetes, visual and auditory impairments and paraplegia have been initiated by voluntary agencies assisted by federal and provincial funds. Today, treatment for specific conditions is available at hospital out-patient clinics and in-patient or day centres, at separate clinics and rehabilitation centres and under home-care programs. (See pp. 354-355.)

Subsection 4.—Public Medical Care Insurance and Programs

Genesis of Provincial Plans.—Prior to the establishment of government-administered medical insurance in most provinces over the past few years, prepayment arrangements to cover the cost of physicians' services, mainly voluntary as regards enrolment, had developed rapidly in both the public and the private sectors. By the end of 1968, basic medical or surgical coverage, or both, was being provided to about 17,167,000 Canadians, representing 82.8 p.c. of the population. Of these, the voluntary plans operating purely in the private sector provided coverage for 10,906,000 persons or 52.6 p.c., and public plans of various kinds covered 6,261,000 persons or 30.2 p.c. At the end of 1969, when public medical care programs were operating in seven provinces, total insurance coverage for physicians' services was 18,885,000 or 89.7 p.c. of the population; public plans accounted

for coverage of 71.5 p.c. of the total population or 15,058,000 persons (up by 8,797,000 over the previous year) and private plans for coverage of 18.2 p.c. of the population. It is anticipated that, by the end of 1970, all ten provinces will have implemented public plans. The federal grants-in-aid program for provincially administered medical care insurance plans became effective July 1, 1968, as noted on p. 332.

Not all aspects of private insurance for physicians' services were phased out after 1968. In Saskatchewan, two non-profit private plans continued as fiscal intermediaries to transmit claims and payments between physicians and the public insurance administration. In Ontario, British Columbia and Nova Scotia, certain private insurance agencies continued as non-profit carriers performing administrative functions such as enrolment, checking eligibility, and paying claims, on behalf of or under the supervision of the public insurance authority. In other provinces the tendency was to absorb the administrative apparatus of the private agency into the public authority. Whether integrated or not into the public insurance authority as regards physicians' services insurance, several private plans have continued to offer policies to protect against the costs of prescribed drugs, private-duty nursing care, services of paramedical personnel, and other services not yet covered by the government plans.

Provincial Public Plans.—Each of the seven plans in operation at the end of 1969 is described briefly in the paragraphs that follow, in chronological order of entry into the national program. It must be noted that although most doctors are paid on a fee-for-service basis, alternative or additional arrangements include salary, sessional payments, contract service, capitation, and incentive pay. The program descriptions relate to operations, in most provinces, of the principal agency making payments for physicians' services. Such agencies do not represent the total public involvement in medical care since payments may also be made by workmen's compensation boards, by the hospital insurance administrations or, for certain groups excluded from the coverage provided by the provincial agencies, by the federal or other jurisdictions responsible.

Saskatchewan.—The Saskatchewan program, introduced in July 1962, requires enrolment of the entire eligible population. The premiums are compulsory and amount to \$24 a year for a family and \$12 a year for a single person: they cover only a small portion of the program costs. Welfare recipients are automatically covered and no premium payment is required of them.

The following description for Saskatchewan is confined to the operations of the Medical Care Insurance Commission, which is the principal administering agency for the over-all provincial public authority concerned with prepaid medical care. The Commission makes payments to doctors for the bulk of the services provided under the program. A segment of the population obtains its insured services under terms and conditions identical to those observed by the Commission but by way of a separate administering agency known as the Swift Current Health Region. Also, the provincial authority arranges for payment, for care in mental and tuberculosis institutions and for cancer control.

In the program of the Medical Care Insurance Commission, medical benefits include home, office and hospital visits, surgery, obstetrics, psychiatric care outside mental hospitals, anaesthesia, laboratory and radiological services, preventive medicine, and certain services provided by dentists. There are no waiting periods for benefits and no exclusions for reasons of age or pre-existing health conditions. Refractions by optometrists are also an insured benefit.

The Commission pays for approved services on the basis of 100 p.c. of the fees listed in the physicians' fee schedule,* except for certain classes of services where a utilization charge applies. These utilization charges are \$1.50 for each office visit and \$2.00 for each home and out-patient call and are payable by the patient to the attending physician. In such instances, the financial responsibility of the public authority is reduced by the amount

* Effective Aug. 1, 1970, the basis of payment was changed to 100 p.c. of the 1968 fee schedule for most visits.

of the applicable fee. To avoid financial hardship to patients in exceptional cases, there is provision for a family maximum on the total amount of such fees that must be paid. Welfare recipients are not required to pay utilization fees; instead, the medical profession, by agreement, accepts 85 p.c. as payment in full for all services rendered to welfare patients.* The co-charges are thus paid by the provincial government (or by the Federal Government on behalf of additional exempted groups such as Indians and recipients of war veterans allowances).

Physicians may elect to receive payment in three ways. First, the physician may receive directly from the public authority payment of 100 p.c. of the tariff in the 1968 fee schedule of the Medical Association less the utilization fee, and accept this payment along with the utilization fee payable by the patient, as payment in full. Secondly, patients and physicians may enrol voluntarily with an "approved health agency" that serves as intermediary with respect to payment between the public authority and the physicians; here also the physician receives 100 p.c. of the tariff less the utilization fee. Thirdly, a physician may elect to submit his bill directly to the patient who pays him either before or after seeking reimbursement from the public authority; the physician may bill the patient directly for amounts over and above what the public authority has paid.

British Columbia.—The province became a participant under the federal Medical Care Act on July 1, 1968. The plan is governed by a public commission with jurisdiction over a number of "licensed carriers", which are non-profit agencies charged with responsibility for day-to-day management of the separate components of the program. In addition to physicians' services and a limited range of oral surgery in hospital, the benefits include refractions by optometrists, some orthoptic services, limited physiotherapy, special nursing, and chiropractic and naturopathic services.

Participation in the program is voluntary. At the end of 1969, 2,046,000 persons or about 98 p.c. of the population was covered. Premiums are \$5 a month for single persons, \$10 a month for two-person families, and \$12.50 a month for families of three or more. For eligible residents, the government offers subsidies amounting to 90 p.c. of the premium for persons with no taxable income and 50 p.c. of the premium for persons with taxable income from \$1 to \$1,000. Welfare recipients are automatically covered without payment of premium.

Payment is made at 90 p.c. of the current fee schedule. Physicians either bill patients for services rendered or accept payments directly from a licensed carrier. In the former case the physician has to notify the patient in writing before rendering a service that he is a non-participating physician, and the patient has to agree in writing that he is prepared to pay more than the amount of reimbursement that he may receive from the public authority. In the latter case, the physician may also charge a fee in excess of the tariff, provided the patient has been duly notified, he agrees in writing to the extra charge, and the amount of the extra charge is made known to the commission.

In British Columbia, by agreement between the plan and the medical profession, fees are adjusted periodically on the basis of a formula that takes into account changes in price and wage levels in the consumer and industrial sectors.

Newfoundland.—This province became a participant on Apr. 1, 1969. The plan covers all medically required services by doctors, plus a limited range of oral surgery in hospital. Refractions by optometrists are not a benefit. All eligible residents are covered and there are no premium levies; the provincial portion of total costs for insured services is met from general revenue.

Benefit payments are limited to 90 p.c. of the fee schedule. Physicians must formally elect, and use exclusively, one of the modes of payment available. A participating physician must accept 90 p.c. of the fee schedule as payment in full. A non-participating physician may impose additional charges provided he informs the beneficiary that he is not participating physician and that he reserves the right to charge in excess of the amount

* Effective Aug. 1, 1970, the basis of payment was changed to 100 p.c. of the 1968 fee schedule for most visits.

payable by the plan. Traditionally, large numbers of doctors in Newfoundland contracted with the provincial government and with certain voluntary agencies to receive salaries for service in outlying areas; these arrangements are still in force.

Nova Scotia.—Nova Scotia became a participant on Apr. 1, 1969. All eligible residents of the province are covered. Registration is required but there are no premiums, the entire amount of the provincial portion of the costs of insured services being obtained from general revenues. Insured services include all medically necessary procedures by practitioners, plus a limited range of oral surgery procedures in hospitals. Refractions by optometrists are not a benefit.

Benefit payments by the plan are made at 85 p.c. of the current fee schedule. Physicians must elect either to participate, that is, accept all payments directly from the plan, or not to participate. In either case, physicians may extra-bill but they must obtain written consent from the patient prior to rendering the service, and the amount of the extra charge has to be made known to the commission.

The Nova Scotia plan is administered by a non-profit carrier designated by the public authority as its sole agent with respect to fee-for-service accounts. This agency carries out all functions relating to eligibility checking and the processing and payment of claims, subject to review and audit by the public authority.

Manitoba.—Manitoba began participating under the federal Medical Care Act on Apr. 1, 1969. Enrolment is compulsory for all eligible residents but failure to pay the required premiums is not a barrier to receipt of insured services. Premium levies are 55 cents a month for single persons and \$1.10 a month for families. Coverage of welfare recipients is automatic without premium payment. There are no premium subsidies. The insured benefits cover all medically required services provided by medical practitioners and limited dental surgery in hospitals. Also included, with limitations, are the services of chiropractors and refractions by optometrists.

Physicians may elect to participate in the plan and to accept all payments from the public authority, or they may elect to receive payments direct from all their patients. In the former case, the amount received (85 p.c. of the fee schedule) must be accepted as payment in full. A non-participating physician must give a patient "reasonable notice" if he intends to extra-bill.

Alberta.—Alberta became a participating province under the federal Medical Care Act on July 1, 1969, with administration placed under a Health Care Insurance Commission. Registration, as in Saskatchewan, was compulsory for all eligible residents (except that failure to pay premiums was not a barrier to receipt of insured services) and the levels of benefit were similar to those in Saskatchewan for the services of doctors and oral surgeons. Additionally, the plan provided limited coverage for such paramedical services as refractions by optometrists, podiatry, chiropractic and osteopathy. Doctors were paid at 100 p.c. of the 1968 fee schedule of the medical association. Physicians could elect several modes of submitting claims for payment. In all instances, though, the Alberta doctors retained the right to extra-bill patients if they wished, subject to prior agreement by the patient. Monthly premiums were \$5 for single persons and \$10 for families. No premium payment was required from welfare recipients. Subsidies reduced the premiums \$2.50 for single persons, and \$5 a month for families whose combined taxable income in the previous year did not exceed \$500. There was a provision that the province would pay up to full premiums for those residents who could prove financial need.

Substantial changes in the program became effective July 1, 1970. A combined annual premium was established of \$69 for single persons and \$138 for families to cover both medical and hospital insurance. Subsidies reduce fee premiums to \$24 for single persons and to \$48 for families with no taxable income in the previous year; to \$36 for single persons whose taxable income does not exceed \$500 and to \$72 for families whose combined taxable income does not exceed \$1,000. Registration and payment of applicable premiums is compulsory. Failure to comply makes householders liable, at time of seeking service, for payment of back

premium levies, plus a penalty of 10 p.c. of the unpaid premium, in order to ensure payment of the doctors' claims. Residents objecting in principle to claiming benefits under the new program can now elect to remain outside the program (to "opt out") and not to be liable for premium payment. For hospital and related care, they are at liberty to obtain private insurance coverage but application of the federal Medical Care Act prevents private carriers from offering insurance for physicians' services.

The new plan also offers subscribers the option of purchasing insurance for additional health services (again, with subsidy provisions) from the voluntary Alberta Blue Cross agency. Rates, applicable to non-group enrollees only, are lower than regular non-group coverage offered by this agency but slightly higher than regular group rates. The optional membership offers coverage for hospital differential charges for semi-private and private ward care, ambulance services, drugs, appliances, home nursing care, naturopathic services, clinical psychological services, and dental care needed because of accidental injury. Also, since July 1, 1970, payments to physicians are made at 100 p.c. of the 1969 fee schedule.

Ontario.—Ontario began participating on Oct. 1, 1969. Enrolment is compulsory for persons in specified employed groups and voluntary for others. The insured benefits currently cover all medically required services of medical practitioners and of oral surgeons in specified hospital settings, and refractions by optometrists. Provision was made, after July 1, 1970, for coverage, with limitations, of certain paramedical services offered by chiropractors, osteopaths and podiatrists.

Payments are made at 90 p.c. of the current fee schedule. Physicians may choose various modes of payments but are not required to enter into a formal commitment to confine themselves to any given mode. Regardless of the mode of payment selected, a physician is required to advise the patient of any intention to charge more than is provided under the plan. Premiums are \$5.90 a month for single persons, \$11.80 a month for two-person families, and \$14.75 for families of three or more. Coverage is automatic for welfare recipients and no premium payment is required of them. Subsidies for low-income families modify premiums as follows. (1) For those with no taxable income in the previous year—full premium assistance (i.e., 100 p.c. subsidy). For those with some taxable income—\$2.95 a month (i.e., 50 p.c. subsidy) for single persons if taxable income in previous year was \$500 or less; \$5.90 a month (i.e., 50 p.c. subsidy) for two-person families if combined taxable income in previous year was \$1,000 or less; and \$5.90 a month (i.e., 60 p.c. subsidy) for families of three persons or more if combined taxable income in previous year was \$1,300 or less. There are two additional provisions relating to financial aid. Coverage for three months is paid for families qualifying for temporary assistance, and recipients of old age security pensions are entitled to full subsidy of premiums at permissible income levels higher than the ceilings set under the general subsidy program.

The public authority in Ontario makes use of administering agencies, which can be non-profit agencies or commercial insurance companies handling this component of their activities on a non-profit basis. Agencies can be "designated" or "participating" depending upon the degree of their involvement in enrolment and claims-processing functions. Most of their enrolment is of employee and other groups. Additionally, the Ontario Health Services Insurance Plan itself enrolls members and processes claims and covers the majority of non-group and subsidized beneficiaries.

Health Care Programs for Welfare Recipients.—Provincial programs providing certain medical care and other health care benefits to recipients of welfare allowances were in operation in all provinces prior to the introduction of province-wide medical care insurance. Following the implementation of such plans in Saskatchewan, Alberta, British Columbia, Ontario, Manitoba, Nova Scotia and Newfoundland, provincial welfare recipients became automatically enrolled for benefits identical to those applicable to the general population, and without premium payment. Co-charges and extra-billing are usually waived. Programs expressly covering welfare recipients and providing a virtually comprehensive range of physicians' services continued in Quebec, New Brunswick and Prince

Edward Island pending the commencement of public medical insurance plans. The costs of these programs are shareable under the Canada Assistance Plan.

The provision of other health care benefits continues to follow a variety of patterns established under provincial or municipal programs with 50 p.c. of the costs assumed by the Federal Government under the Canada Assistance Plan.

All generally used prescription drugs are included in New Brunswick, Manitoba, Saskatchewan, Alberta and British Columbia; extensive dental care and optical care are provided in the four westernmost provinces, although certain services may be subject to special authorization, to dollar limits, or both. Ontario has a basic dental-care program for recipients of mothers' and dependent fathers' allowances and their children, and shares the cost of prescribed optical care, prosthetic appliances, drugs and dental care provided at municipal discretion. Such services as home nursing, appliances, physiotherapy, podiatry, chiropractic and emergency transportation may also be paid under some programs.

Subsection 5.—Services for the Disabled and Chronically Ill

The success of rehabilitation programs for injured workers, veterans, handicapped children and other disability groups has encouraged more recent efforts to extend such services to all handicapped persons. Physical medicine and rehabilitation departments have been established in teaching hospitals and in most veterans' and children's hospitals. There are about 40 children's hospitals and rehabilitation centres located in the main cities; many children are also treated at general hospitals, or at rehabilitation centres that serve both adults and children. Five rehabilitation centres are operated under workmen's compensation programs. Services for veterans are dealt with at pp. 408-409.

Hospital services available to in-patients and out-patients include physical medicine, physiotherapy, occupational therapy and social services; most of the children's hospitals and the teaching hospitals also supply speech therapy. The rehabilitation centres provide comprehensive medical, psychosocial and vocational services to more severely disabled persons. Provincial and community agencies providing rehabilitation and home care services co-operate in the rehabilitation of disabled persons.

Most large general hospitals operate out-patient clinics for various diseases and disabilities, such as arthritis and rheumatism, diabetes, glaucoma, speech and hearing defects, heart diseases and orthopaedic and neurological conditions. Voluntary agencies concerned with such specific disability groups as arthritics, the blind, the deaf, children suffering from cystic fibrosis, haemophilia or muscular dystrophy, the mentally ill or retarded, or disabled persons generally, are also broadening their rehabilitation services to include counselling, personal aids and appliances, transportation, employment and education, sheltered workshops and services for the homebound. Home-care programs under either hospital or community sponsorship, have been established in five provinces to provide nursing, homemaker, physiotherapy and other services to the disabled, the chronically ill, the aged, and the convalescent.

Provincial health, welfare and education departments and voluntary agencies are developing specialized services for physically and mentally handicapped children. Most provinces have registries of handicapped children, of varying coverage, and these are being found increasingly useful in the planning and co-ordination of rehabilitation services. In addition to medical rehabilitation, health departments and the crippled children's societies provide family counselling, recreation, transportation and foster-home care; travelling clinics extend periodic diagnostic and treatment services to outlying areas. Special schools or classes for various groups of handicapped children are operated by local school boards in the main cities but most of the 15 residential schools for the deaf and the six for the blind are operated under provincial auspices.

Regional prosthetic research and training units, supported by national health grants, have been set up in rehabilitation centres in Montreal, Toronto and Winnipeg, and in the Bio-Engineering Institute of the University of New Brunswick. Artificial limbs and

prosthetic appliances are available in 12 prosthetic centres across Canada in accordance with provisions determined by provincial health departments. A federal-provincial program assists in the extraordinary rehabilitation, maintenance and counselling costs on behalf of children with thalidomide-induced defects.

Eleven university schools offer training in physical therapy and/or occupational therapy and four provide training in audiology and speech therapy. In the year ended Mar. 31, 1970, of the \$30,900,290 made available through the general health grants to assist the provinces in their rehabilitation programs, \$2,093,458 was specifically allocated to the Medical Rehabilitation and Crippled Children Grant. These grants are used to develop medical rehabilitation personnel through grants to the university schools and student bursaries, for equipment, and for research.

Section 3.—Emergency Health Services

In 1951 when the responsibility for civil defence was transferred from the Department of National Defence to the Department of National Health and Welfare, the Civil Defence Health Services group was formed within the Department to make plans for health services in a wartime emergency. In 1959, the Civil Defence Order assigned special powers and duties to several Ministers to prepare and to assist the provincial and municipal governments to prepare for war emergencies (this Order, as amended in 1963, was replaced in 1965 by the Civil Emergency Measures Planning Order) and the Canada Emergency Measures Organization was created to co-ordinate civil-defence planning (see Chapter XXVI, Sect. 7).

The Emergency Health Services Division, established in 1949 by the Minister of National Health and Welfare in his own Department, encourages, with the support of an advisory committee, the provinces to develop their own emergency health services divisions. These are organized under a provincial director who is generally assisted by a health-supplies officer and a nursing consultant. A staff medical officer represents the federal Emergency Health Services in each provincial organization.

The provincial emergency health services have four tasks: they ensure effective functioning of health services so that vital health services will be maintained in an emergency or reorganized after a disaster; they encourage and co-ordinate local planning for the development of emergency medical units; they inform and educate the public through courses in first aid to the injured and in home nursing, and train professional health workers, students and volunteers for their functions during an emergency; and they dispose of emergency medical units of the national stockpile at strategic locations.

Not all provincial and municipal health departments have developed their emergency planning to such an extent that they could function in a wartime disaster. Some, however, have planned their emergency measures so that they have been able to meet peacetime disasters successfully. Many emergency medical units have been strategically located and the governments generally are agreed upon the objective of emergency health planning.

Section 4.—Hospital and Other Health Statistics

Statistical information on the health of Canadians is limited to the well established and highly standardized mortality, communicable disease and institutional statistics series, all of which have been available for a long period, and the recently established hospital morbidity series and other series covering operations under the federal-provincial hospital insurance program (pp. 335-337). Much statistical information is also available from provincial and other health sources. Information arising from medicare programs is available mainly from provincial medicare plans.

Statistics on causes of death are given in the Chapter on Vital Statistics, pp. 304-307; those on hospital statistics including hospital morbidity in Subsection 1 following; those on notifiable diseases in Subsection 2; and those relating to physicians and their earnings in Subsection 3.

Subsection 1.—Hospital Statistics*

Canadian hospitals are classified, for statistical purposes, according to (1) type of ownership, which can be public, private or federal, and (2) type of service provided, which can be general, allied special (chronic, convalescent, rehabilitation, maternity, communicable disease or orthopaedic), mental or tuberculosis. General hospitals, which account for the greatest number of beds, are subdivided by size, based on rated bed capacity.

Data pertaining to the number of hospitals in operation (Table 5), their classification and their rated bed capacities (Table 6) were available for Jan. 1, 1970 (figures were previously given as at Dec. 31 of the year indicated) at the time of preparation of this Subsection but Dec. 31, 1968 data were the latest available for Tables 7 to 14.

As shown in Table 5, the number and bed capacity of hospitals operating in Canada has fluctuated very little over the past few years.

Totals.....	205,839	207,309	211,422	211,996	210,589

¹ As at Dec. 31.² As at Jan. 1.

Table 6 shows the number and bed capacity of public, private and federal hospitals classified by province and by type as at Dec. 31, 1968 and Jan. 1, 1970; rated beds per 1,000 population numbered 10.2 on the former date and 10.0 on the latter. Generally, the proportion of rated beds in general and allied special hospitals has been rising over the past few years while the proportions for mental and tuberculosis hospitals have been declining. In 1968, general hospitals accounted for 56.7 p.c. of the rated beds, or 5.8 beds per 1,000 population; and in 1969 (or Jan. 1, 1970), 56.8 p.c., or 5.6 per 1,000 population. In both years, the lowest number of rated beds in general hospitals was recorded in Quebec (4.9 and 4.7, respectively), and the highest number in Saskatchewan (7.2 each year). Mental hospitals accounted for 30.3 p.c. (3.1 per 1,000 population) and 29.1 p.c. (2.8 per 1,000 population) of the rated beds in 1968 and 1970, respectively; allied special hospitals for 11.0 p.c. (1.1 per 1,000 population) and 12.3 p.c. (1.3), respectively; and the remainder, 2.0 p.c. (0.2 per 1,000 population), and 1.9 p.c. (0.2), respectively, were located in tuberculosis sanatoria.

* Prepared in the Institutions Section of the Health and Welfare Division, Dominion Bureau of Statistics. Detailed information will be found in the following DBS publications: Hospital Statistics, Vols. I to VII (Catalogue Nos. 83-210 to 83-216); Mental Health Statistics, Vol. III (Catalogue No. 83-205); Tuberculosis Statistics, Vol. II (Catalogue No. 83-207); Annual Salaries of Hospital Nursing Personnel (Catalogue No. 83-218); and List of Canadian Hospitals and Related Institutions and Facilities (Catalogue No. 83-201).

¹ Based on estimated population as at Jan. 1, 1970.

Total adult and child admissions to all Canadian hospitals exceeded 3,408,900 in 1968, an increase of 3.5 p.c. over 1967; there were 164 admissions per 1,000 population in the later year. Admissions to general hospitals in 1968 numbered 3,238,600, or 156.1 per 1,000 population, compared with 3,119,000 or 152.9 per 1,000 population in the previous year. The average daily population in all Canadian hospitals was 178,130 in 1968, little changed from the average of 178,050 in 1967. Of the 1968 average daily total, general hospitals accounted for 53.2 p.c. and mental hospitals for 33.4 p.c., compared with 51.7 p.c. and 35.0 p.c., respectively, in 1967. Percentage occupancy varied with the type of hospital and was highest in private allied special hospitals (94.4 p.c.) in 1968 and in public mental hospitals (98.1 p.c.) in 1967; in both years the lowest rate of occupancy was in federal tuberculosis sanatoria (61.9 p.c. and 67.0 p.c., respectively).

7.—Movement of Patients and Patient-Days in Operating Public, Private and Federal Hospitals, 1967 and 1968

NOTE.—“Patients” refers to adults and children. All ratios are based on population estimates as at June 1 of the year concerned.

¹ Based on rated bed capacity.

The average length of stay of adults and children separated from public general and allied special hospitals was 11.7 days in 1968, little changed from 1967 when the average was 11.5 days. Table 8 shows the variation in average length of stay by type of hospital and by region. The chronic, convalescent and rehabilitation hospitals, with an average length of stay of 126 days in 1968, represent the upper limit, far exceeding that of other types of hospitals. In public general hospitals, length of stay increases with bed capacity, usually because of the greater availability and utilization of more complex services in larger hospitals to which more severe cases are referred.

Table 9 shows that full-time personnel in all Canadian hospitals numbered 313,395 in 1968, which was an increase of 3.6 p.c. over 1967. In all general hospitals the number of full-time personnel per 100 rated beds was 195.8 in 1967 and 198.1 in 1968; in mental hospitals it was 67.7 in 1967 and 71.2 in 1968; and in tuberculosis sanatoria 94.4 and 91.6, respectively. It is interesting to note that the proportion of the Canadian civilian labour force employed, both full-time and part-time, in all Canadian hospitals gradually increased from 3.7 p.c. in 1961 to 4.5 p.c. in 1968.

Table 10 gives revenues and expenditures of public hospitals in 1967 and 1968. Revenues for all such hospitals in 1968 totalled \$1,989,214,000, an amount 16.0 p.c. more than in 1967. The proportion accounted for by net in-patient earnings was lowest in public maternity, communicable disease and orthopaedic hospitals (79.7 p.c.) and highest in public chronic, convalescent and rehabilitation hospitals (94.5 p.c.). Of the total revenue, public general hospitals accounted for \$1,512,547,000, an increase of 17.2 p.c. over 1967.

Continuing the rapid upward trend of recent years, total expenditures in all public hospitals amounted to \$2,060,980,000 in 1968, 15.6 p.c. higher than those in 1967 which, in turn, had been 15.4 p.c. above those in 1966. Gross salaries and wages represented the largest expenditure item in both 1967 and 1968, ranging in the later year from a low of 64.7 p.c. in mental hospitals to a high of 71.6 p.c. in chronic, convalescent and rehabilitation hospitals. Of the total expenditures, public general hospitals accounted for \$1,573,715,000 in 1968, which was an increase of 16.6 p.c. over 1967. Table 11 shows that the proportion of expenditures allocated to gross salaries and wages was somewhat lower in the Atlantic Provinces than in the other provinces.

Generally, salaries of hospital nursing personnel were 10.6 p.c. higher in 1968 than in 1967 and varied directly according to academic qualifications. For general-duty registered nurses employed in public general hospitals, the average annual salary varied from \$5,521 for those classified as graduate nurse only, to \$5,976 for those with a Bachelor's degree in nursing (Table 12). Among graduate nurses without additional qualifications in public general hospitals, directors of nursing education received the highest average salary (\$7,636) and general-duty nurses (not registered) the lowest (\$4,997). On the average, general-duty nurses (registered) without additional qualifications employed in public mental hospitals earned more (\$5,821) than their counterparts in other types of hospitals.

12.—Average Annual Salaries of Nursing Personnel in Public Hospitals, by Academic Qualifications, Employment Category and Type of Hospital, 1968

¹ General-duty (registered) nurse—public general hospitals.

² Graduate nurse without additional qualifications—public general hospitals.

³ General-duty (registered) nurse without additional qualifications.

In public general hospitals, the cost per patient-day rose from \$43.40 in 1967 to \$48.44 in 1968, or 11.6 p.c. In both years this per diem rate was lowest in the 10-24-bed-size hospitals (\$28.87 in 1967 and \$32.50 in 1968); in 1967 it was highest in the 500-999-bed-size hospitals (\$52.76) and in 1968 in hospitals with 1,000 or more beds (\$59.31) (Table 13). Provincially, public hospitals in Prince Edward Island maintained the lowest cost per patient-day in both years (\$29.20 in 1967 and \$31.65 in 1968), while, at the other extreme,

Quebec had the highest per diem rates (\$53.74 in 1967 and \$56.31 in 1968) (Table 14). The per capita cost of operating and maintaining all public hospitals increased by 109 p.c. during the period 1961-68, rising from \$47.46 to \$99.35.

¹ Adults and children.

Hospital Morbidity.—A growing need for additional information on illness in Canada was met in part by a statistical program first undertaken for 1960 involving separations (discharges and deaths) from the general and allied special hospitals. The program provided data on primary diagnosis, days of care, length of illness and age composition for all hospital patients except those in mental hospitals and tuberculosis sanatoria. (Age, sex and diagnostic information on persons treated in mental hospitals and in tuberculosis sanatoria has been available at the national level for many years but no similar information has been available for persons treated in the other kinds of hospitals.) About 100 out of every 1,000 persons are hospitalized during a year and, of these, 96 or 97 are treated in general and allied special hospitals. The 1968 data were the latest available at the time of preparation of this Subsection.

It should be noted that the picture of morbidity provided by these statistics is not, of course, complete. A total morbidity picture would include not only the morbidity covered by in-patient hospital care but also out-patient morbidity, morbidity covered by treatment outside the hospitals, and morbidity for which no treatment is received. Nevertheless, the illnesses that receive hospital care are, in general, more serious and more important than the illnesses that do not receive hospital care and this, together with the fact that the diagnostic quality of hospital morbidity statistics is very high, makes hospital morbidity statistics a most important source of information. Tables 15 and 16 present, for 1968, adult and child patients (excluding newborn) in terms of 17 diagnostic categories (Canadian) which consolidate the much more detailed international classification of diseases.

Subsection 2.—Notifiable Diseases*

The notifiable diseases most predominant in 1969 were venereal diseases (29,563 cases), measles (11,720 cases), streptococcal sore throat and scarlet fever (11,156 cases) and infectious and serum hepatitis (10,754 cases).

The rate of venereal disease notifications, after rising from 117.2 in 1966 to 121.0 in 1967, dropped slightly to 119.6 in 1968 and increased to 140.4 in 1969. Because of the high incidence of measles in 1969, this disease was restored to the notifiable list after having been removed in 1959. Streptococcal sore throat and scarlet fever incidence, which has long been one of the major diseases, was lower in 1969; notification rate per 100,000 population dropped from 100.9 in 1966 to 53.0 in 1969. The rate of notifications for infectious and serum hepatitis also dropped slightly to 51.1 in 1969 after rising from 29.4 in 1966 to 54.0 in 1968.

Table 17 shows the number and notification rates of notifiable diseases, by province, in 1969.

* Prepared in the Public Health Section, Health and Welfare Division, Dominion Bureau of Statistics.

Subsection 3.—Numbers of Physicians and Earnings of Those in Private Practice

In December 1969 there were 29,659 active civilian physicians in Canada. Over a third of them (11,201) were located in Ontario. British Columbia had the lowest population/physician ratio (653) followed by Ontario (676) and Quebec (706). The national average at December 1969 was 717 persons per physician.

Table 18 gives the provincial distribution and population/physician ratios for 1969 and also shows the trend in the national total since 1901. The figures include all junior and senior interns and residents and physicians engaged in administration, teaching, research, etc., within the medical field, as well as those in the clinical practice of medicine.

¹ As at June 1; figures for 1901 to 1951 exclude Yukon and Northwest Territories. ² As at Dec. 31; estimates for 1962 to 1968 for interns and residents are based on DBS data and those for other active civilian physicians are based on data contained in *List Catalogue*, Canadian Mailings Limited (Seccombe House). ³ Produced by the Department of National Health and Welfare from information supplied by Medical Marketing Systems Limited (Seccombe House).

Earnings.—The average gross professional earnings of fee-practising physicians in 1968 amounted to \$42,783, which was 10.6 p.c. higher than in 1967 and 65.4 p.c. higher than in 1961. The highest average gross earnings in 1968 were reported in Alberta at \$51,894. In Ontario and Newfoundland they were above the national average and in the remaining provinces they ranged from \$41,848 in British Columbia to \$32,584 in Prince Edward Island. Generally, throughout the eight-year period 1961-68, average gross earnings have been at a higher level in Newfoundland, Ontario and the western provinces than in Quebec and the Maritime Provinces.

The net returns to physicians, after deduction of the expenses of professional fee practice, reveal similar geographic patterns, as shown in Table 19. Net earnings for Canada as a whole averaged \$28,615 in 1968, 9.7 p.c. higher than in 1967 and 73.7 p.c. higher than in 1961. The highest provincial average net income was reported by Alberta physicians at \$33,221, followed by Ontario physicians at \$32,098; the lowest average net income, \$22,636, was reported in Prince Edward Island.

¹ Includes wages and salaries for professional services.

² Excludes physicians employed on a salaried basis

under the Cottage Hospital Medical Service and by subsidized voluntary prepayment plans. ³ Excludes some physicians employed on a salaried basis in private group-practice. The estimated number of such excluded physicians in 1965 was 95.

⁴ Data for the Yukon and Northwest Territories are posted for record only. ⁵ Includes net professional fees after deducting expenses of practice, and wages and salaries incidental to fee practice.

PART II.—WELFARE AND SOCIAL SECURITY

Responsibility for social welfare is shared by all levels of government. Comprehensive income maintenance measures such as the Canada Pension Plan, old age security pensions, the guaranteed income supplement program, family allowances, youth allowances and unemployment insurance, where nation-wide co-ordination is required, are administered federally. The Federal Government gives substantial aid to the provinces in meeting the costs of public assistance and also provides services for special groups such as veterans, Indians, Eskimos and immigrants. The Department of National Health and Welfare is generally responsible for federal welfare matters, although the Departments of Veterans Affairs, Indian Affairs and Northern Development, and Manpower and Immigration operate programs for specific groups.

Administration of welfare services is primarily the responsibility of the provinces but the provision of services is often assumed by local authorities, generally with financial aid from the province.

Co-ordination in welfare matters between different levels of government has expanded considerably in recent years and in various ways. These include meetings of ministers, deputy ministers and other officials concerned with the development of programs and administrative arrangements. The agreements that have been reached provide, among other things, for the exchange of statistical and other information between the two levels of government and for the provision, at the request of the provinces, of a variety of consultative services. A federal-provincial meeting of welfare ministers in January 1969 authorized the appointment of three joint task forces to study welfare programs and assistance and to make recommendations in specified areas.

Co-ordination in welfare matters between government and voluntary authorities is facilitated by the National Council of Welfare. Until January 1970, the Council was mainly a government body presided over by the Deputy Minister of National Health and Welfare with the Deputy Minister of Welfare of each province included among its members. It has now been reconstituted as a citizens' advisory council and consists of 21 private citizens about half of whom have been selected from organizations of consumers of welfare services and the remainder from institutions involved, directly or indirectly, in providing welfare services. The Council is responsible for advising the Minister of National Health and Welfare on such matters related to welfare as it deems appropriate as well as to consider matters referred to it by the Minister.

Section 1.—Federal Government Programs*

Subsection 1.—Canada Pension Plan*

The Act establishing the Canada Pension Plan received Royal Assent on Apr. 3, 1965 and was proclaimed in force on May 5 of the same year. Collection of contributions commenced in January 1966, in January 1967 the first benefits were paid in the form of retirement pensions, in February 1968 the first survivors' benefits were paid, and in February 1970 the first disability benefits were paid. The Plan enables millions of people to make financial provision for their retirement and to protect themselves and their dependants or survivors against loss of income in the event of their disability or death.

The Plan is universally applicable throughout Canada, except in the Province of Quebec, where a comparable pension plan has been established. The Canada and Quebec Pension Plans, however, are closely co-ordinated and operate virtually as a single program. Together, they cover almost all members of the labour force in Canada. Benefit credits accrued under the Canada or Quebec Plans are portable throughout Canada. A contributor who may have worked for more than one employer during his lifetime or who may be self-employed for all or part of his working life will accumulate pension credits regardless of where he may work in Canada. Benefits under the Plan are payable to beneficiaries whether or not they live in Canada. Every contributor must have a social insurance number so that his pensionable earnings may be accurately recorded for benefit purposes.

The maximum pensionable earnings for a year were \$5,000 for both 1966 and 1967, \$5,100 for 1968, \$5,200 for 1969, and \$5,300 for 1970. From 1971 to 1975, the figure of \$5,300 will be adjusted in line with changes in the Pension Index which, in turn, is based on the Consumer Price Index. Beginning in 1976, the maximum pensionable earnings for a year will be adjusted in accordance with changes in the Earnings Index to reflect changes in average wage and salary levels in Canada.

To participate in the Plan, a person must be between the ages of 18 and 70 and earn more than \$600 yearly as an employee, or at least \$800 if he is self-employed. As of 1970, contributions are made on earnings between \$600 and \$5,300 a year in the case of both employees and self-employed persons. Employees contribute at the rate of 1.8 p.c. and a

* See Appendix III for recommendations made in a White Paper on income security tabled in the House of Commons on Nov. 30, 1970, which will, if approved by Parliament, affect payments under the Canada Pension Plan, Old Age Security and Income Supplement and Family Allowances plans.

matching contribution is made by their employers: self-employed persons contribute at the rate of 3.6 p.c. No contributions are to be made by persons while they are receiving disability pensions. Although contributions are made on annual earnings between \$600 and the maxima referred to above, rates of benefit are calculated on total earnings up to that maximum. That is, while contributions are not paid on the first \$600 of annual earnings, that amount is nevertheless included in the calculation of benefits.

The earnings-related component of the benefit which a person is entitled to receive under the Canada Pension Plan is based on the contributor's average pensionable earnings. Before this average is calculated, however, all earnings are adjusted in line with the applicable maximum on pensionable earnings during the benefit year. Thus, when a benefit first becomes payable, the earnings on which it is based are related to the maximum on pensionable earnings at that time rather than when the earnings were received.

Benefits are classified under three main headings: Retirement Pensions; Survivors' Benefits, consisting of a widow's pension, a disabled widower's pension, orphans' benefits, and a lump sum death benefit; and Disability Benefits comprising pensions for disabled contributors and benefits for their dependent children.

From 1970 on, *Retirement Pensions* are payable to contributors who are 65 years of age or over provided that, if under age 70, they are retired from regular employment. For contributors who have reached age 70, retirement pensions are payable regardless of whether or not they are retired. They become payable at their full rate beginning in January 1976. This rate amounts to 25 p.c. of what the updated pensionable earnings of contributors have averaged since Jan. 1, 1966, or from age 18, whichever comes later.

Contributors who become eligible for retirement pensions prior to 1976 receive reduced amounts. In the calculation of retirement pensions that commence during this period, pensionable earnings are averaged over ten years or 120 months. The only exception is where a disability pension has been paid, in which case the time during which that pension was in pay is deducted from the ten years and the remaining period used for averaging purposes. In the calculation of retirement pensions that commence after 1975, provision is made to assist the contributor who may have had periods of low or no earnings during his contributory period. This is accomplished by dropping out the number of months during which contributions may have been made after age 65, either by using the pensionable earnings in those months in place of earlier periods of lesser or no earnings, or by dropping such pensionable earnings out of the calculation if they are less favourable to him. Also dropped out of the calculation are up to 15 p.c. of the number of months he could have contributed before age 65 and the earnings in an equal number of months, although the drop-out must not reduce the number of months for averaging purposes to fewer than 120.

A person under 70 years of age who is in receipt of a retirement pension must meet an earnings test. In 1970, the maximum annual remuneration from employment he may earn without affecting the amount of his pension is \$900. Should his yearly earnings exceed this figure, his pension is reduced as follows. When annual employment earnings are between \$900 and \$1,500, the reduction will equal 50 p.c. of the amount over \$900, or an amount of up to \$300 per year; if earnings exceed \$1,500, the amount deducted will be \$300 plus the actual amount earned over \$1,500. However, the amount of pension is not subject to reduction for any month in which the pensioner does not earn over \$75. At age 70, a contributor is entitled to receive the full amount of his retirement pension regardless of the amount of his earnings.

Survivors' Benefits became payable in February 1968. They are paid to or on behalf of the survivors of a deceased contributor who has made contributions for the minimum qualifying period, which is three years for those whose benefits commence before 1975.

A woman who is widowed between ages 45 and 65 is entitled to a widow's pension consisting of the flat-rate payment plus $37\frac{1}{2}$ p.c. of her husband's retirement pension. The flat-rate component is equal to \$25 multiplied by the ratio of the Pension Index for

the year in which the contributor dies to the Pension Index for 1967. Thus, for 1970, the flat-rate component is \$26.53. Should her husband not be in receipt of a retirement pension at the time of his death, such a pension is calculated in prescribed manner for the purposes of computing the amount of the widow's pension. If a woman is widowed under age 45, the same pension is paid provided she has dependent or disabled children or is herself disabled. If she does not meet any of these requirements, her pension is reduced by an amount equal to $1/120$ for each month she is less than age 45 at the time of her husband's death. Accordingly, if a woman is widowed at age 35 or less, and has no dependent or disabled children and is not herself disabled, she will not receive a widow's pension until she reaches 65 years of age, unless she becomes disabled in the meantime.

A widow aged 65 or over receives a widow's pension equal to 60 p.c. of her husband's retirement pension, regardless of her age at the time her husband died or whether she was receiving a widow's pension before she became 65. Again, if her husband was not in receipt of a retirement pension at the time of his death, one is calculated in prescribed manner in order to compute the amount of the widow's pension. Women who receive widows' pensions may also have contributed to the Canada Pension Plan themselves and consequently may be entitled to retirement or disability pensions in their own right. In such cases, the widow's pension will be combined with the other pension, in accordance with a prescribed formula, but the combined total cannot exceed the maximum retirement pension payable under the Act.

Orphans' benefits are payable on behalf of a deceased contributor's unmarried dependent children. The rate for each of the first four children is equal to the flat-rate component of the widow's pension (\$26.53 for 1970); for more than four children the total benefit, which is divided equally among the children, is the sum of \$26.53 for each of four and half of that amount for each child in excess of four. Benefits are payable until the child reaches age 18 or up to age 25 if he continues to attend school or university full time.

A disabled widower's pension is payable where he was wholly or substantially dependent on his wife for financial support at the time of her death. The test of disability is the same as that for a person who claims a disability pension and the pension formula is the same as that for a disabled widow.

When a contributor dies, a lump sum death benefit equal to six times his monthly retirement pension is paid to his estate. This benefit is subject to a maximum of 10 p.c. of the maximum on pensionable earnings which, for 1970, would mean a payment not exceeding \$530. Should a contributor not be in receipt of a retirement pension at the time of his death, a calculation is made in prescribed manner for purposes of establishing the amount of the death benefit.

Disability Pensions became payable in 1970. A contributor is considered to be disabled if he has a physical or mental disability that is so severe and likely to continue so long that he cannot regularly engage in any substantially gainful occupation. Disability pensions, plus benefits for the dependent children of disabled contributors, are available provided contributions have been made to the Plan for the required minimum period, which is five years for contributors whose disability pensions will commence before 1976. The amount of the pension consists of a flat-rate payment equal to the flat-rate component of a widow's pension plus 75 p.c. of what the contributor's monthly retirement pension would have been had he reached age 65 when his disability pension commenced. Benefits are payable on behalf of a disabled contributor's dependent children at the same rates and under essentially the same circumstances as the orphans' benefits.

All monthly benefits are adjusted upward annually if changes in the Pension Index warrant it. Benefits in payment in 1967 were increased by 2 p.c. effective January 1968, those in payment in 1968 were increased by 2 p.c. effective January 1969, and those in payment in 1969 were increased by 2 p.c. effective January 1970.

Any contributor or beneficiary under the Plan has the right to appeal decisions with which he is dissatisfied. Appeals by employees and employers regarding coverage and

contributions are first made to the Minister of National Revenue and, if the individual is not satisfied with the Minister's decision, he may appeal to the Pension Appeals Board whose decision is final. For self-employed persons, appeals with reference to the assessment of their earnings for Canada Pension Plan purposes are treated in the same way as appeals under the Income Tax Act. With respect to benefits, there is a three-stage appeal procedure: first, to the Minister of National Health and Welfare; secondly, to a Review Committee; and thirdly, to the Pension Appeals Board whose decision is final.

The legislation provides for the investment of the funds that accrue from monthly contributions, less the estimated amounts required to pay benefits and administrative costs over a three-month period. These funds are made available to each province on the basis of the relationship between the contributions made to the Plan by and on behalf of residents of that province and the total contributions made to the Plan. Funds not borrowed by the provinces are invested in federal securities. The Canada Pension Plan is entirely self-supporting in that all benefits and all costs incurred in the administration of the program are financed solely from the contributions made by employees, employers and self-employed persons and the interest earned from the investment of funds.

An Advisory Committee representing employers, employees, self-employed persons and the public, which was established in 1967, reviews from time to time the operations of the Plan, the state of the investment fund and the adequacy of coverage and benefits, and reports to the Minister of National Health and Welfare. In addition, a report on its activities is included in the annual report on the Plan. The legislation authorizes arrangements to be made with other countries to achieve as full coverage of persons in the labour force in Canada as is possible and to ensure the portability of pension credits between Canada and the countries concerned.

The Minister of National Health and Welfare is responsible for the administration of all parts of the program except coverage and the collection of contributions which come under the jurisdiction of the Minister of National Revenue. The Unemployment Insurance Commission is responsible for the assignment of social insurance numbers and for the maintenance of the Central Index. The Department of Finance is responsible for the administration of the Canada Pension Plan Account and the Canada Pension Plan Investment Fund. The Department of Supply and Services gives temporary assistance to the Department of National Health and Welfare in the operation of the electronic data processing service which is required to maintain the records of earnings of contributors and to calculate benefits payable under the Plan. The Chief Actuary, Department of Insurance, is responsible for the preparation of reports on the future financial progress of the Plan and on the effect on the Fund of proposed amendments to the Plan.

The Canada Pension Plan Administration of the Department of National Health and Welfare consists of a head office establishment in Ottawa and a network of 38 District Offices located in the major population centres in Canada outside the Province of Quebec and 104 local offices, the latter on a part-time basis.

Subsection 2. —Old Age Security and Guaranteed Income Supplement*

Old Age Security.—Under the Old Age Security Act of 1951, as amended, the Federal Government pays a monthly pension to all persons aged 65 or over who meet the necessary residence qualifications. Until 1966 the pension was payable to those aged 70 or over but an annual one-year reduction in pensionable age from 70 to 65 was completed in 1970.

* See footnote to p. 374.

Until 1967 the pension amounted to \$75 a month but in 1968 and succeeding years the amount may be adjusted in line with changes in the Pension Index developed for the Canada Pension Plan (see p. 374); it reached \$79.58 a month in January 1970.

The old age security pension is payable to a person of attained age who has resided in Canada for ten years immediately preceding the approval of his application for the pension. Any gaps in the ten-year period may be offset if the applicant had been present in Canada in earlier years for periods of time equal in total to double the length of the gaps; in this case, however, the applicant must also have resided in Canada for one year immediately before the month in which his application for pension may be approved. The pension is also payable to persons of attained age who have left Canada before reaching that age but who have had 40 years of residence in Canada since age 18. A pensioner may absent himself from Canada and continue to receive payments. If he has lived in Canada for 25 years since his 21st birthday, payment outside of Canada may continue indefinitely; if not, payment is continued for six months, in addition to the month of departure, and is then suspended, to be resumed only with the month in which he returns to Canada.

The program is administered by the Department of National Health and Welfare through regional offices located in each provincial capital, to which application is made for pension. The regional office in Edmonton administers accounts for and receives applications from residents of the Yukon and the Northwest Territories. The old age security plan is financed through a 3-p.c. sales tax, a 3-p.c. tax on corporation income and, subject to a limit of \$240 a year, a 4-p.c. tax on taxable personal income. The revenues from these sources are paid into a separate fund called the Old Age Security Fund, from which are paid the old age security pensions and, from Jan. 1, 1967, benefits under the guaranteed income supplement program.

Guaranteed Income Supplement.—A 1966 amendment to the Old Age Security Act provides for the payment of a monthly guaranteed income supplement to old age security pensioners who have little or no income other than the pension. The supplement is limited to pensioners born on or before Dec. 31, 1910, who by reason of age are or will be unable to benefit substantially from the Canada or Quebec Pension Plans. The program commenced on Jan. 1, 1967. Beginning at that date, the maximum supplement was \$30 a month; in any year after 1967, it is to be 40 p.c. of the amount of the flat-rate old age security pension. With the escalation of the latter pension effected January 1970, the maximum supplement was increased to \$31.83 a month. Thus, pensioners with only the old age security pension receive a guaranteed annual income of \$1,336.92 for a single pensioner and, for a married couple who are both pensioners, \$2,673.84. This consists of the monthly \$79.58 pension and the monthly supplement of \$31.83 which is subject to an income test.

Pensioners with income in addition to their old age security pension may receive partial benefits. The maximum supplement is reduced by \$1 a month for every full \$2 a month of income over and above the old age security pension and any supplement that may have been received. Income for this purpose is the same as that computed in accordance with the Income Tax Act. In the case of a married couple, each is considered to have one half of their combined income. Where one spouse will not be receiving an old age security pension at any time in the current year, six times the amount of the monthly old age security pension is deducted from one half of the combined income in calculating the income of the pensioner for guaranteed income supplement purposes.

Payments will not be made to married couples unless both spouses submit returns. However, in order to prevent undue hardship when no statement of income is obtainable from one spouse, the other, in certain circumstances, may be deemed to be single for purposes of determining income. Furthermore, although marital status is determined as at Dec. 31 of the preceding year, even if this status should change in the current year, a special provision allows a person to be deemed either married or single in the preceding year.

If a pensioner who is in receipt of a supplement leaves Canada, the supplement will be paid for the month of departure and for six further months. Payment will then be discontinued until his return.

The guaranteed income supplement program is administered in conjunction with the old age security pension program. An application for the supplement is sent to each person when he begins to receive the old age security pension and subsequently at the beginning of each calendar year. Entitlement is re-assessed each year on the basis of the pensioner's income in the preceding year.

Subsection 3.—Family Allowances*

The Family Allowances Act of 1944 assists in providing equal opportunity for all Canadian children. The allowances do not involve a means test and are paid from the federal Consolidated Revenue Fund. They do not constitute taxable income but there is a smaller income tax exemption for children eligible for allowances.

Allowances are payable in respect of every child under age 16 who was born in Canada, or who has been a resident of the country for one year, or whose father or mother has been domiciled in Canada from a date three years immediately prior to the date of birth of the child. Payment is made by cheque each month, normally to the mother, although any person who substantially maintains the child may be paid the allowance on his behalf. Allowances are paid at the monthly rate of \$6 for each child under 10 years of age and \$8 for each child age 10 or over but under 16 years. If the allowances are not spent for the purposes outlined in the Act, payment may be discontinued or made to some other person or agency on behalf of the child. Allowances are not payable for any child who fails to comply with provincial school attendance legislation, who ceases to be maintained by a parent or who ceases to be a resident of Canada, or on behalf of a girl who is married and under age 16.

The program is administered by the Department of National Health and Welfare through regional offices located in each provincial capital. The Regional Director located at Edmonton also administers the accounts of residents in the Yukon and Northwest Territories.

The Federal Government pays family assistance, at the rates applicable for family allowances, for each child under 16 years of age resident in Canada and supported by an immigrant who has landed for permanent residence in Canada, or by a Canadian returned

* See footnote to p. 374.

Family allowance cheques are of considerable assistance to this mother in her determination to provide adequate and nutritious food for her children.

to Canada to reside permanently. The assistance, which is payable monthly for the first year of the child's residence in Canada, is intended to bridge the gap until the child becomes eligible for family allowances. The eligibility requirements, other than that relating to residence, are the same for family assistance as for family allowances.

The Province of Quebec introduced its own family allowances program, supplementing the federal scheme, under legislation enacted in 1967 (see p. 390), and Newfoundland in 1966 introduced a program called the Parents' Supplement (Schooling Allowance), under which payments are made for children attending school (see p. 390).

Subsection 4.—Youth Allowances

Legislation providing for a program of youth allowances became effective Sept. 1, 1964. The Federal Government does not provide youth allowances in Quebec, which has had its own program, called Schooling Allowances, since 1961. With the introduction of the federal scheme, Quebec agreed to make certain changes in its schooling allowances program so that it would be comparable to the federal measure; since then, that province has been compensated by a tax abatement adjusted to equal the amount that the Federal Government would otherwise have paid in allowances to Quebec residents. The federal youth allowances and the Quebec schooling allowances programs cover all eligible young people in Canada.

Under the federal program, monthly allowances of \$10 are payable in respect of all dependent children aged 16 and 17 who are receiving full-time educational training or are precluded from doing so by reason of physical or mental infirmity. Both the parent or guardian and the child must normally be physically present and living in a province other than Quebec. The allowance is not payable to a parent who resides in Quebec or outside Canada, regardless of where his child may be attending school. However, a child may attend school in Quebec or outside Canada, or, if disabled, receive care or training in Quebec or outside Canada and still be considered eligible, on the basis that he is a resident of a province other than Quebec but is temporarily absent.

Allowances normally commence with the month following that in which family allowances cease and continue until the school year terminates. They are paid retroactively for

the summer months when the child returns to school at the commencement of the new school year, although allowances for a disabled child not attending school are payable continuously throughout the year. Should a student leave school, leave the country permanently, cease to be maintained, take up residence in Quebec, or die, the allowance ceases. Otherwise, the youth allowance continues until the end of the month in which the young person reaches age 18. Youth allowances are considered not to be income for any purpose of the Income Tax Act.

The program is administered by the Department of National Health and Welfare. The national director of the family allowances and old age security programs is also responsible for administering youth allowances, assisted by regional directors located in each of the provincial capitals other than Quebec City. The costs of youth allowances are met from the Consolidated Revenue Fund.

Section 2.—Federal-Provincial Programs

Subsection 1.—Canada Assistance Plan

The Canada Assistance Plan was enacted in 1966 as a comprehensive public assistance measure to complement other income security measures. It provides, under agreements with the provinces, for federal contributions of 50 p.c. of the costs of assistance to persons in need and of the costs of certain welfare services. The plan has largely replaced the Unemployment Assistance Act, 1956, although the latter will continue in effect in some provinces for an interim period with respect to certain programs that utilize a means test and are being phased out but that are not covered under the Canada Assistance Plan. All provinces had signed agreements under the plan by the end of August 1967, and the Yukon Territory signed in December 1969. The arrangements for contracting out of certain shared-cost programs that were introduced in 1965 under the Established Programs (Interim Arrangements) Act are applied to Quebec's agreement. It is provided that the provinces may discontinue their programs of old age assistance, blind persons allowances and disabled persons allowances and instead give aid under their general programs with costs shared under the plan.

The plan extends federal sharing to include the following costs, which were not shared under the Unemployment Assistance Act; assistance to needy mothers with dependent children, maintenance of children in the care of provincially approved child welfare agencies, health care services to needy persons, and the extension of welfare services to prevent or remove causes of dependency or to assist recipients in achieving self-support. The only eligibility requirement specified is that of need, which is determined through an assessment of budgetary requirements as well as of income and resources. A province must not require previous residence as a condition of eligibility for assistance or for continued assistance; rates of assistance and eligibility requirements are set by the province so that they may be adjusted to local conditions and the needs of special groups; and the provinces must establish procedures for appeal from decisions that relate to the provision of assistance.

The Federal Government reimburses the provinces for 50 p.c. of the cost of assistance provided to persons in need and for 50 p.c. of certain costs of improving or extending welfare services. "Assistance" includes any form of aid to or on behalf of persons in need for the purpose of providing basic requirements such as food, shelter and clothing; items necessary for the safety, well-being or rehabilitation of a person in need, or for a handicapped person; special home care such as a home for the aged, a nursing home or a welfare institution for children; travel and transportation; funerals and burials; health care services; welfare services purchased by or at the request of provincially approved agencies; and comfort allowances for inmates of institutions.

The cost of improving and extending welfare services may be calculated either (1) as the amount by which the cost of providing welfare services exceeds that of the period from Apr. 1, 1964 to Mar. 31, 1965 or (2) as the cost of employing persons who are engaged wholly or mainly in the performance of welfare service functions and who are employed in positions filled after Mar. 31, 1965. Included for shareable purposes are the costs of salaries and employee benefits, travel, research, consultation, fees for conferences and seminars, and certain costs of staff training. The sharing of cost of work activity projects that prepare persons for employment and the extension of provincial welfare services to Indians on reserves, on Crown lands or in unorganized territory are governed by special agreements.

8.—Federal Share of Canada Assistance Plan Costs, by Province, Years Ended Mar. 31, 1969 and 1970

NOTE.—Includes costs of public assistance payments, child welfare maintenance, health care and extensions and improvements in welfare services and also payments made for claims received during the fiscal year for expenditures made in the previous fiscal year.

¹ Compensation is made to Quebec under the terms of the Established Programs (Interim Arrangements) Act. Payments in 1968-69 and 1969-70 amounted to \$149,300,000 and \$156,600,000, respectively.

Subsection 2.—Unemployment Assistance

The Unemployment Assistance Act, 1956—under which the Federal Government was authorized to reimburse a province or territory for 50 p.c. of the assistance expenditures made by that province and its municipalities to unemployed persons and their dependants—remains in effect in the Northwest Territories and, for a transition period, in some provinces to cover certain means-test programs during the process of conversion to needs-test pro-

grams. The federal share of such costs amounted to \$16,700,000 during the year ended Mar. 31, 1969 and to \$14,600,000 in the following fiscal year. This amount includes payment to Quebec under the Established Programs (Interim Arrangements) Act and to the Yukon Territory, whose agreement under the Canada Assistance Plan dates from Dec. 16, 1969 (see p. 383).

Subsection 3.—Old Age Assistance and Blind and Disabled Persons Allowances

Federal reimbursement to the provinces for assistance to blind persons and persons permanently and totally disabled, aged 18 or over, is provided for under the Blind Persons Act, 1951, as amended, and the Disabled Persons Act, 1954, as amended, and, until Jan. 1, 1970, for assistance to persons aged 65 or over under the Old Age Assistance Act, 1951, as amended. To be eligible for an allowance under any of these Acts, an applicant must meet the 10-year residence requirement and the income requirements. Under the Disabled Persons Act and the former Old Age Assistance Act, total income, including the allowance, may not exceed \$1,260 a year for an unmarried person, \$2,220 a year for a married couple or \$2,580 a year for a married couple when the spouse is blind within the meaning of the Blind Persons Act. Under the Blind Persons Act, total income, including the allowance, may not exceed \$1,500 a year for an unmarried person, \$1,980 a year for a person with no spouse but with one or more dependent children, \$2,580 for a married couple and \$2,700 a year for a married couple when the spouse is also blind.

The federal contribution is 50 p.c. of \$75 a month or the allowance paid, whichever is less, for old age assistance and disabled persons allowances, and 75 p.c. of \$75 a month or the allowance paid, whichever is less, for blind persons allowances. The old age assistance program disappeared Jan. 1, 1970, when the eligible age for the old age security pension was lowered to 65 years.

Effective Apr. 1, 1965, Quebec received payment under the terms of the Established Programs (Interim Arrangements) Act.

¹ Excludes Quebec. Effective Jan. 1, 1965 no payments were made to Quebec under these programs; instead, compensation was provided under the Established Programs (Interim Arrangements) Act. If payments had been made under these programs, however, total amounts for 1968-69 would have been increased as follows: old age assistance—\$3,627,851; allowances for the blind—\$1,523,632; and allowances for disabled persons—\$7,952,096.

Under the terms of the Canada Assistance Plan, a province may elect to aid needy persons in these categories under a general assistance program with costs shared under the plan (see p. 384). In accordance with this provision certain provinces no longer accept applications under these programs. By mid-1970, Newfoundland, Prince Edward Island, Nova Scotia, Ontario, Saskatchewan and Alberta had discontinued receipt of applications for disabled persons allowances, and three of these—Ontario, Saskatchewan and Alberta—had also discontinued receipt of applications for blind persons allowances.

Subsection 4.—Fitness and Amateur Sport Program

The Fitness and Amateur Sport Program was inaugurated in 1961 to increase the number of participants at all levels of competitive and non-competitive physical recreation and amateur sport activity ranging from day camps to the Canada Games and the Olympic Games; to help provide the participants with the skills, the means and the opportunity to benefit from recreation; and to help make available to all citizens the facilities and leadership to participate freely in recreational activities of their choice. These objectives are predicated on the assumption that every Canadian should develop a level of fitness sufficient to contribute positively to his physical and mental health and that Canadian athletes should develop a level of performance in national and international competitions which will contribute to national unity and international prestige.

Under the Fitness and Amateur Sport Act, 1961, up to \$5,000,000 a year may be expended to encourage, promote and develop fitness and amateur sport in Canada. A National Advisory Council on Fitness and Amateur Sport, consisting of not more than 30 members appointed by the Governor in Council with at least one from each province, has been set up to consider problems connected with such activity and to advise the Minister of National Health and Welfare thereon.

After consideration of the report of the Task Force on Sports for Canadians, the findings of the Montmorency Conference on Leisure, the recommendations made by the National Advisory Council on Fitness and Amateur Sport, and the conclusions of an internal departmental study, the Minister proposed, in March 1970, a new government sports policy for Canadians. Advocating the benefits of mass participation and the inculcation of sports and recreation into the Canadian culture, the policy aims primarily at reinforcing and increasing the administrative strength of Canadian sports and recreation agencies by providing them with administrative, financial and other professional assistance. The Department operates certain projects of its own and also provides grants for specific projects, all intended to facilitate the development of resources and motivate participation by all Canadians.

The federal program for 1970-71 concentrates on (1) grants and support to national fitness and sport organizations to improve the standards of administration, coaching and instruction, to increase the rate of participation in physical recreation and to provide aid to the holding of competitions (\$2,000,000); (2) promotion and support of special projects including the Arctic Games, the Canada Games and the Canada Fitness Awards, and assistance in the holding of sports events of nation-wide interest (\$1,400,000); (3) planning, training, research and communications in support of increased participation in physical recreation by all Canadians; and (4) grants to provinces (\$500,000)—the cost-sharing agreements with the provinces for fitness and amateur sports programs terminated on Mar. 31, 1970 but this \$500,000 has been allocated to provide for a phase-out period during which new programs will be developed on a joint-project basis.

Subsection 5.—National Welfare Grant Program

The National Welfare Grant Program was established in 1962 to help develop and strengthen welfare services in Canada through a general welfare and professional training grant and a welfare research grant. The variety of provisions within the program, along

with its associated consultative services, allow it to operate as a flexible instrument in the development of welfare services and to give a major emphasis to experimental activities in the welfare field.

The allotment for the year ended Mar. 31, 1970 was \$2,500,000. Provincial governments, municipal welfare departments, non-governmental welfare agencies and citizens' groups, universities and individuals may be the ultimate recipients of project grants under one or more provisions of the program. Most are financed and administered entirely by the Federal Government; others require application through a provincial department of welfare that actually administers the award on a shared-cost basis.

General welfare, bursary, training and staff development grants are available to provinces on a shared-cost basis for projects designed to improve welfare administration, to develop provincial consultative and co-ordinating services, and to strengthen and extend public and voluntary welfare services; for bursaries for full-time graduate training at Canadian schools of social work; and for staff training and development grants for employees of government and voluntary welfare agencies where the costs are not shareable under the Canada Assistance Plan.

The other provisions of the program are administered by the Federal Government. Welfare scholarships are awarded for graduate study in Canadian schools of social work and fellowships for advanced study at Canadian and foreign universities. Teaching and field-instruction grants assist with the development of new Canadian schools of social work and with certain operating costs at existing schools.

Under the welfare research grant, funds are provided for a variety of research projects undertaken by public and voluntary welfare and correctional agencies, universities and research institutions. Grants are available to national voluntary welfare agencies to assist with projects not eligible for support under other provisions of the program. Particular emphasis is given to projects designed to foster planning and co-ordination.

Effective Apr. 1, 1967, a mental retardation grant was established for a five-year period and is being administered in conjunction with the National Welfare Grant Program. It supports research and demonstration projects designed to expand knowledge and to apply that knowledge to the provision of services and to preventive programs in that field.

Expenditures under the National Welfare Grant Program for the year ended Mar. 31, 1970 totalled \$1,924,541 and under the Mental Retardation Grant, \$288,171. Of the former, \$334,671 was expended on research projects; \$636,071 on teaching and field instruction, welfare scholarships and fellowships; \$215,815 on national agency projects; and \$737,984 on welfare demonstration and general welfare projects, including provincially administered bursary and staff development programs.

Subsection 6.—Vocational Rehabilitation

The federal-provincial vocational rehabilitation program, which began in 1952, was consolidated and extended under the Vocational Rehabilitation of Disabled Persons Act, 1961. Agreements under this Act provide for equal sharing of costs between the Federal Government and the provinces. These costs include co-ordination and provision of services to disabled or other vocationally disadvantaged individuals, training of rehabilitation personnel, and research and publicity. Approved services supplied by a provincial government or purchased from voluntary agencies by a provincial government include medical, social and vocational assessment, intensive counselling, restorative services, the provision of prostheses, vocational or educational upgrading, rehabilitation allowances, work conditioning, and provision of tools, books and other equipment. Employment counselling and placement are provided through the Canada Manpower Centres of the Department of Manpower and Immigration or by the voluntary agencies from which services are purchased.

In each participating province, a provincial co-ordinator or director of rehabilitation is responsible for the co-ordination and administration of services to disabled or vocationally

disadvantaged persons. The federal aspects of the program are administered by the Manpower Utilization Branch of the Department of Manpower and Immigration in co-operation with the Department's five regional offices. The Manpower Utilization Branch, through its section on Older Workers, also has the function of encouraging a more favourable employment climate for older workers through a continuing educational program, encouragement of research, maintenance of liaison with management, labour and voluntary agencies, assembly and dissemination of informational material concerning industrial gerontology, and supportive services to the Canada Manpower Centres. Among other agencies contributing to vocational rehabilitation are the Workmen's Compensation Boards in all provinces, which provide for the rehabilitation of injured workmen.

In the year ended Mar. 31, 1969, federal expenditures under the vocational rehabilitation program totalled \$3,680,000. Reports received on 3,066 disabled or vocationally disadvantaged persons rehabilitated during the year indicated that, at the end of the year, 2,224 of them were rehabilitated to employment and 842 were seeking employment or were rehabilitated to self-care at home. Before rehabilitation, the cost of support of the 2,224 who obtained employment and of their dependants was estimated at \$2,000,000 annually; following rehabilitation, their aggregate earnings were estimated at almost \$8,800,000.

Section 3.—Provincial Welfare Programs

Major welfare programs governed by provincial legislation include social assistance, services for the aged and child welfare services. Also, the Province of Quebec operates the Quebec Pension Plan, which is comparable to the Canada Pension Plan (see p. 374), and a family allowance program (see p. 381). Provincial departments of public welfare are responsible for the administration of welfare programs, although administration of certain of them may be shared with their municipalities.

Public services are supplemented by those of voluntary agencies whose interests include the welfare of families and children and of groups with special needs, such as the aged, recent immigrants, youth groups, and released prisoners. Welfare councils and social planning councils contribute to the planning and co-ordinating of local welfare services. Local voluntary agencies and institutions may receive public grants, depending on the nature and standard of their services, although their main support is usually from United Appeal funds or from sponsoring organizations.

Subsection 1.—Social Assistance

All provinces make legislative provision for assistance to persons in need and their dependants. All provinces have incorporated provisions for allowances to needy mothers with dependent children in a broadened program of provincial allowances to several categories of persons with long-term need or in a general program under which the only eligibility requirement is need, irrespective of the cause of need.

In addition to allowances to cover items of basic need, such as food, clothing, shelter, fuel and utilities, all provinces make provision for such special items as rehabilitation services, expenses incidental to education or obtaining employment, counselling, homemaker services and institutional care. The provinces are reimbursed by the Federal Government under the Canada Assistance Plan for 50 p.c. of the costs of assistance and of certain welfare services given by the provincial and municipal authorities (see p. 384). The provincial departments of welfare set rates of assistance and conditions of eligibility; they have regulatory and supervisory powers over municipal administration of assistance, and require certain standards as a condition of provincial aid. Length of residence is not a condition of aid in any province, but municipal residence may determine the financially responsible authority. The provincial authority takes responsibility for aid in unorganized areas within the province and for persons who lack municipal residence.

The administration of assistance varies. In five provinces allowances to persons with long-term need, such as needy mothers with dependent children, disabled persons and the aged, are administered by the province and other allowances are administered by the municipalities. In Newfoundland and New Brunswick, all assistance is administered by the provincial authority. In Prince Edward Island, assistance is administered by the province and two of the larger municipalities. In Saskatchewan, social assistance is administered by the province except in two municipalities which elected to retain responsibility for administration of the program. In British Columbia, a comprehensive program of general assistance is administered by the local authority, i.e., by the municipalities except in sparsely populated municipalities and in areas without municipal organization where aid is administered by the province; the province also administers a program of supplementary allowances to needy recipients of old age security pensions and the two federal-provincial categorical allowances. In the eight provinces where the municipalities have some administrative responsibility, the proportion of the costs of aid borne by the province varies from 40 p.c. to 100 p.c.

Subsection 2.—Living Accommodation for Elderly Persons

In all provinces, homes for the aged and infirm are provided under provincial, municipal or voluntary auspices. These homes are required to meet standards set out in provincial legislation relating to homes for the aged, welfare institutions or public health. Voluntary homes are usually provincially inspected and in some provinces must be licensed.

All provinces in varying degrees make capital grants toward the construction or renovation of homes for the aged by municipalities or voluntary organizations and, generally speaking, such homes are exempt from municipal taxation. Some provinces also make provision for capital grants to municipalities, charitable organizations or non-profit corporations for the construction of low-rental housing for elderly persons. These projects are usually built under Sect. 16 of the National Housing Act, which provides for long-term low-interest loans to non-profit corporations constructing low-rental self-contained or hostel accommodation for older people. Units for the aged may also be included in low-rental public housing projects for families, built under Sect. 35 of the Act.

In some provinces efforts are made to place well, elderly people in small proprietary boarding homes. Those who are chronically ill may be cared for in chronic or convalescent hospitals, private or public nursing homes and some homes for the aged. All provinces contribute to the maintenance of needy persons in homes for the aged or other homes for special care, and these costs are shared by the Federal Government under the Canada Assistance Plan (see pp. 383-384).

Subsection 3.—Child Welfare Services

Child welfare services, which include child protection and care, services for unmarried parents and adoption services, are provided in all provinces under provincial legislation. The programs are administered by the provincial authority or by local children's aid societies (voluntary agencies with boards of directors, operating under charter and under the general supervision of provincial departments). In Newfoundland, Prince Edward Island, New Brunswick, Saskatchewan and Alberta, child welfare services are administered by the province; in Quebec, they are administered by recognized voluntary agencies and institutions, religious and secular; in Ontario, a network of local children's aid societies is responsible for the services; in Nova Scotia, Manitoba and British Columbia, services are administered by local children's aid societies in the heavily populated areas and by the province elsewhere.

Children's aid societies and the recognized agencies in Quebec receive substantial provincial grants and sometimes municipal grants and in many areas they also receive support from private subscriptions or from United Appeal funds. The costs of certain

services and maintenance costs for children in care of a voluntary or public agency are shareable with the Federal Government under the Canada Assistance Plan (pp. 383-384).

Child welfare agencies, provincial or voluntary, have the authority to investigate cases of alleged neglect and, if necessary, to apprehend a child and to bring the case before a judge upon whom rests the responsibility of deciding whether in fact the child is neglected. When neglect is proved, the court may direct that the child be returned to his parent or parents under supervision, or be made a ward of the province or a children's aid society. Services are provided as appropriate and include services to children in their own homes, care in foster boarding homes or adoption homes or, for children who need it, in selected institutions. Children placed for adoption may be wards or they may be placed on the written consent of the parent. Adoptions, including those arranged privately, number about 18,000 annually.

Child welfare agencies make use of the small selective institution for placement of children who are forced to be away from their own homes for a short period or who may need preparation for placement in foster homes, and emphasis is increasingly being placed on group-living homes. The development of small, highly specialized institutions, which function as treatment centres for emotionally disturbed children, is of particular significance. Institutions for children are governed by provincial child welfare legislation and by provincial or municipal public health regulations; they are generally subject to inspection and in some provinces to licensing.

Services to unmarried parents include casework services to the mother and possibly to the father, legal assistance in obtaining support for the child from the father, and foster-home care or adoption services for the child. Support for unmarried mothers may be obtained under general assistance programs. In many centres, homes for unmarried mothers are operated under private or religious auspices.

Day nurseries for the children of working mothers are established only in the larger centres. These are chiefly under voluntary auspices, except in Ontario, where there are also municipally sponsored day nurseries operated with the aid of provincial grants.

Subsection 4.—Newfoundland's Schooling Allowances Program

The Province of Newfoundland introduced its Parents' Supplement (Schooling Allowance) program in 1966. Under this scheme, an annual benefit of \$15 is paid in semi-annual instalments for each eligible child who is registered at and attending a school other than a trade school or university. There is no age limit specified in the legislation but the allowance terminates when the child leaves school.

Subsection 5.—Quebec's Family Allowances Program

The Province of Quebec introduced its own family allowances program under legislation enacted in 1967. Under this plan, the following allowances are paid at the end of each six-month period to persons satisfying the relationship and residence requirements in respect of children under 16 years of age: \$15 for one child, \$32.50 for two children, \$52.50 for three children, \$77.50 for four, \$107.50 for five, \$142.50 for six, and an extra \$35 for each child after the sixth. These allowances are increased by \$5 for each child between the ages of 12 and 16 years. To qualify for the allowances, children must be attending school regularly from the time when they are first required to do so, unless prevented by physical or mental infirmity. These allowances supplement those paid under the federal scheme.

Section 4.—Emergency Welfare Services

The function of the Emergency Welfare Services Division of the Department of National Health and Welfare is to develop community capability to provide, in the event of a national emergency, essential welfare services not available through established welfare

agencies. A 1959 Order in Council set up five emergency welfare services—emergency clothing, emergency feeding, emergency lodging, registration and inquiry, and personal services—and gave the Division responsibility for the continuation of welfare departments in support of rehabilitation and recovery. To these ends, policy has been defined, systems designed and, at all levels of government, welfare resources planned.

In peacetime, trained specialists within the federal, provincial and municipal departments of welfare, organized nationally, are responsible for developing an emergency welfare capability. The program is an integral part of the Canada Survival Plan and is co-ordinated with the programs of other Canadian Government agencies and with mutual support programs of the United States Department of Health, Education and Welfare. Leaders are being trained in the art of organizing large numbers of volunteers for emergency welfare operations and a public education program is being maintained. Special printed forms and equipment for survival, not regularly available through commercial sources, have been produced and are located strategically across Canada.

Section 5.—International Welfare and Social Security*

Canada is actively involved in the social welfare and social development activities of the United Nations and its specialized agencies and of various international voluntary organizations. At the United Nations, Canada is represented on the Commission for Social Development, is a member of the Executive Board of the United Nations Children's Fund and participates actively in the International Council on Social Welfare, the International Social Security Association and other international agencies concerned with the social aspects of development.

Under the program of the Canadian International Development Agency, Canada supports a number of social welfare projects in developing regions and provides social work and social welfare training for foreign students recommended by their governments. The necessary technical services to the bilateral and multilateral aid programs in this sector are supplied by the Department of National Health and Welfare, which works closely with several Canadian voluntary organizations engaged in social development.

Canada is in the course of negotiating reciprocal agreements on social security with other countries, commencing with West Germany. Canadian agencies employed in social security participate in the program of the International Social Security Association and the social security program of the International Labour Organization. For some years, Canada has been represented, as an observer, at the meetings of the Inter-American Social Security Association.

PART III.—HEALTH AND SOCIAL WELFARE EXPENDITURES

Section 1.—Government Expenditures on Health and Social Welfare

In the years ended Mar. 31, 1962-69, expenditures by all levels of government on health and social welfare rose from \$3,689,200,000 to an estimated high of \$7,270,000,000, an almost twofold increase. If these figures are adjusted to take account of growth in population, the increase in per capita expenditures—from \$201 to \$350—was about 75 p.c. Government expenditures may also be measured in relation to major economic indicators; on this basis, annual government expenditures on health and social welfare over the period remained relatively stable, fluctuating between 12.4 p.c. and 13.1 p.c. of net national income and between 9.2 p.c. and 9.9 p.c. of gross national product.

The federal share of health and social welfare expenditures fell from 69.9 p.c. in 1961-62 to 60.7 p.c. in 1968-69, the provincial share rose from 27.2 p.c. to 37.1 p.c. and municipal

* See also pp. 187-189.

EXPENDITURE ON HEALTH AND SOCIAL WELFARE
BY ALL LEVELS OF GOVERNMENT,
YEARS ENDED MAR. 31, 1950-69

outlays declined from 2.9 p.c. to 2.2 p.c. Compared with 1967-68, health and social welfare expenditures by all levels of government increased by \$820,000,000 or nearly 13 p.c. This may be compared to the rise of \$1,066,200,000 or 20 p.c. in 1967-68 over 1966-67. Expenditures in both the federal and provincial fields increased by the same proportion—approximately 12.7 p.c. The main items causing this rise included: higher disbursements under the old age security and guaranteed income supplement programs principally because of the lowering of the eligible age and increase in the monthly benefits paid; greater expenditures incurred by the introduction of the Canada Assistance Plan which is wider in scope than the categorical programs it is intended to replace; higher expenditures under the Unemployment Insurance Act; greater outlays on behalf of health and welfare for the Indian and Eskimo populations; increasing expenditures under the Hospital Insurance and Diagnostic Services Act; and contributions to the provinces under the Health and Hospital Construction Grants and the new Health Resources Fund Act.

The relative federal declines, compared to provincial gains in recent years, have been caused to a substantial degree by increasing hospital expenditures by the provincial government augmented by the effect of the "opting-out" arrangements made available to the provinces. Under the Established Programs (Interim Arrangements) Act, a province may choose to receive contributions from the Federal Government in the form of a tax abatement and an equalization payment in lieu of a direct federal contribution under the program. The opting-out arrangements have the effect, in this presentation, of showing an increase in provincial government expenditures while the federal fiscal payment is treated not as an expenditure but as a transfer payment. Thus, provincial expenditures include gross outlays by Quebec whereas federal expenditures on health and social welfare do not include the large sums paid or transferred to that province under the Established Programs (Interim Arrangements) Act and other fiscal arrangements. The share of the Federal

Government in total health and social welfare expenditures by all levels of government showed a steady decline from year to year up to 1967-68, but in 1968-69 this trend was reversed.

The proportion of government expenditures on health and social welfare taken up by health programs continues to grow; in 1961-62 such programs accounted for \$1,126,000,000 or 30 p.c. of the total and in 1968-69 they amounted to \$2,779,000,000 or 38 p.c.

An outline of the principal federal income maintenance programs for 1968-69 shows the magnitude of the major programs and services—family allowances payments amounted to \$560,000,000, old age security payments to \$1,297,000,000 plus another \$244,000,000 under the guaranteed income supplement program, unemployment insurance benefits to \$459,000,000 and veterans pensions and allowances to \$223,000,000 and \$102,000,000, respectively. In addition, payments under the youth allowances program, which commenced in September 1964, amounted to \$52,000,000 excluding the Province of Quebec. That province had instituted a program of schooling allowances three years prior to the

EXPENDITURE ON HEALTH AND SOCIAL WELFARE BY ALL LEVELS OF GOVERNMENT WITH PERCENTAGES OF TOTAL GOVERNMENT EXPENDITURE, NET NATIONAL INCOME AND GROSS NATIONAL PRODUCT, YEARS ENDED MAR. 31, 1955-69

introduction of the federal program and this necessitated a special arrangement whereby Quebec continued its program but with appropriate fiscal reimbursement from the Federal Government. In 1967-68, Quebec inaugurated its own family allowances program supplementing the federal scheme (see p. 390).

Federal-provincial income-maintenance programs in 1968-69 required expenditures of \$3,400,000 for old age assistance, \$2,100,000 for blindness allowances, \$6,400,000 for disabled persons allowances and \$1,000,000 for unemployment assistance, the latter including some municipal expenditures. The smallness of these amounts indicates the effectiveness of the Canada Assistance Plan, for which this was the third year of operation and which was intended to replace all activities under those programs at the option of each province (see pp. 383-384). In 1965 Quebec withdrew from these federal-provincial programs under the Established Programs (Interim Arrangements) Act, which entitled that province to a tax abatement and an equalization payment. Canada Assistance Plan expenditures in 1968-69 were \$257,000,000. Provincial Workmen's Compensation Boards spent \$177,000,000 on cash benefits for pensions and compensation. Welfare services for Indians and for veterans and the national employment services accounted for \$104,000,000 at the federal level.

In the field of health, federal grants to the provinces under the Hospital Insurance and Diagnostic Services Act totalled \$562,000,000 and grants for hospital construction and general health grants to the provinces and municipalities amounted to \$44,000,000. The Federal Government spent \$44,000,000 on its Indian and northern health services and \$72,000,000 on hospital and treatment services for veterans. Provincial expenditures on hospital care were estimated at \$1,415,000,000 and expenditures on other health services at \$350,000,000. In addition, provincial Workmen's Compensation Boards paid \$62,000,000 for medical aid and hospitalization, and municipal governments spent an estimated \$89,000,000 on health.

Section 2.—Expenditures on Personal Health Care

Expenditures on personal health care comprise expenditures of hospitals, earnings of physicians and dentists for professional services to their patients, and the value of prescription sales through retail pharmacies. They exclude the amount that private nurses, chiropractors, osteopaths and optometrists receive for their professional services as well as expenditures on public health, capital costs (buildings and interest) and administration costs of public health programs and of insurance plans.

Table 2 shows the components for each year from 1957 to 1969. Canadians spent a total of \$3,924,700,000 on personal health care in 1969, almost three times as much as in 1957. Expressed as a proportion of the gross national product, personal health care expenditures rose from 3.2 p.c. in 1957 to 5.0 p.c. in 1969. Expenditure per person over the same period changed from \$62.81 to \$186.10.

2.—Expenditures on Personal Health Care, 1957-69

PART IV.—NATIONAL VOLUNTARY HEALTH AND WELFARE ACTIVITIES

A number of national voluntary agencies carry on important work in the provision of health and welfare services, medical research, and education. These agencies, some of which are described below, complement the services of the federal and provincial authorities in many fields, and play leading roles in stimulating public awareness of health and welfare needs and in promoting action to meet them.

The Canadian Arthritis and Rheumatism Society.—This agency, organized in 1948, with head office in Toronto, provides research, treatment and education in rheumatic diseases. It has assisted many general hospitals to establish arthritis clinics and during the past decade has supported the development of nine rheumatic disease in-patient units in teaching hospitals in five provinces. Organized under eight provincial divisions and local branches in most towns, this organization attempts to meet special needs of arthritic patients not covered by hospital or medical insurance plans. It provides home physiotherapy in larger cities and mobile consultation services to patients and doctors in rural areas. An Arthritis Centre opened by the Society in Vancouver in 1969 provides a comprehensive program of services to ambulant patients, employing up-to-date evaluative techniques in occupational therapy and physiotherapy, combined clinical assessment of patients by surgeons, physicians and other members of the treatment team and also serving as an education unit for health service personnel.

Of a budget of \$2,350,000 in 1968, the Society directed one quarter to research and the support of rheumatic disease units, and 55 p.c. to the provision of treatment services. Public donations are the chief source of funds, including independent campaigns and United Appeals.

The Canadian Association for the Mentally Retarded.—This Association was incorporated in 1958 to co-ordinate the work of organizations serving the mentally retarded, who are estimated to number about 630,000 or 3 p.c. of the population. The Association is represented by ten provincial and more than 300 local groups. It offers special classes and sheltered workshops for trainable retarded children and adults, assessment clinics, activity centres, summer camps and other recreational programs. Its affiliate, the National Institute for Mental Retardation, is a clearinghouse for information on mental retardation and, in co-operation with other organizations and with governments, is developing a nation-wide research and demonstration program. A widely publicized event in the 1969 program was the Canadian Special Olympics for the Mentally Retarded held in Toronto.

Financial support comes from local fund-raising campaigns, United Appeals, the sale of special Christmas cards and, in varying degree, from provincial and municipal governments, including departments of education. The national office is in Toronto.

The Canadian Cancer Society.—This agency, with the active encouragement of the Canadian Medical Association, was organized as a cancer study unit and incorporated in 1938, operating in all provinces from its national office in Toronto. It offers public education and services not otherwise available for cancer patients, principally transportation, home nursing, boarding and nursing home care, sickroom supplies and dressings. Research into the causes and treatment of cancer in 1970 accounted for \$4,062,629, or over 50 p.c. of the expenditure of the Society. The Society is the principal fund-raiser for its affiliate, the National Cancer Institute of Canada, providing more than 90 p.c. of the Institute's 1969 budget of over \$4,000,000. The Canadian Cancer Society sponsors fellowships in cancer research for advanced students and provides capital funds for research facilities.

The Canadian Cystic Fibrosis Foundation.—This national agency, organized in 1960 with head office in Toronto, operates in most provinces and has 30 affiliated local chapters. Because cystic fibrosis is believed present in one of every 1,000 babies born in

North America, the Foundation seeks to promote special services for patients as well as research, professional training and public understanding concerning cystic fibrosis. A valuable source of publicity and research funds has been the annual "Shinerama" in which 40 Canadian colleges and universities participated in 1969, raising \$120,102. The agency supports the International Association which is composed of 22 member nations.

The Canadian Diabetic Association.—The Association, formed in 1953 with headquarters in Toronto, has 38 branches in nine provinces and a French-language affiliate, l'Association du Diabète, in Quebec. It is affiliated with the Canadian Medical Association and the Canadian Dietetic Association. Its aims are to co-ordinate the efforts of individuals and organized bodies with a view to reducing the morbidity and mortality rates from diabetes and to provide an authoritative and advisory organization for the benefit and service of diabetics.

The Association estimates that 2.5 p.c. of the population is diabetic but that more than half of the diabetics are unaware of their illness. The Association seeks through its public information programs to help diabetics identify their illness at an early stage. One method in current use is a multi-screening technique that simultaneously tests for the presence of diabetes, tuberculosis, anaemia and glaucoma. The Association also provides diet counselling, summer camps for children, aid to diabetic senior citizens, education and information services, and diabetic treatment centres. Research into the nature and treatment of diabetes includes the Family Tree Research Program. The Association publishes a quarterly bulletin, the *Canadian Diabetic Association Newsletter*.

The Canadian Hearing Society.—Organized in 1940 as the National Society of the Deaf and the Hard of Hearing, the Society has offices in Toronto, Ottawa, London, Hamilton and Montreal. It is concerned with the preservation of hearing, the treatment of deafness, and the rehabilitation of those with impaired hearing, including war veterans and children. It provides hearing examinations, counselling, vocational guidance and job placement services for the deaf or hard-of-hearing, and hearing aids to persons in need, and works closely with schools for the deaf. The Society publishes *The Canadian Hearing Review* and other educational material available for the public.

Canadian Heart Foundation.—The Canadian Heart Foundation with headquarters in Ottawa was formed by physicians in 1956 "to co-ordinate and correlate the efforts of organizations and individuals interested in heart diseases with a view to reducing the morbidity and mortality therefrom in Canada". It has developed into a federation of six affiliated provincial heart foundations together with four provincial divisions of the Canada Foundation in the Atlantic Provinces. Their programs are concerned primarily with the support of cardiovascular research in Canadian universities and hospitals and they also support travelling lectureships by scientists and educational programs for the health professions and the general public. Over 70 p.c. of the resources of the Foundation are disbursed in the form of research fellowships and grants-in-aid which amounted to \$15,000,000 in the past ten years and to over \$2,500,000 in 1969-70. The major source of funds is the annual Canadian Heart Fund campaign.

Canadian Medic-Alert Foundation.—This international foundation had its beginnings in California in 1956; the Canadian affiliate was organized in 1961, with head office in Toronto. Its main purpose is to educate and encourage the public to wear Medic-Alert identification discs stipulating medical problems that should be known of in an emergency. The Foundation estimates that one person in each family has a medical problem that should be identified, such as sensitivity to certain drugs, a heart condition, diabetes, epilepsy, or an uncommon blood type. A recently added feature is the identification of the bearer as a possible transplant-donor. The wearing of the disc enables such a person to receive correct treatment if, for example, he should be unconscious when he reaches hospital. The medical history of each disc-wearer is filed in Toronto and in Tuloch, California; discs

carry emergency telephone numbers through which this information can be obtained at any hour. Canadian membership is currently estimated at 40,000. The Foundation is financed by lifetime membership fees (\$7) and by donations.

The Canadian Mental Health Association.—The national body of this Association, established in 1918 and legally incorporated in 1927, has its head office in Toronto, divisions in all provinces, and nearly 200 local branches and committees. The national office is financed by United Appeals, government grants, support from provincial divisions, and donations. The Association's objectives are to improve public understanding of and attitudes toward mental illness and the mentally ill, and to improve existing preventive and treatment services. It is estimated that one in every eight Canadians will be treated for psychiatric illness during his lifetime.

The Association performs research and technical studies related to mental illness, undertakes social and community action to improve legislation and governmental programs, conducts industrial rehabilitation workshops, provides volunteer services to patients both during and after their stay in hospital, and provides public and professional education about mental health and mental illness. Among special services provided by volunteers are the 42 White Cross Centres, social clubs to assist former patients who have difficulty coping with a feeling of social isolation. Four summer camps are operated for patients. The Association administers the C. M. Hincks Research Fund which enables general practitioners to take a month of special training in psychiatry. Publications resulting from research studies sponsored by the Association include *More for the Mind*, *The Law and Mental Disorder*, *Mental Health and Public Health*, and *University Student Unrest*.

The Canadian National Institute for the Blind.—This agency was incorporated in 1918 "to carry out all operations which shall be deemed advantageous throughout Canada for the welfare of the blind" and "to take measures and adopt every possible means for the conservation of sight". To this end, services are provided through a national office in Toronto, eight divisions covering all provinces, and 50 sub-district offices. United Appeals and private donations are the major sources of income.

In 1969, services were provided to 21,291 of the 27,184 blind persons registered with the Institute, including educational and vocational assistance, home teaching and employment, eye services, mobility training, recreation, special services to children and youths, and social services. Services provided to 8,175 other persons registered as "prevention" cases included eye examinations, medical treatment, glasses or artificial eyes, transportation and maintenance. Services are given free.

The Institute supports the operation of the Arthur V. Weir Training and Vocational Guidance Centre for advanced professional and technical training in Toronto and Low Vision Aid Clinics and Eye Banks in major cities. It does not directly conduct research programs but supports research through the E. A. Baker Foundation and provides funds for grants, bursaries and fellowships (some \$43,000 in 1968) to be used for training of professionals in blindness prevention. The National Library of the Institute is continually expanding its disc and tape talking-book stock.

The Canadian Paraplegic Association.—The Association was formed in 1945 by a group of paraplegic veterans of World War II to assist with the re-establishment of paraplegics in the community. Through its head office in Toronto and seven divisions serving other areas in Canada, the Association provides treatment and rehabilitation facilities, including prostheses and personal aids, for persons suffering paralysis and carries out educational and research activities in related areas. In Toronto, a comprehensive treatment service is available at Lyndhurst Lodge Hospital and elsewhere service is arranged with other hospitals and rehabilitation agencies.

The divisional offices have led local campaigns to remove architectural barriers that hamper the physically handicapped in using community services and facilities and reduce

their opportunity for vocational rehabilitation and employment. To overcome these difficulties, the National Research Council published *Building Standards for the Handicapped, 1965*, a supplement to the National Building Code. It is estimated that one in seven Canadians will have to cope with this problem at some period, as a result of physical handicap, temporary disability or age. A stylized wheelchair symbol was adopted at the 1969 World Congress of the International Society for the Disabled to designate buildings that are accessible to the handicapped.

The Canadian Paraplegic Association is supported primarily by public donations but also by grants from United Appeal funds and federal, provincial and municipal governments, and by fees from patients. The agency publishes a regular information bulletin, *Caliper*.

The Canadian Red Cross Society.—The Canadian Red Cross Society, established in 1896, is the largest voluntary organization operating in the fields of health and welfare. In line with its objectives, "in time of peace or war, to carry on and assist in work for the improvement of health, the prevention of disease and the mitigation of suffering throughout the world", the Society operates 22 programs including a national blood-transfusion service, hospital and nursing stations in isolated areas (34 in 1968), home nursing, home-maker and sick-room supply services, and the Red Cross youth programs which seek to promote understanding of and assistance to needy children everywhere.

The Red Cross blood-transfusion service held over 6,500 clinics in 1968. In addition, the Society is a member of the international rare-blood donor service; of the 340 donors called upon for donations by that service in 1968, 139 were Canadians. Welfare recipients were given instruction in nutrition, purchasing and basic sewing in addition to home nursing service. Women's work programs shipped new clothing and layettes valued at \$488,000 to 24 countries in 1968, as well as articles of clothing and surgical dressings to Red Cross hospitals in Canada. Red Cross youth programs assisted needy Canadian children at a cost of almost \$200,000 in 1968, donating funds for medical treatment, heart surgery, prosthetic appliances, dental care, including provision of three mobile dental coaches and support of eight dental clinics, and speech therapy and kindergartens for the deaf. In addition, youth programs extended assistance to children in other countries totalling some \$120,000. The Red Cross as a whole extended overseas aid amounting to \$1,500,000.

Chief sources of funds for the work of the Canadian Red Cross are United Appeals, government grants and annual Red Cross campaigns.

The Canadian Rehabilitation Council for the Disabled.—This agency was founded in 1962 by the merging of the Canadian Foundation for Poliomyelitis and the Canadian Council for Crippled Children and Adults. The Council promotes co-operation among agencies assisting the rehabilitation of disabled persons, such as the national agencies for cerebral palsy, hemophilia and cystic fibrosis and provincial councils for the disabled, and offers consultative services, public education, and training courses and seminars for rehabilitation workers. Its head office is in Toronto. The Council is affiliated with the International Society for Rehabilitation of the Disabled and the Canadian Medical Association. Its official publication is the *Rehabilitation Digest*.

In the smaller provinces the two founding organizations have merged their programs but in British Columbia, Ontario and Quebec, separate societies for handicapped children continue to administer case-finding, restorative and related services including parent counselling, camping and recreation, and finance the programs through Easter Seal campaigns. The foundations for the disabled in the three larger provinces, which are financed by the March of Dimes or United Appeals, provide services to disabled adults, placing more emphasis upon vocational rehabilitation and the establishment of sheltered workshops.

The Canada Safety Council.—This organization was established in 1968 by the merger of three organizations—the Canadian Highway Safety Council, the National Safety League of Canada and the Canadian Industrial Safety Association. The head office of the

Council is in Ottawa. Its goal is to prevent accidents and thereby save lives and reduce injury and suffering. The Council estimates that over 11,000 Canadians die accidentally each year and that hundreds of thousands are seriously injured. The Council provides training courses related to safety, such as driver training, defensive driving, high school driver education, and baby-sitter training. Public education projects include Safe Driving Week, Fire Prevention Week, Child Safety Week, Farm Safety Week, safety-belt campaigns, car-check campaigns, and pedestrian-cyclist safety campaigns. Funds are obtained from federal and provincial government grants, business and industry, national labour organizations, provincial motor leagues, and automobile associations.

The Canadian Tuberculosis and Respiratory Disease Association.—This agency was founded in 1900 for "the prevention of consumption and other forms of tuberculosis in Canada". Along with its medical arm—the Canadian Thoracic Society established in 1960—the Association has extended its work to cover all respiratory illnesses. The national office in Ottawa and the ten provincial and numerous local branches co-operate with public health agencies in promoting special programs including public and professional education, prevention, diagnosis, treatment and rehabilitation. Consultation services are provided for federal and provincial health departments. The case-finding program of the Association is carried out at the local level using mass X-ray screening surveys directed in particular at high-risk groups.

In the fields of research and professional education, the Association distributes an estimated \$484,000 annually. It also supports actively the efforts of the International Union Against Tuberculosis in less developed countries where tuberculosis is a serious problem.

The Canadian Welfare Council.—The Council, established in 1920, seeks to give leadership on matters concerning the social welfare of Canadians. Member organizations include community funds and councils, other private social agencies, various federal, provincial and municipal departments, and citizen groups and individuals active in the fields of health, welfare and recreation. It furnishes information, technical consultation and field services in the main areas of social welfare and provides a means of co-operative planning and action by public and private agencies. It directs attention to changing social needs and proposes new policies and services in these areas. Through public education programs, it informs the public and political bodies on problems, policies and objectives of social welfare services including health programs.

The policies and programs of the Council are determined by its members under the leadership of a nationally representative board of governors. With professional staff assuming executive functions, the members work together through Divisions of Family and Child Welfare, Public Welfare, Corrections, Community Funds and Councils, and Aging, and through special committees.

The Council's current research studies include the first Canadian survey of visiting homemaker services and a national study of day-care centres for children. The Council publishes the periodicals *Canadian Welfare*, *Bien-Être Social Canadien*, *The Canadian Journal of Corrections*, and a directory of Canadian welfare services. Funds to support its programs are derived mainly from United Appeals, membership fees, individual donations and government grants.

The Health League of Canada.—This agency, established in 1919 as the National Committee for Combatting Venereal Disease, is dedicated to the education of the Canadian public on matters of public health, both in prevention and in early recognition of disease, thereby improving the health standards of Canadians. It has dealt with immunization, fluoridation of water, gerontology, nutrition, and child and maternal health. In 1952, it was appointed the Canadian Citizen's Committee of the World Health Organization. The League publishes the magazine *Health*, which contains articles by professional health workers, and sponsors National Health Week and National Immunization Week. It is

financed by government grants, voluntary donations, and membership fees. In co-operation with its affiliates in Quebec City and Montreal, the League administers its programs from the national office in Toronto.

The Multiple Sclerosis Society of Canada.—The Society was organized in 1948 to support medical research into the causes and treatment of multiple sclerosis. In 1968-69 its research expenditures reached \$103,000, a record high. Through its head office in Toronto and five divisions and local chapters located in ten provinces, the Society attempts, in co-operation with other agencies serving the disabled, to meet the special needs of patients with multiple sclerosis. A survey in Toronto in 1968 demonstrated that these needs, as expressed by patients and their families, were often more social than financial. To improve services to patients, several Ladies' Associations for Multiple Sclerosis have been organized, and some local chapters have begun patient registries. The Society also provides public education and information services, including the quarterly bulletin *Multiple Sclerosis*.

Funds for support of its programs come from bequests and grants, donations, United Appeals, and various other projects. The Society is a member of the International Federation of Multiple Sclerosis Societies, through which affiliation research of projects is co-ordinated and information on new developments is exchanged.

The Muscular Dystrophy Association of Canada.—This Association was organized in 1954 to increase knowledge of muscular dystrophy, to improve facilities for diagnosis and treatment, and to foster research with the aim of developing more successful treatment. The national office is in Toronto and there are local chapters located in 15 major cities. Of the estimated 10,000 Canadians suffering from muscular dystrophy, about one quarter are enrolled with the Association. It supports seven muscular dystrophy clinics and provides limited physiotherapy, certain orthopaedic devices and wheelchairs, and transportation to schools and clinics. Increasing emphasis is being placed on genetic counselling services.

Independent campaigns carried out with the assistance of local firemen provide most of the revenue, augmented by United Appeal funds and grants from municipal and provincial governments. Most of the funds are used for grants for medical research; 70 studies were assisted in 1968-69, both in Canada and abroad, at a cost of \$715,544.

The National Cancer Institute of Canada.—This agency was organized in 1947 to support and co-ordinate research on cancer, promote professional education in cancer, compile and interpret cancer statistics, and assist in the co-ordination of provincial cancer control programs. Full-time research positions for over 30 scientists have been established, and capital grants to six universities have facilitated the construction of laboratory space for cancer research. Of the total annual budget, 90 p.c. (about \$3,800,000 in 1970) is allocated to research, while most of the remainder provides training in cancer research. Under an agreement with the Canadian Cancer Society with which it is affiliated, the Institute does not appeal to the public for funds. Its main sources of income are the Canadian Cancer Society and federal and provincial grants.

The St. John Ambulance Association.—The Order of the Hospital of St. John of Jerusalem held its earliest recorded first-aid course in Canada in Quebec in 1883. Incorporated on a national basis in 1914 with headquarters in Ottawa, the organization operates through ten provincial Councils and seven "Special Centres". The Order is composed of two sections—the St. John Ambulance Association and the St. John Ambulance Brigade. The objectives of the Association are to provide training in first-aid, home nursing and child care, in 1969 reaching 130,000 trainees. The Brigade provides emergency services to the public through uniformed volunteer members numbering about 12,000.

Courses of instruction are made available to the general public, police, firefighters, industry, the armed forces, schools, civil defence and youth organizations. Emergency services provided include two-way radio equipment, emergency oxygen supplies, motor boats and underwater gear, ski and snowshoe patrols, and highway first-aid posts. The

two-hour "save-a-life" program teaches artificial respiration methods to an estimated 150,000 persons annually. Bursaries to nurses-in-training have amounted to \$36,000 in the past seven years.

Funds are obtained from private donations, United Appeals, the sale of textbooks and other publications, and fees for training government personnel. Publications include *The St. John News*, films, and radio and television scripts. In 1969, the Association received \$900,000 from the general public, industry and various levels of government in support of its work.

The Victorian Order of Nurses.—The basic function of this organization, created in 1897, is to provide nursing services in the home. In 1970, the VON directed 16 co-ordinated home-care programs and participated in 11 additional such programs by supplying either the nurse-administrator or the nursing service. Through 107 branches located in all provinces except Prince Edward Island, these services are made available to an estimated 60 p.c. of the population of Canada, to anyone in the community regardless of age or financial status and on a 24-hour basis, for acute, chronic or convalescent patients.

In 1968, 109,151 patients were assisted, most of whom were medical and surgical patients and the remainder were maternity patients and new-born infants. A sick-room-supply loan service is also provided. Other services are offered according to local needs, in shared programs with other agencies or in demonstration programs. The Order has co-operated, when requested, in the establishment of services related to home care, such as housekeeping, home help, and meals-on-wheels. Additional services may include school health clinics, immunization clinics, classes for expectant parents and part-time nursing services to small industries.

Funds for the organization come from a federal grant, United Appeals, individual donations, membership fees and an annual campaign. The national office is located in Ottawa.

PART V.—UNIFORM LEGISLATION GOVERNING PRIVATE PENSION PLANS

The enactment of the Canada and Quebec Pension Plans emphasized the need for uniform private pension legislation across Canada. Ontario amended the Ontario Pension Benefits Act with effect from July 30, 1965, and Quebec enacted the Supplemental Pension Plans Act with effect from July 15, 1965. The Pension Benefits Act of Alberta came into force on Jan. 1, 1967, and that of Saskatchewan was assented to on Apr. 1, 1967. The provincial legislation governs all pension plans operating on and after the effective date in the particular province. Similar legislation at the federal level, the Pension Benefits Standards Act, was assented to on Mar. 23, 1967, and is applicable only to pension plans having members employed in works, undertakings and businesses (generally, banks and interprovincial transportation and communication) that are under federal jurisdiction.

Under these Acts, basic standards have been established with which pension funds or plans organized and administered to provide a pension benefit to employees must comply in order to receive registration, and they are not allowed to operate in these provinces or in the federal areas of responsibility unless they have received registration.

By agreement, each of the provinces mentioned above recognizes similar legislation of the others, so that a pension plan that has been registered and reports in one province does not have to seek registration or duplicate all its reporting procedure in another of these provinces if it extends its operations to employees in that other province.

The legislation requires that an employee's benefits under a pension plan become fully vested (i.e., he has full entitlement to those benefits, which will be paid to him on retirement) when he reaches age 45 and has completed either a minimum of ten years of membership in a pension plan or ten years of service with the one employer. Moreover, should the

employee leave his job or resign his membership in the plan prior to retirement, at least 75 p.c. of his total benefits under the plan must be locked-in for purposes of his pension, allowing him to withdraw no more than 25 p.c. of the commuted value of those benefits in a lump sum. These rules apply as from the qualification date established under the legislation or from the date the plan was established if it commenced operations after the qualification date.

Other provisions of this legislation are intended to ensure the full solvency of these pension plans within a specified period of time, to restrict the types of investments in which the funds of the plan may be invested, to provide that an employee's pension rights are portable if he should change his job, and to establish that each interested party to a pension plan is adequately informed as to the provisions of the plan.

PART VI.—VETERANS SERVICES*

The Department of Veterans Affairs administers most of the legislation known collectively as the Veterans Charter and also provides administrative facilities for the Canadian Pension Commission, which administers the Pension Act and Parts I to X of the Civilian War Pensions and Allowances Act; for the War Veterans Allowance Board, which administers the War Veterans Allowance Act and Part XI of the Civilian War Pensions and Allowances Act; and for the Secretary General (Canada) of the Commonwealth War Graves Commission.

The principal benefits now available to veterans are medical treatment for those eligible to receive it, land settlement and home construction assistance, educational assistance for the children of the war dead, general welfare services, disability and dependants pensions and war veterans allowances. The work of the Department, except the administration of the Veterans' Land Act, is carried out through 18 district offices and four sub-district offices in Canada and one district office in England; the benefits of the Veterans' Land Act are administered through seven regional offices and 26 district offices across Canada.

The twenty-fifth anniversary of the Normandy D-Day landings of World War II—June 6th, 1944—was observed in June 1969 by Canada and other allied countries. Remembrance ceremonies were held at several places in France, the principal one at the Beny-sur-Mer Canadian War Cemetery where lie 2,043 Canadians who lost their lives in the landings and beachhead fighting. This cemetery is near where the 3rd Canadian Division landed on D-Day.

The White Paper on veterans pensions for disability and death related to military service was presented to the Parliamentary Standing Committee on Veterans Affairs in August 1969. The White Paper is a statement of how the Government proposes to implement those recommendations of the Committee to Survey the Work and Organization of the Canadian Pension Commission (Woods Committee) that commend themselves to the Government. Some of these recommendations have already been put into effect under existing authorities.

On Sept. 14, 1969, the cornerstone was laid for the new \$14,200,000, 13-storey Ste Anne's Hospital at Ste Anne de Bellevue, Que., to be completed in the autumn of 1970. This hospital will have 678 beds for chronic-care veterans and a psychiatric centre of 290 beds.

* Prepared by the Department of Veterans Affairs.

Section 1.—Pensions and Allowances

Disability and Dependants Pensions*

Canadian Pension Commission.—The Canadian Pension Commission administers the Pension Act (RSC 1952, c. 207, as amended) and Parts I to X of the Civilian War Pensions and Allowances Act (RSC 1952, c. 51, as amended). The members of the Commission are appointed by the Governor in Council who may also impose upon the Commission duties in respect of any grants in the nature of pensions, etc., made under any statute other than the Pension Act. It reports to Parliament through the Minister of Veterans Affairs. The Commission has district offices in principal cities across Canada with a Senior Pension Medical Examiner in charge.

The Pension Act.—Previous issues of the Year Book contain information on the development of Canadian pension legislation together with yearly statistics on numbers and liabilities.

The Pension Act makes provision for the payment of pensions in respect of disability or death resulting from injury or disease incurred during or attributable to service with the Canadian Forces in time of war or peace. Provision is also made for supplementing, up to Canadian rates, awards of pension to or in respect of Canadians for disability or death suffered as a result of service in the British or Allied Forces during World War I or World War II, or payment of pension at Canadian rates in cases where the claim has been rejected by the government of the country concerned.

Following are the rates of pension under Schedules A and B of the Pension Act from 1919 to date (October 1970).

RATES PER ANNUM FOR 100-P.C. DISABILITY PENSIONERS (SCHEDULE A)

<i>Effective Date</i>	<i>Disability Pensioner</i>	<i>Wife</i>	<i>One Child</i>	<i>Two Children</i>	<i>Each Subsequent Child</i>
	\$	\$	\$	\$	\$
Sept. 1, 1919.....	720	180	144	264	96
Sept. 1, 1920.....	900	300	180	324	120
Oct. 1, 1947.....	1,128	372	228	408	144
Jan. 1, 1952.....	1,500	540	240	420	144
July 1, 1957.....	1,800	600	240	420	144
Mar. 1, 1961.....	2,160	720	324	564	192
Sept. 1, 1964.....	2,400	768	360	624	216
Sept. 1, 1966.....	2,760	768	360	624	216
Jan. 1, 1968.....	3,180	876	408	720	240

RATES PER ANNUM FOR WIDOWS AND DEPENDANTS (SCHEDULE B)

<i>Effective Date</i>	<i>Dependent Parent</i>	<i>Widow</i>	<i>One Child or Dependent Brother or Sister</i>	<i>Two Children or Dependent Brothers or Sisters</i>	<i>Each Subsequent Child or Dependent Brother or Sister</i>
	\$	\$	\$	\$	\$
Sept. 1, 1919.....	576	576	180	300	96
Sept. 1, 1920.....	720	720	180	324	120
Oct. 1, 1947.....	900	900	228	408	144
Jan. 1, 1952.....	900	1,200	240	420	144
July 1, 1957.....	1,080	1,380	240	420	144
Mar. 1, 1961.....	1,296	1,656	324	564	192
Sept. 1, 1964.....	1,428	1,824	360	624	216
Sept. 1, 1966.....	1,428	2,100	360	624	216
Jan. 1, 1968.....	1,632	2,400	408	720	240

NOTE.—The rates for orphan children or orphan brothers and sisters are double those shown above. The pensionable children of widows who have been awarded pension are paid at orphan rates. Pensions awarded to parents or brothers and sisters may be less than the amounts shown in accordance with the provisions of the Pension Act.

* See Appendix III for statement re increases in pensions and allowances announced in the House of Commons, Dec. 2, 1970.

As may be noted above, the basic rate of pension for widows (which previously applied to widows of all ranks up to and including that of Colonel) was increased from \$2,100 to \$2,400 a year. This rate being higher than that formerly payable to widows of higher ranks, i.e., \$2,160, the increase had the effect of increasing pensions for the latter and making the rate for widows the same for all ranks. Disability pensions have been payable at the same rate for all ranks since the 1966 increase, so that rank now has a bearing only on parent's pension under Schedule B of the Act. The maximum rate for the dependant parent of a deceased member of the forces who held the rank of Colonel and all ranks below is now \$1,632 a year; where the deceased held a higher rank, the maximum rate is \$2,160 a year. The maximum rate that may be paid to a dependant parent if there is a widow in receipt of pension is \$732 a year and the maximum additional amount that may be paid when there are two parents is \$348 a year.

For assessments lower than 100 p.c., the awards under Schedule A are proportionately less. Attendance allowance, which is payable to a pensioner who is totally disabled, helpless and in need of attendance, and which varies from a minimum of \$480 to a maximum of \$3,000 a year depending on the degree of attendance required, is paid in addition to pension. Although a pensioner must be totally disabled to receive this allowance, the disability resulting in the need of attendance may be non-pensionable.

The Civilian War Pensions and Allowances Act, Parts I to X, provides for the payment of pensions to or on behalf of persons who served in certain civilian groups that were closely associated with the war effort during World War II and who suffered injury or death as a result of such service; these include merchant seamen, saltwater fishermen, auxiliary services personnel, ferry pilots of the RAF Transport Command, firefighters who served in Britain, etc.

1.—Pensions in Force under the Pension Act, as at Dec. 31, 1969

War Veterans Allowances and Civilian War Allowances

War Veterans Allowance Board.—The War Veterans Allowance Board is a quasi-judicial body consisting, at present, of ten members appointed by the Governor in Council. The Board administers the War Veterans Allowance Act and Part XI of the Civilian War Pensions and Allowances Act and reports to Parliament through the Minister of Veterans Affairs. The Board acts as an appeal court for an applicant or recipient aggrieved by a decision of a District Authority and may, on its own motion, review and alter or reverse any adjudication of a District Authority. The Board is also responsible for instructing and guiding the District Authorities in the interpretation of policy and for advising the Minister with respect to Regulations concerning the administration of the Act.

War Veterans Allowance District Authorities.—In 1950, 18 District Authorities were established in the regional districts of the Department of Veterans Affairs and granted full power to adjudicate on all matters arising under the War Veterans Allowance Act. In

1960, a separate authority—the Foreign Countries District Authority—was established to look after recipients living outside Canada. The members of a District Authority are employees of the Department of Veterans Affairs appointed by the Minister with the approval of the Governor in Council.

War Veterans Allowances.—The War Veterans Allowance Act, 1952, as amended, provides an allowance to otherwise qualified war veterans who, because of age or infirmity, are no longer able to derive their maintenance from employment and to ensure that their income does not fall below a specified scale. Widows and orphans of qualified veterans are eligible for benefits. Since its inception in 1930, the Act has been amended on 14 different occasions to meet additional needs of veterans and their dependants. The most recent amendment increased monthly rates and annual income ceilings, effective Sept. 1, 1966 to:—

<i>Item</i>	<i>Monthly Rate</i>	<i>Annual Income Ceiling*</i>
	\$	\$
Single.....	105	1,740
Married.....	175	2,940
One orphan.....	60	1,008
Two orphans.....	105	1,608
Three or more orphans.....	141	2,016

* Where a recipient or spouse is blind, the income ceiling is \$120 higher.

At Dec. 31, 1969, there were 82,712 recipients of War Veterans Allowances, made up of 50,008 veterans, 32,384 widows and 320 orphans; 671 of the total resided outside Canada. The annual liability for all recipients was estimated at \$89,127,000.

Civilian War Pensions and Allowances.—Part XI of the Civilian War Pensions and Allowances Act makes available to certain groups of civilians, their widows and orphans, benefits similar to those available to veterans under the War Veterans Allowance Act. These groups, which performed meritorious service in World War I or World War II, are: Canadian merchant seamen of both wars; non-Canadians who served in Canadian merchant ships in either war; Canadian voluntary aid detachments of World War I; Canadian fire-fighters of World War II; Canadian welfare workers of World War II; Canadian trans-atlantic aircrew of World War II; and Newfoundland Overseas Forestry Unit of World War II.

At Dec. 31, 1969, there were 1,892 civilians, 503 widows and nine orphans in receipt of Civilian War Allowances, a total of 2,404, of whom one resided outside Canada. The annual liability was estimated at \$3,329,000.

Veterans' Bureau

The Veterans' Bureau, which is a branch of the Department of Veterans Affairs, assists former members of the Armed Forces and their dependants and former members of the Merchant Navy and the Royal Canadian Mounted Police in preparing and presenting claims to the Canadian Pension Commission; it has been in operation for 40 years. The Chief Pensions Advocate, who heads the Bureau at Ottawa, is assisted by pensions advocates, all of whom are lawyers, located in the departmental district offices and Head Office. The pensions advocates appear as counsel for applicants before Appeal Boards of the Commission and, in addition, advise pensioners and applicants upon any provision of the Pension Act or phase of pension law or administration that may have a bearing on their pension claims. No charge is made for the services of the Bureau.

During 1969, the Veterans' Bureau submitted 6,925 claims to the Canadian Pension Commission for adjudication, of which 39 p.c. were wholly or partially granted. These included 1,159 claims presented to Appeal Boards of the Commission.

Section 2.—Welfare and Treatment Services

Welfare Services

Welfare services for veterans and, where appropriate, their dependants are provided by the Welfare Services Branch. These include the administration of assigned statutes; the conducting of field work and reporting for other branches of the Department, the Canadian Pension Commission, the War Veterans Allowance Board and Services Benevolent Funds; and the provision of a rehabilitation and welfare program of advice and counselling including referral, where indicated, to other public or private agencies, veterans organizations, etc.

War Service Grants.—War service gratuities payable under the War Service Grants Act to veterans of World War II and the operations to restore peace in Korea are now payable only in cases where delayed application is acceptable. Re-establishment credit payable under the same Act was available up to Oct. 31, 1968. Payment of the credit, except for a balance of \$50 or less, is not made in cash to the veteran but is released on his behalf for specified purposes. Up to Dec. 31, 1969, a total of \$315,616,977 had been paid out and unused balances amounted to \$8,266,647. During the year ended Dec. 31, 1969, \$7,100 was paid out, made up of \$6,520 for purchases of homes and for repairs and furniture; \$567 for purchases of businesses, tools and equipment; and \$13 for miscellaneous items such as insurance, special equipment for training, clothing, etc.

Assistance Fund.—Recipients of benefits under the War Veterans Allowance Act and Part XI of the Civilian War Pensions and Allowances Act living in Canada may be given help from the Assistance Fund if their total income is lower than the permitted maximum. Assistance may take the form of a monthly supplement based on shelter, fuel, food, clothing, personal care and specified health costs or of a single award to meet an unusual or emergency need. The number of persons assisted to Dec. 31, 1969 was 18,447, the number in receipt of monthly supplements at the end of the year was 15,463 and Fund expenditures to Dec. 31, 1969 amounted to \$5,437,760; comparable figures to Dec. 31, 1968 were 17,188, 14,238 and \$4,446,849, respectively.

Education Assistance to Children.—The Children of War Dead (Education Assistance) Act provides help in the form of allowances and the payment of fees for the post-secondary education of children of those whose deaths have been attributed to military service. Assistance is restricted to children attending, in Canada, educational institutions which require secondary school graduation, matriculation or equivalent standing for admission. These include, in addition to universities and colleges, such facilities as hospital schools of teaching and institutes of technology. From its inception in July 1953 to Dec. 31, 1969, expenditures totalled \$8,839,061, of which \$4,764,521 was spent in allowances and \$4,074,540 in fees. By the end of December 1969, 5,145 children of Canada's war dead had been approved for training. Of these, 2,183 had successfully completed training—302 had obtained degrees in arts and science, 454 in education, 146 in engineering and applied science, 46 in social work, 38 in medicine, 41 in law, 143 in other university faculties, 444 in nursing, 257 in teaching, 312 in administrative and technological fields. At the same date, there were 747 students in university and 192 in non-university courses receiving assistance.

Veterans Insurance.—The Returned Soldiers Insurance Act (SC 1920, c. 51 as amended) provided eligibility to contract for life insurance with the Federal Government up to a maximum of \$5,000 to any one veteran of World War I. No policies were issued after Aug. 31, 1933. There were 48,319 policies issued during the eight years in which the Act was open amounting to \$109,299,500 and, of these, there were 4,727 in force with a value of \$10,268,481 on Dec. 31, 1969.

The Veterans Insurance Act (RSC 1952, c. 279 as amended) enabled veterans following their discharge and widows of those who died during World War II service to contract with the Federal Government for a maximum of \$10,000 life insurance. Veterans with active service in Korea were extended eligibility by virtue of the Veterans Benefit Act 1954. The period of eligibility to apply for this insurance ended Oct. 31, 1968. To Oct. 31, 1968, 56,148 policies in the amount of \$185,141,500 had been issued and, of these, 25,070 policies with a value of \$80,917,204 were in force on Dec. 31, 1969.

Rehabilitation and Welfare.—Welfare officers at Departmental District Offices work closely with other branches of the Department, with other public agencies at all levels and with private agencies and organizations in assisting veterans and their dependants to deal with problems of social adjustment, particularly those associated with physical disabilities or the disabilities of increasing age. The latter occur more frequently, of course, as the age of the veteran population increases. A program of university, vocational, technical and home training, with allowances, is provided for disabled pensioned veterans and vocational rehabilitation is also promoted by training assistance. Sheltered workshops at Toronto and Montreal and home assembly work in other centres produce poppies and memorial wreaths associated with Remembrance Day observances.

Treatment Services

The Treatment Services Branch of the Department of Veterans Affairs provides medical and dental services for entitled veterans throughout Canada as well as for members of the Armed Forces, the Royal Canadian Mounted Police, and the wards of other governments or departments at the request and expense of the authorities concerned. Prosthetic services are provided to entitled veterans by the Department of National Health and Welfare but paid for by the Department of Veterans Affairs.

The Branch provides examination and treatment to disabled pensioners for their pensionable disabilities, and provides treatment to war veterans allowance recipients (but not to their dependants) and veterans whose service and financial circumstances render them eligible for free treatment or at a cost adjusted to their ability to pay. If a bed is available, any veteran may receive treatment in a Departmental hospital on a guarantee of payment of the cost of hospitalization. The pensioner receives treatment for his pensionable disabilities regardless of his place of residence but service to other veterans is available in Canada only. Where Departmental facilities are not readily accessible, an eligible veteran may obtain treatment at the expense of the Department in an outside hospital from a doctor of his choice. Domiciliary care may be provided to eligible veterans in Departmental facilities where the need for active or chronic treatment is sufficiently light, provided that excess beds are available.

Under the Federal Provincial Hospital Insurance program, DVA hospitals are recognized for the provision of insured services to veterans. Where treatment is given for a non-pensioned condition at a DVA hospital to a veteran, or elsewhere to a veteran eligible under the Veterans Treatment Regulations, the hospitalization is an insured service under the Federal Provincial Hospital Insurance program and his medical care is an insured service under the Federal Provincial Medical Care Insurance program in provinces where it has been introduced. The Department pays premiums where required on behalf of veterans who are in receipt of War Veterans Allowance.

Hospital Facilities.—Treatment is provided in nine active treatment hospitals located at Halifax, N.S.; Saint John, N.B.; Montreal and Ste Anne de Bellevue, Que.; London, Ont.; Winnipeg, Man.; Calgary, Alta.; and Vancouver and Victoria, B.C.; and in three domiciliary care homes at Ottawa, Ont.; Saskatoon, Sask.; and Edmonton, Alta. The rated bed capacity of these institutions at Dec. 31, 1969, was 6,005 beds. It should also be noted that in Ottawa both acute and chronic cases that require definitive treatment are admitted to the National Defence Medical Centre. A veterans pavilion of 67 beds is

located at St. John's General Hospital, St. John's, Nfld.; 1,200 beds are available at Sunnybrook Hospital in Toronto and 150 at the Centre Hospitalier de l'Université Laval in Quebec for the priority use of veterans, and some 500 beds in community hospitals located in St. John's, Nfld.; Charlottetown, P.E.I.; Kingston, Ont.; Regina and Saskatoon, Sask.; and Edmonton, Alta.

Medical Staff and Training Programs.—The active and consulting medical staffs of departmental hospitals are usually private practitioners and specialists who also hold teaching appointments on the medical faculties of the various local universities. Their appointment and selection is normally recommended by the Deans of Medicine of the universities with which the departmental hospitals are affiliated. This affiliation results in approval by the Royal College of Physicians and Surgeons of Canada for postgraduate teaching in resident teaching programs of non-core years in medicine, surgery, psychiatry and other specialties. Some departmental hospitals are also affiliated with technical schools and act as hospital teaching units in technical school programs for paramedical sciences such as laboratory and radiology technicians. In addition, residency training programs are given in psychology, dietary, physiotherapy and occupational therapy, and in the medical social services at both the undergraduate and graduate levels. A postgraduate residency program in hospital pharmacology and pharmacy methodology is conducted at Westminster Hospital, London, Ont. At Camp Hill Hospital in Halifax the department has become affiliated with the university medical school in the undergraduate clinical teaching program, in addition to participating in graduate residency training.

Clinical Research Program.—During 1970, there were 38 projects in progress under the clinical research program. This program is varied but in the main deals with conditions affecting aging, which the Department is in a special position to investigate. Self-contained clinical investigation units are established in active treatment hospitals located at Montreal, London, Winnipeg and Vancouver.

Section 3. —Land Settlement and House Construction

The Veterans' Land Act, 1942, as amended, provides financial, technical and supervisory assistance to World War II and Korean Force veterans, to enable them to engage in agriculture or commercial fishing on a full-time basis; to acquire, build or improve homes; and to settle on provincial, federal and Indian reserve land. Loans may be made of up to \$40,000 for full-time farmers on economic farm units, to \$18,000 for small family farmers, to \$16,000 for small holders (part-time farmers) and to \$18,000 for veterans building houses on city-size lots. The financial assistance available under the Act is generally comparable to that available to non-veterans under the Farm Credit Act and the National Housing Act.

From inception of the Act to Dec. 31, 1969, 126,607 veterans were settled under the provisions of the Act; 31,291 were established as full-time farmers, 76,565 as small holders, 5,648 as Crown land settlers, 1,409 as commercial fishermen, 1,774 Indian veterans were established on reservations and 4,313 veterans acted as their own contractors in building homes on city-size lots. Subsequent to settlement, 17,627 farmers and 13,883 small holders and commercial fishermen were given additional financial assistance. In 1969, loans amounting to over \$90,998,604 were approved on behalf of 9,358 veterans. From inception of operations to the end of 1969, \$1,028,807,174 was spent on repayable loans, advances and non-repayable grants and 62,524 veterans had earned conditional grants of \$111,385,000. By the end of that year, 45,018 of them had successfully completed their settlement contracts—15,346 farmers, 22,996 small holders, 572 commercial fishermen, 4,618 Crown land settlers, and 1,486 Indian veterans on reservations.

Field Officers highly trained in the techniques pertaining to agriculture, construction and land appraisals provide advisory, supervisory and appraisal field services. During 1969, 7,155 properties were appraised, included in which were 175 for the Indian off Reserve

and Eskimo Housing Program and 101 special assignments carried out on behalf of other government departments and agencies. Altogether, 1,252 new houses were started—1,207 for small holders and commercial fishermen, 40 farm homes and five on city-size lots—and 1,548 new houses were completed. Two construction schools were organized, attended by 111 veterans.

During the fiscal year 1968-69, instalments falling due on properties purchased by veterans under the Act amounted to \$30,088,000, excluding share-of-crop payments; over 95 p.c. of the total amount due was collected and 1,099 veterans under share-of-crop agreements paid \$1,334,000.

By Dec. 31, 1969, 14,796 veterans were insured under the Veterans' Land Act group life insurance for almost \$143,072,000. Since inception of the group plan, 164 insured veterans died and \$1,224,828 was paid to retire their indebtedness.

2.—Summary of Operations Under the Veterans' Land Act, as at Dec. 31, 1969

¹Includes 5,607 civilian purchaser accounts from inception.

²Includes 976 active civilian purchaser accounts.

Section 4.—Commonwealth War Graves Commission

The current Charters of the Commonwealth War Graves Commission consist of two documents—the Original Charter of Incorporation dated May 21, 1917, and the new Supplemental Charter dated June 8, 1964. Under these Charters the Commission is entrusted with the marking and maintenance in perpetuity of the graves of those of the British Empire and Commonwealth Armed Forces who lost their lives between Aug. 4, 1914 and Aug. 31, 1921, and between Sept. 3, 1939, and Dec. 31, 1947, and with the erection of memorials to commemorate those with no known grave.

The Canadian High Commissioner in London, England, is the official Commission member for Canada, the Minister of Veterans Affairs is the Agent of the Commission in Canada, and the office of the Secretary-General of the Canadian Agency is in the Veterans Affairs Building, Ottawa.

PART I.—FORMAL EDUCATION*

Section 1.—The Current Education Situation

The cost of education in Canada for the year ended Mar. 31, 1970, has been estimated at \$6,900,000,000, an amount that represents about 20 p.c. of all taxes levied by federal, provincial and municipal governments. During the 1960s, school and university enrolment increased by 50 p.c. and staff by 70 p.c., so that, as the 1970s began, approximately 30 p.c. of the entire population of Canada was either receiving or dispensing education.

Canada's educational administrators are deeply conscious of the fact that the young people of the country must be fitted to face the years ahead secure in the realization that they have been trained to meet all challenges that may arise in their future careers. The young man who chooses a technological trade and the young girl who chooses a business career must be confident of receiving instruction of as high a standard as those students intending to specialize in one of the professions. It is also essential to them that no young person in Canada be hindered from following the career of his or her choice by colour, race, creed, sex, social standing or financial limitations. Thus, Canada's requirements have in recent years become increasingly demanding and diverse. Courses offered in Canadian schools now seem almost limitless, from the elementary and secondary level where, in addition to the basic subjects, instruction is available in such cultural areas as music, drama and fine arts, and community colleges and vocational institutions where a widening range of advanced technological courses is given, to universities with numerous faculties and provisions for graduate study in many fields.

It should be noted, too, that in the late 1960s there was a dramatic change in attitude toward bilingual education in Canada. The Province of Quebec passed legislation rigidly

* Prepared in the Education Division, Dominion Bureau of Statistics. Some tables in the statistical Section include later figures than others but in each case the most recent data available at the time of writing (August 1970) are given.

enforcing equal emphasis on both languages in all schools. The Ontario Government ruled that French shall assume sufficient importance in that province to ensure equal proficiency in both languages and that all-French schools should be established in those sections of the province where the population is predominantly French. In other parts of Canada also, efforts are being made to provide for minority-group education.

The 1970s are ushering in an era when this country appears to be well on the way toward surmounting many obstacles that have arisen in the field of education. Canadian universities have always had a world reputation for excellence and in the past decade they have increased still further in numbers and prestige. True, there have been domestic problems caused by student unrest but, through greater representation of students on administrative boards resulting in better understanding between students and staff, these problems seem to have been largely overcome.

At the post-secondary level, a more uniform structure has emerged across the country and these institutions are now almost universally known as "community colleges". In the Province of Quebec, 30-odd varied institutions, many of them formerly operated by religious communities, are now known as "Collèges d'enseignement général et professionnel" and commonly referred to as CEGEPs; there are also about 20 private colleges in the province, some of which will undoubtedly be absorbed into the CEGEP group within the next few years. There has been a recent upsurge in the establishment of additional post-high school vocational and technical institutions across Canada, which have been required to meet the labour market's rapidly increasing need for qualified technicians.

It is interesting to note that women today comprise about 35 p.c. of the full-time university enrolment and that many are taking certain post-secondary courses which had previously shown an all-male enrolment. For example, in 1968-69 the Ryerson Polytechnical Institute of Toronto reported 10 female enrolments in engineering, an equal number were enrolled in law enforcement and crime detection at another Ontario institution, six women were enrolled in chemical technology in Manitoba and 52 in the same course in Alberta. Female interest in electronics and forestry is also evidenced by a few enrolments in such courses in different institutions across the country.

At the elementary and secondary levels, the greatest change has been brought about by the realization that some adjustment had to be made to overcome the wide variance in aptitude among pupils and allow more flexibility in dealing with such individual differences. This has resulted in a drastic revision of policies to include non-graded systems, subject promotion, changes in methods of examination and the extension of guidance facilities.

One of the notable increases in teaching facilities is in the area of library service. A DBS survey showed that in the school year 1968-69, school libraries increased their stocks of books by nearly 8,000,000. These libraries provide up-to-date reference books on all subjects in the school curricula and have assumed increasing importance as resource centres for audio-visual aids such as projectors, films, filmstrips, maps, tapes and records.

Efforts are also being made to overcome the financial barriers to continuing education. The investigations of demographers and sociologists are confirming and quantifying the long-held suspicions that financial constraints are operating to deny education to many Canadians who could profit from it. Various methods are therefore being sought to lighten the financial burden upon the individual and to equalize the rapidly increasing load being carried by the taxpayer. The Federal Government is assuming an increasingly prominent role in the education field, particularly in regard to the re-training program of the Department of Manpower and Immigration involving adult technical and vocational training, post-secondary and university education, all matters of prime concern to the nation as a whole. A recent major project involved the decision by the Department of the Secretary of State to set aside \$50,000,000 to be expended for the promotion of bilingualism across Canada.

Thus, ethical considerations concerning the duties of society in the satisfaction of the personal needs of the individual and economic considerations concerning the kinds of

individuals required to satisfy the manpower needs of society are combining to encourage the extension and equalization of educational opportunity. The rising costs of this endeavour are causing a reappraisal of traditional methods of financing education, tending toward the assumption of increasing proportions of the load by higher levels of government. Taken along with other developments in the economic, social and cultural life of the community, this is resulting in the Federal Government making a significant contribution toward the education of Canadians.

Two secondary schools in the Timmins-South Porcupine area of northern Ontario, one teaching in English and the other in French, co-operate to make the study of French a "langue vivante" for the English-speaking students. The schools exchange a few senior students every two weeks for three to five days.

Section 2.—Administration and Organization of Education

Responsibility for Education in Canada

Canada is a federal state, in which responsibility for the organization and administration of public education is exercised by the provincial governments. The Federal Government is directly concerned only with the provision of education for certain special groups—Indian and Eskimo children and other children in the Yukon and Northwest Territories, inmates of federal penitentiaries and families of members of the Armed Forces on military stations. In addition, the Federal Government finances re-training of adults, provides financial support to the provinces amounting to at least 50 p.c. of operating costs of post-secondary education, participates to a considerable extent in informal education and makes grants-in-aid for research personnel and equipment in universities.

Because each of the ten provinces has the authority and responsibility for organizing its education system as it sees fit, organization, policies and practices differ from province to province. Each has a department of education, headed by a minister who is a member

of the Cabinet. Ontario has, in addition, a Department of University Affairs under its Minister of Education. Each department is administered by a deputy minister who is a professional educationist and a public servant. He advises the minister, supervises the department and gives a measure of permanency to its education policy, in general carries out that policy, and is responsible for the enforcement of the Public School Act. The department of education usually also includes: a chief inspector of schools and a staff of local inspectors; directors or supervisors of curricula, technical education, teacher training, home economics, guidance, physical education, audio-visual education, correspondence instruction and adult education; directors or supervisors of other sections (according to the needs of the particular province); and technical personnel and clerks.

Other provincial departments having some responsibility for operating school programs are: departments of labour, which operate apprenticeship programs; agriculture departments, which operate agriculture schools; departments of the attorney-general or of welfare, which operate reform schools; and departments of lands and forests, which operate forest ranger schools.

From the beginning, each department of education has undertaken, among other things, to provide: (1) inspection services to ensure maintenance of standards; (2) the certification of teachers; (3) courses of study and lists of prescribed or approved textbooks; (4) financial assistance to local authorities in the construction and operation of schools; and (5) regulations for the guidance of trustees and teachers. In return, each department requires regular reports from the schools. When first introduced, government grants to schools were based on such factors as number of teachers, enrolment, days in session and attendance. Somewhat later, special grants were introduced in most provinces to meet a variety of expenses, such as the construction of the first school, the organizing of special classes, the provision of transportation for pupils, school lunches and other contingencies. A number of provinces made provision for equalization grants, and now the majority have a foundation program of one kind or another.

The work of the departments of education has grown considerably. Many have expanded their services in the fields of health, audio-visual aids, art, music, agriculture, special education, correspondence courses and pre-vocational and trade courses. At the same time there has been an increasing delegation of authority to local boards and school staffs. One illustration of this tendency is a reduction in the number of departmental (external) year-end examinations. Few provinces now provide for more than one or two such examinations—at the end of the final and, in some cases, at the end of the second last year of the secondary school course. Another illustration is the increasing use of lists of approved textbooks from which local authorities may make their own choice, instead of lists of prescribed texts. Courses of study are now seldom planned by only one or two experts in the department; instead they result from conferences and workshops including active teachers and other interested individuals or bodies. In most provinces "curriculum construction" is considered to be a continuous procedure.

Local Units of Administration

In all provinces, schools are established and operated by local education authorities, functioning under the terms of a Public School Act and held responsible to the provincial government and resident ratepayers for the actual operation of the local schools. Through the delegation of authority, education has become a provincial-local partnership with the degree of decentralization reviewed intermittently.

Under recent amendments to provincial legislation, school units have been enlarged in all provinces except Prince Edward Island. In Quebec, the greater part of the Protestant system has been organized into larger units and the Roman Catholic system has reorganized into 55 regions its administrative structure for secondary education only. In the other provinces, a comparatively recent innovation has been the establishment of community

colleges, in which at least the last one or two years of high school and the first one or two years of college are given. Most of these institutions offer both vocational and academic programs.

With the growth of cities and towns and of educational facilities and requirements, the old-time three-member local school board became inadequate as an administrative structure. The original school boards remained as units but provision was made for urban school boards with more members and generally with responsibility for both elementary and secondary schools, and for providing the necessary staff, buildings, equipment and transportation. The local boards still in existence in some districts have limited powers and duties, usually functioning in an advisory capacity and looking after buildings and grounds.

Recent Changes in Educational Systems and Procedures

During the past five years, many changes of major or minor character have occurred in the education field in all provinces and territories. The most important are outlined briefly in the following paragraphs.

Newfoundland.—Until recently, the system of education in Newfoundland, originally established in 1874, was strictly denominational. As a result of the recommendations of a provincial Royal Commission on Education and Youth set up in 1964, consolidation of the school systems of the major Protestant denomination has since taken place, but the Roman Catholic, Pentecostal and Seventh Day Adventist denominations still operate their own schools. The province is served by a network of 11 district vocational schools and post-secondary education is obtainable at the College of Trades and Technology and at the College of Fisheries, Navigation and Engineering, both located at St. John's. The Memorial University of Newfoundland, also situated at St. John's, offers degree courses as well as certificate courses in public administration, business administration and banking.

Prince Edward Island.—In this province, as in others, the trend is toward enlarged school districts rather than small educational units and plans are under way for further consolidation. Five per cent of the elementary and secondary pupils receive their entire education in French, and French is taught as a second language in all other schools. Two new institutions were opened in Charlottetown in the autumn of 1969—Holland College which offers post-secondary vocational training for the youth of the Island, and the University of Prince Edward Island which replaces the former Prince of Wales College and St. Dunstan's University.

Nova Scotia.—The Educational Assistance Act and certain amendments to the Education Act, both passed by the Legislature in 1968, enabled municipal units of an amalgamated area, in co-operation with the Minister of Education, to decide upon the composition of an amalgamated school board. In 1969, a modified junior high school program was authorized which will give students of average or above-average standing extra instruction in one or more subjects. In the same year, authority was given for an adult, who had not completed high school but had improved his educational standing through job experience or informal training, to be awarded a high school equivalency diploma. Such a diploma is issued on the basis of a series of tests, as developed and validated over a 25-year period by the Commission on Accreditation of the American Council on Education. Nova Scotia is the first Canadian province to be given permission to use these tests.

New Brunswick.—By authority of the Schools Act, which was passed by the New Brunswick Legislature in 1966 and became effective on Jan. 1, 1967, 422 school districts were replaced by 33 enlarged districts. The province is divided into seven regions, each administered by a regional superintendent, and each region has from four to six districts with enrolments of between 11,500 and 34,000 pupils. Schools are strictly non-denomina-

tional. District trustees range in number from nine to 15, some elected and the remainder appointed by the Lieutenant-Governor in Council from among residents eligible to serve.

Quebec.—In 1964, the Quebec Government, acting on recommendations of the provincial Royal Commission on Education (1961-64), passed legislation, under Bill 60, establishing a new administrative structure for the school system in that province; the Ministry of Education replaced the former Departments of Youth and of Public Instruction. The schools built under this new system and the additional teaching personnel and materials required for their operation resulted in an increase in expenditures for education from \$592,000,000 in 1965 to a budgetary estimate of \$913,480,000 in 1968. There are now 55 French and eight English regional school boards throughout the province. Thirty-three Collèges d'enseignement général et professionnel (known as CEGEPs) replace most of the former private Collèges classique. Kindergartens, admitting five-year-olds, are now part of the school system, registrations having risen from 17,000 in 1962-63 to an estimated 121,200 in 1969-70. Elementary education, intended for pupils aged six to 11, is given in public schools operated under the direction of local school boards. Since the autumn of 1968, pupils are enrolled in the first grade, only if they have reached the age of six as of Oct. 1. The federal Department of Indian Affairs and Northern Development assumes full responsibility for the education of Eskimo children living in northern Quebec, following the curriculum established by the Ministry of Education of Quebec.

Ontario.—Under recent amendments to the Ontario School Act, county districts now replace former individual units which were administered by three-member boards of trustees. The larger cities, such as Toronto and Ottawa, are excluded and operate their own school systems. Roman Catholic schools are given a choice. Approximately 95 p.c. of the schools in Ontario have abolished the separate administration of elementary and secondary schools which are now administered by the same board. With each county administered by one board, there has been a drastic reduction from thousands of districts to about 200. An important amendment to the Act in 1969 provides for schools for trainable retarded children to be established under the jurisdiction of a special divisional board of education.

Manitoba.—As of Jan. 1, 1969, 93 p.c. of public school enrolments in Manitoba came under the administration of 39 unitary division boards, responsible for all public elementary and secondary education within their jurisdictions. For the remaining enrolments, division boards are responsible for secondary education and district boards for elementary education. Increased emphasis is being placed on open-area classrooms, higher qualifications for teachers, and improved curricula. Other innovations include more meaningful curricula for Indian and metis children now incorporated into regular classes; emphasis in health programs on the abuse of alcohol and narcotics; audio-lingual programs in French and German at grade 10 level; and emphasis on continuous testing to replace formal examinations and on the concept of "independent study" for students in some secondary schools. Final examinations are set and marked under the auspices of the High School Examination Board of Manitoba. Entrance to university requires evidence of Board standing in at least three subjects, with school standing acceptable in two other subjects. In 1969, all Manitoba vocational colleges and institutes of technology became community colleges.

Saskatchewan.—Amendments to the Saskatchewan School Act, in effect at the start of the 1969 school year, authorized the initiation of an ungraded school system in Saskatchewan. Other amendments allow for the exclusion from the regular system of children so mentally deficient as to be incapable of learning. Educatable handicapped children attend special classes in regular schools and blind and deaf children between ages seven and 16 are educated in special schools.

Alberta.—The Province of Alberta is organized into divisions for purposes of education, each division being administered by its own school board. Recent legislation allows

for instruction in French during 50 p.c. of the school day in grades three through 12. In those schools where French is the language of instruction, one hour daily of English is required under the Alberta School Act in grades one and two. A commission on educational planning has been established recently to study all forms and levels of education in an endeavour to determine how these levels can be adapted to future requirements. It should be noted that a completely new School Act will be presented to the provincial legislature in 1970. Educational television projects have been implemented in various parts of the province. A system of community colleges has been established, and continuing importance is placed on facilities and programs at Alberta's three universities and other post-secondary institutions. Unique in this province is the Alberta Petroleum Industry Training Centre, located in Edmonton, where men are trained to work in Alberta's oil industry; since opening in 1966, the Centre has graduated more than 1,700 students, including some from countries as far away as New Zealand and Algeria.

British Columbia.—Six community colleges have been established in British Columbia since 1965. A study made of Vancouver Community College graduates who continued their education in university showed that, in 1968, 433 entered the University of British Columbia as compared with 166 in 1966. Of the 433 students, more than 33 p.c. entered the faculty of education, another 33 p.c. entered the faculty of arts, 17.5 p.c. chose science and 7 p.c. commerce. English is the basic language of instruction in British Columbia schools but, in one experimental project at the kindergarten and grade one levels, instruction is in French for part of each day and it is planned to project this experiment by one grade each year. As of Sept. 30, 1969, there were 10,247 pupils in special classes, such as those for educatable retarded, blind and deaf children. In most school districts, the less-severely handicapped children receive special instruction in regular schools but those more severely handicapped are taught in special schools under government or private operation.

An academic and occupational high school under construction at Frobisher Bay, Baffin Island, has exterior walls made of fibreglass and urethane foam panels which were easily transported and erected. The school, which inside contains all the facilities of a modern 'southern' school, will accommodate 475 students, eliminating the problems involved in sending them long distances from home.

Yukon Territory.—The Yukon Territory school system is operated through a superintendent and staff at Whitehorse, appointed by the Territorial Government and responsible to the Commissioner of the Territory. The Northern Services Division of the federal Department of Indian Affairs and Northern Development offers advice on education policy to the Minister of the Department and to territorial authorities. All schools, both public and separate (with the exception of Carcross Indian Residential School, which is operated by the Department of Indian Affairs and Northern Development) come under direct ownership and operation of the Yukon Territory Government. Although there is provision in the Yukon Territory for public, separate and Indian schools, most Indian children attend public or separate schools; only 82 of 3,699 attended Indian schools in 1968.

Northwest Territories.—School systems in the Northwest Territories Districts of Mackenzie, Franklin and Keewatin are now operated by the territorial Department of Education rather than by the federal Department of Indian Affairs and Northern Development, as previously; education in the Mackenzie District was officially transferred in April 1969 and in the Franklin and Keewatin Districts in April 1970. Enrolment for the 1968-69 term included 3,969 Eskimos, 1,545 Indians and 3,651 others. Of the total of 9,165 students, 8,055 were enrolled in territorial schools, 1,071 in the Roman Catholic school district at Yellowknife, and 39 in two company schools. Subject to increasing modifications, the schools of the Northwest Territories follow the education curricula of the Province of Alberta.

Elementary and Secondary Education

Enrolment in elementary and secondary schools has been increasing year by year until in 1969-70 there were approximately 5,701,000 pupils. Of these, about 164,000 were enrolled in private schools.

Each September, most Canadian children of age six enter an eight-grade elementary school. At about 14 years of age, nearly 90 p.c. of those who entered grade one enter a regular four- or five-year secondary school. From the graduates at this level, a limited number—about 13 p.c. of those who began school—go on to college or university where rather more than half of them pursue a three- or four-year program leading to a bachelor degree in arts or science and the remainder enrol in various professional courses such as commerce, education, engineering, law, medicine, theology, etc.

The 8-4 plan leading from grade one to university was for many years the basic plan for organizing the curriculum and schools, other than those of Catholic Quebec. This plan, although still followed in some school jurisdictions, has been modified from time to time in various provinces, cities or groups of schools, as it appeared inadequate to meet the demands arising from new aims of education. There are a number of variants to be found at present in Canada: the addition of one or even two kindergarten years at the beginning of the system; the addition of an extra year to high school, providing five rather than four years of secondary schooling; the introduction of junior high schools, changing the organization to a 6-3-3 or 6-3-4 plan; or again, the combining of the first six years of elementary school into two units, each designed to reach certain specified goals during a three-year period. A fairly recent innovation is the establishment of junior colleges, affiliated with universities, in which the last one or two years of high school and the first one or two years of college are offered.

The first secondary schools were predominantly academic and prepared their pupils for entry into university. Until recent years, vocational schools were to be found only in the large cities, although schools in some of the smaller centres did provide a few commercial and technical subjects as options in the academic curriculum. Today, besides commercial and vocational high schools, there are, in increasing number, composite and regional high schools that provide courses in home economics, agriculture, shop-work and commercial subjects as well as in the regular secondary school subjects. The number of subjects

Studies outside the classroom give students a first-hand view of many aspects of work and life, widening their interest in modern occupations as well as in the history of their country.

A nuclear power plant fuelling machine is explained to students at the Atomic Energy of Canada's development laboratory.

Students follow the forester's "cruising" techniques for measuring and counting trees, and girls watch as yarn is spun as it was in Canadian homes a century ago.

History students experience 17th-century Indian and European life in a reconstructed missionary fort near Midland, Ont.

offered has also increased greatly and the number of options available provides a wide choice for pupils with a great variety of abilities and aims. Three programs can frequently be distinguished—the university entrance course, the general course for those who wish to complete an academic type of program before entering employment, and vocational courses for those who wish to enter skilled trades. Thus, attention is given to the minority who will go on to institutions of higher learning, while the majority, who will look for jobs, are prepared for entry to their chosen occupation. Considerable emphasis has been placed on music, art, physical education, guidance and group activities but not at the expense of the basic subjects that provide a general foundation.

Special Education.—Interest is increasing in the education of exceptional children—those who deviate so far from the normal as to require special educational facilities. New types of special classes are sometimes started by parents of children with a common disability, who band together to provide help and show the need for such service, which is then taken over by public bodies. Progress in providing such education varies from province to province. It is most commonly found in the city school systems; in rural areas there is usually little provision for the child who needs special attention, except for those who are admitted to residential institutions. There are six schools for the blind, 16 schools for the deaf and a number of training schools for mental defectives. Special classes are found in tuberculosis sanatoria, mental hospitals and reformatories. In many cities, there are classes for the hard-of-hearing, the partly blind and other physically and mentally handicapped children and a few for the highly gifted.

Teachers.—All provinces require candidates for elementary school teacher certificates to have high school completion or better, with at least one year of professional training in a faculty of education or a teachers college. The training usually consists of professional and academic courses, and some time spent in practice teaching. High school teachers are generally university graduates who have taken an additional year of professional training in a college of education, or who have graduated with a degree in education. The trend is for the government departments of education to give the universities responsibility for the training of elementary school teachers as well as secondary teachers. In Newfoundland, Prince Edward Island, Manitoba, Saskatchewan, Alberta and British Columbia all teacher training is conducted at the university, where three or four different courses leading to a degree are provided. About three quarters of the time is devoted to academic courses in arts and science and the remainder to professional courses.

In 1968-69 there were 56 normal schools and teachers colleges, 32 faculties or colleges of education and two institutes of technology engaged in teacher training, with a total enrolment of 49,698. In the same year there were about 237,000 full-time teachers in the public elementary and secondary schools in Canada and 11,000 in the private schools. Most teachers in these schools are paid according to a local salary schedule based on years of training and experience; they contribute to a provincial superannuation scheme and are members of a provincial professional organization. In 1968-69 about 64 p.c. of them were women, of whom a little more than half were married. The median salary of all teachers and principals in the eight provinces other than Quebec and Ontario, for whom adequate data were not available, was \$6,495, an increase of 5.2 p.c. over the previous year. Apart from teachers in Quebec and Ontario, about 23 p.c. of those in elementary schools and 71 p.c. of those in secondary schools had university degrees.

Higher Education

There are distinctive differences in Canadian systems of higher education. The universities and colleges long ago established by the French were based on the culture of old France and were administered by Roman Catholic groups, either religious or secular. These French-language institutions still retain their traditional characteristics but are now conforming almost entirely to the North American system of administration. The largest group of universities and colleges in Canada is administered by English-speaking staffs and offers instruction in English. Apart from those founded and still administered

The University of Alberta, situated on the North Saskatchewan River about two miles from Edmonton's business centre, began its 64th university year in the fall of 1970. Some 20 major teaching and research buildings are situated on its 154-acre campus, as well as two affiliated colleges, residence halls, provincial laboratories, teaching and other hospitals, service buildings, etc. Its 700-acre farm and its botanical gardens are located away from the campus.

by various Protestant religious groups, these institutions are mainly non-denominational, having been established through private subscription or by the provincial government concerned. A few universities provide instruction in both English and French. The University of Ottawa has been a bilingual institution since its establishment in 1866. It was originally under Roman Catholic administration but since 1965 has been administered by a non-denominational board of governors. The administrative bodies of the other bilingual universities, more recently established, are entirely Roman Catholic.

Civil legislation regarding the establishment of new institutions or changes in existing ones is usually enacted by provincial legislatures, except for federal military colleges and a few institutions originally established by Act of the Canadian Parliament. Once an institution is legally chartered, control is vested in its governing body, the membership of which is indicated in the charter. The line of authority runs from the board of governors through the president (or *recteur*) to the senate and deans and the faculty as a whole.

The composition of the board of governors varies according to the type of institution. Provincial universities normally have government representation; church-related institutions have clergymen. Nearly all boards have either direct representation from the business community, alumni associations and other organizations, or are advised by these groups through advisory boards or committees. A recent phenomenon has been the inclusion of students on administrative bodies. The size of the board varies from a very few to over sixty. It has ultimate control of the university and normally reserves to itself complete financial powers, including the appointment of the president and most other staff. On occasion there will be faculty representation on the board and recently there have been

attempts on the part of faculty groups of many institutions to obtain greater representation on the boards of governors. Responsibility for academic affairs is usually delegated to the senate. Composed mainly of faculty members, although there may also be alumni and representatives of non-academic groups included, the board is responsible for admission, courses, discipline and the awarding of degrees.

Although there are variations, most students enter a university after the completion of from 11 to 13 years of elementary and secondary schooling. Courses of instruction ranging from a period of three to five years lead to a bachelor's degree in arts, pure science and such professional fields as engineering, business administration, agriculture and education. Courses in law, theology, dentistry, medicine and some other fields are longer—usually requiring for admission completion of part or all of a first-degree course in arts or science. For those pursuing graduate studies and research, the second degree is normally the master's or *licence*—at least one year beyond the first degree—and the third is the doctorate, normally requiring at least two additional years beyond the second degree.

In 1968-69 there were 78 degree-granting institutions, 23 of which conferred, almost exclusively, theology degrees. In addition, there were approximately 150 institutions offering university-level courses but not conferring degrees. Full-time university-grade enrolment in the fall of 1968 was 270,093, a 3.4-p.c. increase over the previous year. The tremendous increase in demand for university places in recent years has resulted in a rapidly intensifying crisis in the financing of higher education, and a commission under the chairmanship of Dean Vincent Bladen of the University of Toronto was set up in 1963 by the then Canadian Universities Foundation (now the Association of Universities and Colleges of Canada) to study the financing of higher education in Canada. The Commission presented its report in the fall of 1965; among its recommendations were many referring to increased federal support for the universities.

In addition to the full-time university-grade enrolment, almost as many students are enrolled at the pre-matriculation level or are taking university-grade courses on a part-time basis, either in the evenings, during summer session or by correspondence. The numbers of graduates in most faculties for the academic years ended in 1967 to 1969 are given in Table 10, p. 437.

Trade and Technical Education and Training

Increasing use of automated processes in business and industry is resulting in a shrinking market for unskilled and semi-skilled workers. Early school dropouts are finding it increasingly difficult to get suitable employment and many are now trying to acquire in their adult years the general education or training in the skilled trades that they missed in their youth. Those persons still in the regular school system are tending to remain longer and go farther in the system, partly because of the changing attitudes of society toward education and partly for economic reasons.

Hand in hand with this growing demand for better educational facilities, educators are striving to provide comprehensive programs at all levels to meet the needs not only of the university-bound but also of the great majority who require adequate preparation for early entry into the labour force. It is now accepted that vocational education for adults as well as for youths is a public responsibility which must be provided, as needed, throughout the person's working life. Education of this nature is of national concern and has a direct impact upon material prosperity, the economy and the standard of living.

The pattern of vocational education in Canada varies from province to province and there are variations within the provinces. However, there are three basic types of institutes offering vocational education—secondary schools, trade and occupational training schools and post-secondary institutes of technology. Many municipal school boards provide vocational courses as part of the regular secondary school program in technical or composite-type schools. Students in these schools get some general vocational training or training in certain specific fields, such as typing or auto-mechanics, along with instruction in general academic or cultural subjects.

Trade and occupational training schools, on the other hand, are open only to those who have passed the provincial school-leaving age and have left the regular school system. These schools offer specialized training and their purpose is to develop competent people for a wide variety of occupations. Courses at the trade level do not usually require high school graduation; the grade level demanded, which varies according to province or trade, ranges from grade eight to grade 12.

The third type, the institutes of technology, operate at a higher level of training. Enrolment in the institutes presupposes high school graduation or at least high school standing in such relevant subjects as mathematics and the sciences. Graduates from institutes of technology are awarded diplomas of applied arts or diplomas of technology, and form an essential link between the professionals on the one hand and qualified craftsmen on the other. Most of the institutes of technology and trade schools across Canada are provincially operated.

In addition to the vocational education and training provided by these three types of publicly operated schools, many private business colleges and trade schools offer a wide variety of business, trade and technical courses, some through correspondence. Vocational education is also carried out under a system of apprenticeship training. Such training is given mainly on the job, with classes taken at the trade schools either during the evening or on a full-time basis during the day for periods ranging from three to 10 weeks a year.

Under the Adult Occupational Training Act, the Federal Government takes full responsibility for financing the cost of training adults who are or should be in the labour force. The cost of providing primary, secondary and post-secondary education remains

The Red River Community College in Winnipeg is one of the largest and most up-to-date vocational-academic complexes in Canada, having an enrolment capacity of 5,000 at any one time. The newly completed applied arts building is on the left and the technology building on the right. The administrative offices are in the central structure.

a provincial responsibility. If, in the opinion of a Manpower Counsellor, it is in the best interest of the individual and of the economy for an adult to undertake training or re-training, it will be purchased by the Federal Government from a public or private training institution or from industry.

The program also provides for the payment of allowances to persons who have adult economic responsibilities to enable them to take training but it intentionally avoids the payment of such allowances to youth whose education should normally be provided by the province. Adult trainees who have been three years in the labour force, which includes periods during which employment was being sought, or those who have dependants, are paid these allowances, which range from \$40 to \$103 per week.

The federal-provincial Capital Assistance Program begun under a former agreement has been extended for the benefit of the provinces that were not able to take full advantage of the previous program. This allows for a continued expansion of facilities to carry out a variety of vocational programs. During the period Apr. 1, 1961 to Mar. 31, 1970, projects valued at nearly \$2,162,000,000 were approved which, when all completed, will provide a total of nearly 600,000 new places for students.

How Education Costs are Met

In 1967 about 10 p.c. of Canada's total national income was spent on formal education. Over 20 p.c. of all municipal, provincial and federal revenue went for education and, of the amount so spent, the municipalities provided 26 p.c. and the provinces 52 p.c.

As stated on p. 418, the actual operation of public elementary and secondary schools is in the hands of the local elected or appointed school boards which determine the budgets and therefore the amount of taxes required for school purposes. In most cases, these taxes are levied and collected for the boards by the municipalities; however, in those areas where there is no municipal organization the school boards have the power to levy and collect taxes for school purposes. At present, local governments provide 47 p.c. of the cost of operating the public schools, provincial grants provide 51 p.c. and the remainder is obtained from various other sources. Except in Newfoundland, fees are almost non-existent. Four provinces—British Columbia, Alberta, Manitoba and Nova Scotia—pay operating grants on an equalization formula and thus ensure at least a minimum level of education throughout the province; the standard is determined either in terms of so much per pupil, or from an established salary scale for teachers with a prescribed teacher-pupil ratio, or by some combination of these.

In Newfoundland where municipal organization scarcely exists outside certain larger centres, there are three school-tax areas. Consequently, only about 2.0 p.c. of school revenue is provided by local taxation; the province provides about 90 p.c. and most of the remainder is paid by parents in the form of fees. In Prince Edward Island where there is no municipal organization outside of the cities of Charlottetown and Summerside, the school boards levy and collect property and poll taxes but the province provides about two thirds of the operating costs. Ontario and Saskatchewan make use of various equalization and incentive grants. On Jan. 1, 1967, the New Brunswick Government introduced a Program of Equal Opportunity under which it assumed full responsibility for public education and other social services. Consequently, in the following year, 98 p.c. of the revenue used for public education was derived from provincial taxes (real property and sales taxes); the remaining 2 p.c. came from miscellaneous sources. Most provinces provide grants for school buildings and assist in selling them.

In 1967-68, universities and colleges received 70 p.c. of their current operating funds from provincial governments and the Federal Government, 20 p.c. from fees, 1.4 p.c. from endowments and 8.6 p.c. from other sources. Private schools and colleges are normally supported by student fees, endowment income, gifts, and income from sponsoring bodies.

Federal Contributions to Education

Some 60 Federal Government departments and agencies contribute to education in one way or another. As stated on p. 413, the Federal Government has no responsibility for the organization and administration of education. It has, however, a vital interest in the general level of education and skills of the population and the extent of the scientific research carried on in Canada, realizing the profound effect these factors exercise upon the development of the national economy.

Beginning with the 1967-68 fiscal year, the federal support to education underwent a significant change. The total federal contribution to education was increased substantially but the form of this support and the method of its distribution were altered in certain key areas. There were three important changes. (1) Operating grants to universities and colleges computed in the past at so many dollars per capita of provincial population (approximately \$5) were discontinued and the program replaced by a broader program of financial support to post-secondary education more advantageous to the provinces (explained more fully below). (2) On Mar. 31, 1967, the federal-provincial agreements concluded under the terms of the Technical and Vocational Training Act of 1961 were allowed to expire, except that the agreement for the training of the unemployed was extended to July 1, 1968 and the agreement on financing capital projects was maintained until each province would have received the increased maximum federal contribution stipulated by law. The Federal Government now pays the full cost of vocational training of adults, including living allowances, under the Adult Occupational Training Act (SC 1967, c. 94). (3) The Federal Government announced, in general terms, its willingness to increase grants for specific research projects undertaken by individual professors and other researchers at universities.

In 1968-69, the Federal Government spent \$319,640,000 on vocational training, including the vocational high schools. Of this total, almost \$213,690,000 was spent on training costs and allowances under the Adult Occupational Training Act, and \$3,000,000 was spent under the old federal-provincial agreements, most of it for the training of the unemployed. Expenditures on capital projects amounted to \$105,950,000, including construction costs and equipment for vocational high schools. During the same year, grants for specific research projects in universities amounted to \$86,435,000, about 24 p.c. more than in the previous year. The combined federal expenditures on these two programs amounted to \$406,075,000, an increase of about 7 p.c. over 1967-68.

As a result of the federal-provincial conference of October 1966, the Federal Government undertook to provide increased support to education. Recognizing that education is a provincial responsibility, it decided to discontinue payment of operating grants directly to universities, and to expand its support beyond university education and include in its program all, or almost all, post-secondary education, i.e., the educational institutions and courses requiring for admission at least junior matriculation, or its equivalent, in each province. The provinces were offered the choice of either a federal grant amounting to \$15 per head of population, or 50 p.c. of operating costs of post-secondary education, whichever was greater. Implementing this proposal, Parliament passed, in March 1967, the Federal-Provincial Fiscal Arrangements Act, 1967, under the terms of which certain percentages of federal revenues plus required cash were to be transferred by the federal treasury to the provinces commencing with the 1967-68 fiscal year, and to continue for five years. The financial resources transferred to the provinces for 1967-68 are estimated at \$400,600,000, those for 1968-69 at over \$500,000,000 and those for 1969-70 at about \$620,000,000.

Under the Canada Student Loans Act (SC 1964, c. 24), full-time students may borrow up to \$1,000 annually, interest-free for five years—the \$5,000 or less to be repaid with

interest commencing six months after the student has graduated. Provision is made for the allocated amount to be increased year by year in proportion to the number of persons 18-24 years of age in the population. The purpose of the loan plan is to assist those students who, for financial reasons, would otherwise be prevented from getting a post-secondary education or would not be able to devote full time to their studies. These loans may be made only on the basis of certificates of eligibility issued by the participating province through the university or institute of technology concerned. There is no upper or lower age limit for eligibility. The loan scheme is operated by the chartered banks, the Federal Government guaranteeing the loans and paying the interest while the student is attending college. All provinces except Quebec participate; Quebec offers its own student assistance program for the benefit of Quebec residents.

The Act provides for basic allocations for each province and also for supplementary allocations to compensate for differences in relative demand as between provinces, based on provincial population in the 18-24-year age group. The basic allocations for the year 1968-69 for participating provinces totalled \$55,120,000 with authority for discretionary allocations up to \$12,208,000, making a total maximum of \$67,328,000 authorized under the Act. Loans actually authorized amounted to \$62,576,000. In addition, federal payments to lending institutions in respect of interest on outstanding loans and other operational expenses amounted to \$9,377,000.

Under the Adult Occupational Training Act (SC 1967, c. 94), the Minister of Manpower and Immigration may enter into agreements with provinces to provide for federal contributions in respect of the capital expenditures incurred by the provinces on occupational training facilities, including vocational high schools, technical institutes, trade and occupational centres. Federal contributions amount to 75 p.c. of the cost of approved projects up to a maximum of \$480 per head of the "youth population of the province in 1961", i.e., in the age group 15-19 years. Beyond that limit, federal contributions amount to 50 p.c. for up to an additional amount of \$320 per capita of the youth population. All federal contributions made to the provinces since Apr. 1, 1961, under the terms of the "former agreement" are included in determining the level and limit of the federal contributions in respect of capital projects. There is no time limit stipulated for this program.

The estimated value of all provincial projects approved by the federal authorities during the period Apr. 1, 1961 to Mar. 31, 1969, amounted to over \$1,950,000,000, the federal contribution being almost \$1,029,000,000 when all projects are completed. In the same period, the actual cash payments made by the federal treasury to the provinces amounted to \$812,427,000.

In 1966, the Federal Government inaugurated another program of massive financial support to the provinces for the purpose of providing badly needed facilities for training professional personnel in health services, to be administered by the Department of National Health and Welfare. The Health Resources Fund Act (SC 1966-67, c. 42) provides for the establishment of a fund to assist financially in the planning, acquisition, construction, renovation and equipping of health training facilities, defined to mean any school, hospital or other institution for the training of persons in the health professions or any occupations associated with the health professions, or for the conducting of research in the health field, but excluding any residential accommodation. The Fund was established by the Act in the amount of \$500,000,000 to be applied to costs incurred between Jan. 1, 1966 and Dec. 31, 1980; of that amount, \$300,000,000 was allocated to the provinces on a per capita basis, \$25,000,000 was allocated to the four Atlantic Provinces for joint projects, and \$175,000,000 remained to be allocated by the Governor in Council. Contributions are payable to the provinces in amounts of up to 50 p.c. of the costs of the projects approved by the Minister's

Advisory Committee as part of a five-year plan for the development of health training facilities in a province.

During the three years of operation of this program, 1966-67 to 1968-69, the Federal Government paid \$71,273,000 to the provincial treasuries in respect of approved projects. Most of the projects financed in the first year of the program involved training facilities in universities or institutions connected with, or operated by schools of medicine. However, in 1967-68 and even more so in 1968-69 several projects not connected with universities were financed, such as schools of nursing, including new regional schools of nursing in Ontario, and schools for nursing assistants. In addition to higher education, post-secondary and vocational types of training are beginning to benefit from this program.

The Federal Government through the Canada Council in 1957 provided an amount of \$100,000,000, half of which was to be distributed among the universities for specified building and equipment purposes, similar to the distribution of grants. Interest from the remaining \$50,000,000 was to be used to assist in the development of the arts, humanities and social sciences, mainly through scholarships (see pp. 452-453).

Other contributions are more indirect and include scholarships, research grants and reports or services of value to the schools. Research grants are made by the National Research Council, the Defence Research Board, the Department of National Health and Welfare, the Department of Manpower and Immigration and other agencies. Some Departments, such as Agriculture, Health and Welfare, etc., provide materials and publications of value in the school programs, and the National Museums of Canada, including the National Gallery, the National Film Board and the Canadian Broadcasting Corporation contribute directly or indirectly to various school programs.

More directly, the Federal Government is responsible for the education of Indians on reserves, prisoners in penitentiaries, members of the Armed Services and their dependants and in-service training for permanent personnel. It also assists in citizenship training and other out-of-school informal education activities.

External Educational Assistance

The Canadian International Development Agency is responsible for the operation and administration of the technical assistance program offered by the Canadian Government to developing countries. On June 30, 1970, there were 767 educators working in developing countries under the auspices of CIDA, including teachers, teacher trainers and university staff members working individually or in teams; also in the field were 232 advisers in such areas as health and welfare, engineering, administration and vocational education. On the same date, 1,456 students from developing countries were receiving training in Canada, studying in such fields as agriculture, teacher training, health and natural resources.

During the year ended Mar. 31, 1969, Canada's expenditures abroad on capital projects and technical assistance in aid of education amounted to about \$27,731,900. Capital assistance includes the building and equipping of technical institutions and major projects include six university centres being constructed on the Leeward and Windward Islands as part of the expansion program of the University of the West Indies. The project is part of the five-year, \$5,000,000 program of Canadian assistance to that University begun in 1966. Besides financing the construction of new buildings, it provides scholarships and fellowships for training at UWI and in Canada, as well as Canadian lecturers and professors for the university.

In 1969, CIDA delegated the administration of the Commonwealth Scholarship and Fellowship Plan to the Association of Universities and Colleges of Canada. In August 1970, there were 201 students in Canada under this Plan.

Section 3.—Statistics of Schools, Universities and Colleges

Elementary and secondary schools may be classified as either publicly controlled or private. The publicly controlled schools include: the public and separate schools under local school boards—by far the most numerous group; provincial schools which at this level are limited mainly to trade schools, correspondence courses, and special schools for the blind and deaf; and federal schools for Indians and for the children of members of the Armed Forces overseas. Private schools may be academic, business (commercial), trade, technical, correspondence or even a combination of these.

Institutions of higher education may be provincial, church, independent universities and colleges, or federal military colleges. In addition there are community colleges, teachers colleges, theological institutions and schools for such specialized fields as nursing, agriculture, paper-making, fisheries, textiles, graphic and fine arts, languages, etc. Some of these are provincial and some private.

Table 1 shows full-time enrolment at all levels each year for the period 1960-61 to 1969-70 and Table 2 shows the number of schools, teachers and pupils for all types of education institutions, classified by province, for the school year 1968-69. In all types of schools the number of pupils has increased each year over that period. The increase was first noticed at the elementary level some six years after the birth rate began to rise during the war years. About eight years later the children born during the War were entering high school and four years later they began entering university. The number of teachers is rather closely related to the number of students although the trend is toward larger classes. In contrast, the number of schools remains almost unchanged because the addition of new and larger schools constructed in urban areas has been balanced by the closing of almost all one-room country schoolhouses.

**1.—Full-Time Enrolment in Schools, Colleges and Universities, by Level,
School Years 1960-61 to 1969-70**

¹ Includes enrolments in teachers colleges, diploma schools of nursing and other non-university institutions; enrolments for Quebec are estimated.

² Enrolments for Quebec and British Columbia are estimated.

An attempt has been made to tabulate total expenditure on education, including formal education at all levels, vocational training of all types and also expenditure on cultural activities related to education such as adult night classes, fine arts and handcraft courses, and libraries, museums and art galleries. Such expenditure for the year 1967 is presented in Table 3, classified by source. Details of income of school boards for publicly controlled elementary and secondary schools for the years 1965-67 are given at pp. 434-435 and financial statistics for universities and colleges at pp. 438-439.

Subsection 1.—Elementary and Secondary Schools

Control.—As stated on pp. 414-415, direct control and operation of public schools is by school boards, which operate under school laws and regulations. School boards may be boards of larger units, local boards within larger units or independent boards for rural schools, towns or cities, the members of which may be all elected, partly elected and partly appointed or all appointed; some schools are operated by trustees appointed by the province in lieu of a board. As their designations imply, private schools are administered by private organizations and federal schools by federal authorities.

Table 4 gives the number of active independent public school boards and school trustees in each province as at January 1969.

4.—Active Public School Boards and School Trustees, by Province, as at January 1969

¹ Estimate.

² Includes a central board which administers both Roman Catholic and Protestant schools.

Enrolment.—Table 5 shows enrolment of all elementary and secondary pupils in Canada and in Department of National Defence schools overseas, and classifies them by grade. Private schools and schools for Indian and Eskimo children are included in these figures. Enrolment in private schools accounted for 3.4 p.c. of the total 1967-68 enrolment at the elementary and secondary levels. Schools operated by Federal Government departments, that is, schools for Indian children, schools in the Territories (now under Territorial administration) and overseas schools for children of Service personnel, accounted for about 0.9 p.c. of the total.

School enrolment has been increasing in recent years much more rapidly than the general population. Total school enrolment in 1967-68 represented a 3.4-p.c. increase over the previous year. In comparison, the annual rates of increase in total school enrolment for the three previous years ranged from 3.1 p.c. to 4.1 p.c.; the country's population during the same period increased annually by percentages which varied from 1.7 p.c. to 1.8 p.c.

¹ Estimate.

Teaching Staffs.—Between the school years 1948-49 and 1968-69, the number of teachers in the publicly controlled schools of the ten provinces increased from 81,889 to 236,467, or by 189 p.c.; the number of men teachers increased by 304 p.c. and the number of women teachers by 148 p.c.

After moderate increases from 1948 to 1960, median experience of teachers declined for the following six years, a trend attributable to the large number of new teachers entering the profession. Because most of these new teachers have been employed in the cities, median experience there has declined rapidly from a high in 1946 of 16.4 years in eight provinces (excluding Quebec and Newfoundland) to a low in 1967 of 6.0 years in nine provinces (excluding Quebec). The median experience of all teachers did not show such a pronounced decline, ranging between 6.9 and 8.3 years up to 1960 and then declining to a new low of 6.6 years for nine provinces (excluding Quebec) in 1967.

The median salary in 1968-69 for all teachers (excluding Quebec and Ontario) was \$6,495, representing an increase of 250 p.c. over the median salary in 1948-49 of \$1,855. The rate of increase from one year to the next has fluctuated considerably, ranging from 2.4 p.c. between the school years ended in 1962 and 1963 to 17.2 p.c. between 1967 and 1968.

¹ A teacher teaching both elementary and secondary grades is classified by level according to type of school. If he is teaching in a junior-high school or a junior-senior high school, or if he teaches in more than one school he is counted as a "secondary" teacher. Otherwise, he is counted as "elementary".

Financial Support.—Table 7 shows details of the income of public school boards for the years 1965-67. In most provinces, local taxation is the most important source of revenue, followed by provincial government grants. In 1967 all other sources of income accounted for 2.7 p.c. of total current revenue. (See also p. 424.)

Not all provinces collect and publish figures for debenture indebtedness, although it is the usual practice in all provinces, except Newfoundland, for boards to finance new

construction, at least in part, by issuing debentures. Provincial aid toward capital expenditures may take the form of a percentage of total cost, a fixed amount per classroom or assistance with debenture debt charges. Many provinces guarantee debentures issued by school boards and others assist in marketing them.

7.—Income of School Boards for Publicly Controlled Elementary and Secondary Schools, by Province, 1965-67

NOTE.—The receipts shown in this table do not include any amounts raised by loans or the sale of bonds or debentures as all revenue of this nature must be repaid ultimately with money raised by local taxation.

Subsection 2.—Universities and Colleges

Institutions.—An institution of higher education in Canada is generally defined as one that offers one or more years of work beyond the most advanced high school grade in the province in which it is located, with all or part of the work offered being acceptable for credit toward a university degree or equivalent diploma. The definition thus excludes institutions offering technical and vocational post-secondary courses for which credit is not given.

In 1968-69, there were 78 degree-granting institutions, 23 of which conferred, almost exclusively, theology degrees. In addition, there were approximately 150 institutions offering university-level courses but not conferring degrees.

Enrolment.—Full-time university-grade enrolment continues to increase and it is estimated that enrolment, including that of teachers colleges, will be almost doubled by 1975-76.* Table 8 shows full-time enrolment by province (excluding teachers colleges) for the academic years ended 1966-69. In addition, there were about 104,000 part-time university-grade students (including about 10,500 graduate students) in attendance during the regular 1968-69 winter session, and an estimated 5,000 students take university-grade credit correspondence courses each year. University-grade summer school enrolment in 1968 was almost 99,000.

Foreign enrolment has risen considerably during the past decade, and a larger proportion of the students coming to Canadian institutions are from countries other than the United States and Britain, as shown in Table 9. The United States, Hong Kong, France, Trinidad and Tobago, India and Britain each accounted for over 500 students in the latest year, and Pakistan, Malaysia, Viet-Nam, Jamaica, the Republic of China, Germany, Guyana and Formosa contributed from 200 to 400 each. About 150 countries or territories were represented in the figures.

Finances.—Table 13 gives a 10-year series of the finances of Canadian universities. Since 1954 they have received more than one half of their revenue from government grants and a very small amount from municipal councils. Beginning with the academic year 1951-52 and ending in 1966-67, the Federal Government provided university grants to help meet current operating costs. These grants were originally paid on the basis of 50 cents per head of population in each province and the eligible institutions received their share of the provincial allotment according to the number of full-time students in undergraduate and graduate courses. The rate of grant was increased to \$1.00 per capita in 1956-57, to \$1.50 in 1958-59 and to \$2.00 in 1962-63. In 1966-67, the grants, under a somewhat modified formula, were increased to about \$5.00 per capita. The Province of Quebec did not accept this grant for the years up to 1955-56. From 1956-57 to 1959-60 the payments refused by Quebec were held in trust by the Canadian Universities Founda-

tion (now the Association of Universities and Colleges of Canada), which administers the fund. In 1960-61, the Quebec Government and the Federal Government negotiated a new tax-sharing agreement under which Quebec provided its own grants and was reimbursed by an abatement of corporation tax. Commencing with 1967-68 the Federal Government discontinued paying grants directly to universities. Instead, the government agreed to transfer to the provinces financial resources (certain portions of federal revenues and required cash payments) equal to either \$15.00 per capita or 50 p.c. of the operating costs of post-secondary education, whichever is the greater. The financial resources so transferred are disbursed by provincial governments at their discretion. (See also p. 424.)

The Federal Government also provides assistance to universities through the University Capital Grants Fund which is administered by the Canada Council. The original amount in the fund was \$50,000,000 (interest and profits to Mar. 31, 1969 increased it to over \$68,346,000), to be granted in amounts not exceeding 50 p.c. of specific building or capital equipment projects, having regard to the population of each province. Up to the end of March 1969, a total of over \$68,000,000 had been authorized. Grants are paid in four equal instalments spread over the period of construction, so that there is a time lag between approval and payment. On Mar. 31, 1969, there remained a balance of unpaid grants totalling \$2,870,000 for construction projects still in progress. Any interest earned on that amount during 1969-70 would be distributed on Mar. 31, 1970. The Canada Council was also endowed with an additional \$50,000,000 (increased by \$10,000,000 Apr. 3, 1965), the interest on which is available for the provision of scholarships or other assistance in the fields of the arts, humanities and social sciences (see pp. 452-453).

13.—Current Income and Expenditure of Universities and Colleges, Academic Years Ended 1959-68

Academic Year Ended—	Current Income					Total Current Expenditure
	Endowments and Investments	Government Grants	Student Fees	Miscellaneous	Total

1968.....	10,228	521,084	144,490	64,780	740,582	738,510

Subsection 3.—Vocational Education

Table 14 summarizes the data on full-time vocational training classes. The duration of these classes may vary from three weeks taken annually by indentured apprentices at provincially operated trade schools, to three-year vocational high school courses or post-secondary courses offered in provincial institutes of technology. Numerous skills are taught, ranging from short courses in welding or typing to extended courses for instrument technicians or aircraft maintenance men. Students taking two-year or three-year vocational courses in public secondary schools may, upon completion, enter employment or may continue other formal training in a trade school or an institute of technology.

In addition to the full-time vocational courses, a great variety of part-time instruction is offered by both public and private institutions as an alternative to full-time training or as an attraction to the individual interested in a hobby.

Subsection 4.—Adult and Correspondence Education

Throughout the years, the interest of adults in furthering their education has gained increasing impetus until today the provision of evening, extension and correspondence courses in a wide variety of subjects is an important part of the educational system. In the newly designated "community colleges", courses for adults are given in such subjects as engineering, home economics, agriculture, biology, business administration, applied and fine arts and a number of the technologies as well as vocational courses in such trades as hairdressing, automobile mechanics, plumbing, construction, etc., all of them made full use of by adults eager to increase their knowledge. Large numbers of adults also take advantage of the many courses made available by school boards, ranging from those leading to matriculation to courses involving individual and community concerns. Universities have in the past provided extension courses in many subjects but since many such courses are now administered by the community colleges, the situation with respect to them is at present under review. Universities continue to receive applications in increasing volume from adults anxious to work on a degree, extend their post-graduate studies or enrol for advanced courses in their own field.

The latest DBS survey on correspondence education in Canada includes reports from provincial government correspondence schools, institutes of technology, universities, privately operated trade and commercial schools, and business and professional associations. These five major groups reported a total enrolment of 121,632, largely adult, for the academic year 1967-68, distributed as follows: provincial government correspondence schools, 87,962; institutes of technology, 1,809; universities, 16,048; private trade schools and business colleges, 4,575; and associations, 11,238. Correspondence study is of particular value

to the ill and handicapped and also provides an opportunity for prisoners to continue their education. Universities report considerable activity in this area; most of the students are enrolled in diploma certificate courses, many of which are offered for associations. However, there are indications, particularly over the past three years, that enrolment in correspondence courses for credit toward a university degree or university diploma is gradually decreasing.

PART II.—CULTURAL ACTIVITIES RELATED TO EDUCATION

Section 1.—The Arts and Education

Fine Art Schools, Galleries and Organizations

Fine art (architecture, painting and drawing, commercial and decorative arts, graphics, ceramics and sculpture) appears as an elective subject of the faculty of arts in a number of universities, where it may be taken as one of five, six or more subjects for a year or two. Eight universities offer a Bachelor of Fine Arts degree:—

Mount Allison University, Sackville, N.B.
 Sir George Williams University, Montreal, Que.
 University of Windsor, Windsor, Ont.
 University of Manitoba, Winnipeg, Man.
 University of Alberta, Edmonton, Alta.
 University of Calgary, Calgary, Alta.
 University of British Columbia, Vancouver, B.C.
 University of Victoria, Victoria, B.C.

Twelve universities offer a Bachelor of Arts degree with a major in fine art:—

Université de Moncton, Moncton, N.B.
 McGill University, Montreal, Que.
 Sir George Williams University, Montreal, Que.
 University of Ottawa, Ottawa, Ont.
 University of Toronto, Toronto, Ont.
 York University, Toronto, Ont.
 McMaster University, Hamilton, Ont.
 University of Guelph, Guelph, Ont.
 University of Western Ontario, London, Ont.
 University of Windsor, Windsor, Ont.
 University of Saskatchewan, Saskatoon and Regina, Sask.
 University of British Columbia, Vancouver, B.C.

There are many schools of art with varying academic requirements for admission. These offer diploma or certificate courses and are concerned largely with the technical development of the artist. Among those widely known are:—

Nova Scotia College of Art, Halifax, N.S.
 École des Beaux-Arts, Quebec, Que.
 École des Beaux-Arts, Montreal, Que.
 Institut des Arts Appliqués, Montreal, Que.
 School of Art and Design, Montreal Museum of Fine Arts, Montreal, Que.
 Humber College of Applied Arts and Technology, Toronto, Ont.
 Ontario College of Art, Toronto, Ont.
 Three Schools in Toronto, Ont.—
 Artists' Workshop
 Hockley Valley School
 The New School of Art

Sheridan College of Applied Arts and Technology, Brampton, Ont.
 Doon School of Fine Arts, Kitchener, Ont.
 University of Manitoba School of Art, Winnipeg, Man.
 School of Art, Regina Campus, University of Saskatchewan, Regina, Sask.
 Alberta College of Art, Calgary, Alta.
 Banff School of Fine Arts, Banff, Alta.
 Southern Alberta Institute of Technology, Calgary, Alta.
 Kootenay School of Art, Nelson, B.C.
 Capilano College, Vancouver, B.C.
 Vancouver School of Art, Vancouver, B.C.
 University of Victoria, Victoria, B.C.

Courses in these schools vary in length with the requirements of the individual student but may extend over as many as four years. In some of these schools fine crafts as well as fine arts are taught. Summer schools of art are sponsored by some of the foregoing institutions, by universities and by various independent groups. One of the more important summer schools is the Banff School of Fine Arts, affiliated with the University of Calgary.

Public art galleries in the principal cities perform valuable educational services among adults and children. Children's Saturday classes, conducted tours for school pupils and adults, radio talks, lectures and concerts are features of the programs of the various galleries. Many of these institutions supply their surrounding areas with travelling exhibitions and some range even farther afield. Several organizations such as the Maritime Art Association, the Atlantic Provinces Art Circuit, the Western Canada Art Circuit, the Art Institute of Ontario, the Art Gallery of Ontario and the new *Fédération des centres culturels du Québec* have been founded to carry out this sort of travelling program on a regional basis. On a smaller scale, art circuits are organized to serve certain areas such as those around St. John's, Nfld., Charlottetown, P.E.I., Trois-Rivières and Hull, Que., and Winnipeg, Man. The National Gallery of Canada conducts a nation-wide program of this nature and is one of the largest circulating agencies in North America (see p. 443). Several galleries maintain an art-rental service.

Among the principal public art galleries are:—

Fathers of Confederation Art Gallery and Museum, Charlottetown, P.E.I.
 Beaverbrook Art Gallery, Fredericton, N.B.
 The New Brunswick Museum, Saint John, N.B.
 Musée du Québec, Quebec, Que.
 Montreal Museum of Fine Arts, Montreal, Que.
 Musée d'Art Contemporain, Montreal, Que.
 National Gallery of Canada, Ottawa, Ont.
 Art Gallery of Ontario, Toronto, Ont.
 Art Gallery of Hamilton, Hamilton, Ont.
 Kitchener-Waterloo Art Gallery, Kitchener, Ont.
 Public Library and Art Museum, London, Ont.
 Sarnia Public Library and Art Gallery, Sarnia, Ont.
 Willistead Art Gallery, Windsor, Ont.
 Winnipeg Art Gallery, Winnipeg, Man.
 Mendel Art Gallery, Saskatoon, Sask.
 Moose Jaw Art Gallery and Museum, Moose Jaw, Sask.
 Edmonton Art Gallery, Edmonton, Alta.
 Vancouver Art Gallery, Vancouver, B.C.
 Art Gallery of Greater Victoria, Victoria, B.C.
 Art Gallery of Victoria, Victoria, B.C.

Other important collections of art are housed in arts councils and university galleries. Among the university galleries are:—

St. John's Memorial University Art Gallery, St. John's, Nfld.
 Anna Leonowens Gallery, Nova Scotia College of Art, Halifax, N.S.
 Dalhousie University Art Gallery, Halifax, N.S.
 Creative Art Centre of the University of New Brunswick, Fredericton, N.B.

Owens Museum of Fine Arts, Mount Allison University, Sackville, N.B.
 Université de Moncton, Moncton, N.B.
 Séminaire des Clercs de St-Viateur, Joliette, Que.
 Université Laval, Quebec, Que.
 Loyola of Montreal Museum, Montreal, Que.
 McGill University, Montreal, Que.
 Sir George Williams University Art Gallery, Montreal, Que.
 Carleton University, Ottawa, Ont.
 Agnes Etherington Art Centre, Queen's University, Kingston, Ont.
 Hart House, and Sigmund Samuel Canadiana Gallery of the University of Toronto,
 Toronto, Ont.
 York University, Toronto, Ont.
 University of Waterloo Art Gallery, Waterloo, Ont.
 McIntosh Memorial Art Gallery, University of Western Ontario, London, Ont.
 University of Manitoba, Winnipeg, Man.
 Norman Mackenzie Art Gallery of the University of Saskatchewan, Regina, Sask.
 University of Saskatchewan, Saskatoon, Sask.
 University of Alberta, Edmonton, Alta.
 University of Calgary, Calgary, Alta.
 Fine Arts Gallery of the University of British Columbia, Vancouver, B.C.

Five of the more important galleries connected with arts councils are the St. Catharines and District Arts Council, St. Catharines, Ont., the Glenhyrst Arts Council, Brantford, Ont., the Department of Fine Arts, McMaster University, Hamilton, Ont., the Brandon Allied Arts Centre, Brandon, Man., and the Art Gallery of the Calgary Allied Arts Centre, Calgary, Alta.

Among the leading fine art organizations of national scope, exclusive of museums and art galleries, are:—

Association of Canadian Industrial Designers
 National Design Council
 Canadian Conference of the Arts
 Canadian Craftsmen's Association
 Canadian Society for Education through Art
 Canadian Group of Painters
 Canadian Guild of Potters
 Canadian Handicrafts Guild
 Canadian Museums Association
 Canadian Society of Graphic Art
 Canadian Society of Painter-Etchers and Engravers
 Canadian Society of Painters in Water Colour
 Canadian Society of Landscape Architects
 Federation of Canadian Woodcarvers
 Royal Canadian Academy of Arts
 Royal Architectural Institute of Canada
 Sculptors' Society of Canada
 Town Planning Institute of Canada
 Canadian Centre for Films on Art
 Community Planning Association of Canada.

The National Gallery of Canada.—The beginnings of the National Gallery of Canada are associated with the founding of the Royal Canadian Academy of Arts in 1880. The Marquess of Lorne, then Governor General, had recommended and assisted the founding of the Academy and among the tasks he assigned to that institution was the establishment of a National Gallery at the seat of government. Until 1907 the National Gallery was under the direct control of a Minister of the Crown but in that year, in response to public demand, an Advisory Arts Council consisting of three laymen was appointed by the Government to administer grants to the National Gallery. Three years later, the first professional curator was appointed.

In 1913, the National Gallery was incorporated by Act of Parliament (RSC 1952, c. 186) and placed under the administration of a Board of Trustees appointed by the Governor General in Council; its function was to encourage public interest in the arts and to promote the interests of art throughout the country. Under this management, the Gallery increased its collections and developed into an art institution worthy of international recognition. Today, a Board of Trustees, reporting to the Secretary of State, administers all the National Museums of Canada, including the National Gallery. In 1960, the Gallery entered a new era in its history when the entire national collection and the staff and equipment necessary to its maintenance were transferred to new modern quarters—the Lorne Building in downtown Ottawa—which provides adequate well-lighted space for hanging the permanent collection and for displaying travelling exhibitions.

The Gallery's collections have been built up along international lines and give the people of Canada an indication of the origins from which their own tradition is developing. The collection of Canadian art, the most extensive and important in existence, is continually being augmented by the purchase of works from the Biennials of Canadian Art and other sources. The collections include many Old Masters, among which are twelve acquired from the famous Liechtenstein collection; extensive war collections; the Massey collection presented to the Gallery during 1946-50 by the Massey Foundation; a growing collection of contemporary art; prints and drawings; and diploma works of the Royal Canadian Academy. The prints and drawings collection consists of more than 5,000 items. The services of the Gallery include the operation of a reference library open to the public, which contains more than 10,000 volumes and periodicals on the history of art and other related subjects.

The National Conservation Research Laboratory, established in 1964, provides technical information on works of art from public and private collections across Canada and is responsible for the conservation of the national art collections. In addition, research is carried out on the effects of environment on works of art and on the durability of artists' materials.

An active program of exhibitions, lectures, films and guided tours is maintained for visitors to the Gallery in Ottawa. The interests of the country as a whole are served by circulating exhibitions, lecture tours, publications, reproductions and filmstrips prepared by the National Gallery staff. Promotion of and information on art films are handled by the Canadian Centre for Films on Art and their distribution by the Canadian Film Institute. The Gallery promotes interest in Canadian art abroad by participating in international exhibitions such as the Biennials of Venice, São Paulo and Paris, and by preparing major exhibitions of Canadian art for showing in other countries. At the same time, it brings important exhibitions from abroad for circulation in Canada.

Performing Arts Schools.—Degree courses in music, the most widespread of the performing arts (which also include opera, drama, ballet and dance) are offered at a number of Canadian universities, listed as follows:—

- St. Francis Xavier University, Antigonish, N.S.—B.A. major
- Dalhousie University, Halifax, N.S.—B. Mus. Ed.
- Mount Saint Vincent, Halifax, N.S.—B.A. (mus.)
- Acadia University, Wolfville, N.S.—B.A. major, L. Mus., and B. Mus.
- Mount Allison University, Sackville, N.B.—B.A. major, B. Mus., B.M. Ed.
- Université de Moncton, Moncton, N.B.—B.A. (mus.)
- Université Laval, Quebec, Que.—L. Mus., B. Mus., D. Mus.
- McGill University, Montreal, Que.—L. Mus., B. Mus., M.M.A. (musical arts)
- Université de Montréal, Montreal, Que.—L. Mus., B. Mus., and D. Mus.
- Carleton University, Ottawa, Ont.—B.A. (mus.)
- Queen's University, Kingston, Ont.—B. Mus., B.A. major
- University of Toronto, Toronto, Ont.—B. Mus., B.A. (mus.), Art. Dip. Mus., Lic. Dip. Mus., Mus. Bac. (performance), Mus. Bac. (history, literature, composition, education), Mus. M., M.A. (musicology), Mus. Doc., Ph.D. (musicology)
- McMaster University, Hamilton, Ont.—Mus. Bac.

University of Western Ontario, London, Ont.—B.A. major, Mus. B., M.A. (musicology), and Mus. M.
 University of Windsor, Windsor, Ont.—B.A. (mus.) and B. Mus.
 University of Manitoba, Winnipeg, Man.—B.A. major, A.M.M., L.M.M. and B. Mus.
 Brandon University, Brandon, Man.—B. Mus. (education or performance)
 University of Saskatchewan, Regina, Sask.—A.M.U.S., L.M.U.S., B. Mus., B. Mus. Ed.
 University of Saskatchewan, Saskatoon, Sask.—B.A. major, B. Mus., B. Mus. Ed.
 University of Lethbridge, Lethbridge, Alta.—B.A. (mus.)
 University of Alberta, Edmonton, Alta.—B. Mus. and M. Mus.
 University of Calgary, Calgary, Alta.—B. Mus.
 University of British Columbia, Vancouver, B.C.—B.A. major, B. Mus. and M. Mus.
 University of Victoria, Victoria, B.C.—B. Mus., M. Mus., Ph.D. (mus.)

Advanced instruction in music is also given at the Conservatoire de Musique et d'Art Dramatique in both Montreal and Quebec. Opera may be studied at the Royal Conservatory Opera School of the University of Toronto where advanced students work in close collaboration with the Canadian Opera Company and also at the Conservatoire de Musique et d'Art Dramatique and at the Banff School of Fine Arts (summer) at Banff, Alta., an affiliate of the University of Calgary.

Degree courses in drama are offered at the following universities:—

Université de Moncton, Moncton, N.B.—B.A. (art dramatique)
 Sir George Williams University, Montreal, Que.—B.F.A. (drama)
 Queen's University, Kingston, Ont.—B.A. (drama)
 University of Toronto, Toronto, Ont.—M.A. (drama)
 University of Windsor, Windsor, Ont.—B.A. (drama), B.F.A. (dramatic art)
 University of Saskatchewan, Regina, Sask.—B.F.A. (drama)
 University of Saskatchewan, Saskatoon, Sask.—B.A. (drama), M.A. (drama)
 University of Alberta, Edmonton, Alta.—B.A. (drama), M.A. (drama), B.F.A. (drama), M.F.A. (drama, design or directing)
 University of Calgary, Calgary, Alta.—B.F.A. (drama)
 University of British Columbia, Vancouver, B.C.—B.A. (theatre), M.A. (theatre)
 University of Victoria, Victoria, B.C.—B.F.A. (theatre)

Advanced instruction in drama is also given during the summer at the Banff School of Fine Arts. The National Theatre School of Canada offers complete practical training for talented students. It is bilingual, courses being held at Montreal, Que., from October to June. Three years are required for the acting course and two for technical and production studies.

The National Ballet School at Toronto is the only residential ballet school in Canada. It offers academic studies together with practical instruction. Professional instruction is also offered by two other major Canadian ballet companies, Les Grands Ballets Canadiens, Montreal, and the Royal Winnipeg Ballet, Winnipeg, and advanced ballet training is given during the summer at the Banff School of Fine Arts.

Museums

The museums of Canada, as elsewhere, range from small, locally gathered, historical artifacts and objects to large government-operated institutions which collect, classify and display such objects as may be necessary to study and disseminate knowledge of natural history, human history, science and technology, with special but not exclusive reference to Canada. Many of these larger museums, especially the National Museums of Canada and the Royal Ontario Museum, have a long, distinguished heritage in research and publication of scholarly works and serve an important role as educational and cultural centres. In this area they have an advantage over other agencies of education in that they are able to provide, for study and exhibition, actual, original objects as well as descriptions and pictures of such objects. They offer many educational services to the public through

exhibits, guided tours, lectures and scientific and popular publications. The following museums have staff members who are specifically charged with organizing programs in education and providing extension services:—

Nova Scotia Museum, Halifax, N.S.
McGill University Museums, Montreal, Que.
National Museums of Canada, Ottawa, Ont.
Royal Ontario Museum, Toronto, Ont.
Saskatchewan Museum of Natural History, Regina, Sask.

Other museums that conduct educational and extension programs using the regular curatorial and administrative staff are:—

The New Brunswick Museum, Saint John, N.B.
Museum of the Province of Quebec, Quebec, Que.
The Manitoba Museum, Winnipeg, Man.
Provincial Museum of Natural History and Anthropology, Victoria, B.C.

Direct work with schools may involve the holding of classes within the museum or visits of museum lecturers, with exhibits, to the schools. More informal are the guided tours for visiting school classes, the lending of specimens, slides, filmstrips or motion picture films to schools, and the training of student-teachers in the educational use of the museum. A number of museums have special programs for children not directly associated with school work including Saturday lectures and film showings, activity groups, nature clubs and field excursions. At the higher educational level, museum field parties provide research training to university students in many disciplines and museum staffs act as professional consultants, answer a host of enquiries on scientific and technical subjects, and serve as consultants or advisers to foreign scholars and institutions.

For adult laymen, museums offer lectures, film showings and guided tours, the latter usually available throughout the year. Staff members may be sent to give lectures to service clubs, church groups, parent-teacher associations and hobby clubs. The latter, such as naturalists' groups, mineral clubs and astronomy societies, may use the museum as their headquarters. Travelling exhibits are prepared for showing at local fairs, historical celebrations and conventions. At least seven Canadian museums have conducted regular radio or television programs and others have made occasional contributions. Some historical museums stage annual events during which the arts, crafts or industries represented by the exhibits are demonstrated to the public.

The National Museums of Canada.—The National Museums originated in the Geological Survey of Canada and their early history is inseparable from that institution. The first united Parliament of Upper and Lower Canada met in Montreal in 1841. In July of that year, the Natural History Society of Montreal and the Literary and Historical Society of Quebec petitioned the government to carry out a geological survey. As a result, a resolution was passed in the Estimates of Sept. 10 to defray the expenses of a geological survey of the Province of Canada.

William E. Logan was appointed the first director of the Geological Survey in 1842. He and his assistant, Alexander Murray, undertook their first field work in 1843, and their collections formed the humble beginnings of the National Museums. Logan was much more than a geologist and his interests extended to other branches of natural science. His diaries contain accurate drawings of named plants. He wrote in his annual report for the year 1852-53: "It may be a consideration whether a growing country like Canada could not afford to anticipate what future importance may require in the nature of a national museum and at some future time not far distant, erect an appropriate edifice especially planned for the purpose".

In the meantime, the officers of the Geological Survey continued to collect for the geological museum. In 1856 Elkanah Billings, a palæontologist and the first of a number

of specialists, was added to the staff. Legislation passed that same year to continue the work of the Geological Survey specified the establishment of a geological museum open to the public to exhibit specimens, books and instruments.

In 1874 the practice of recording the number of visitors to the museum was started; from May 1874 to April 1875 the number of visitors was 1,017 and by April 1896 it had reached 31,595 annually. In 1874 the distribution of specimens of minerals, rocks and other natural history objects to schools was started with a donation to the Board of School Teachers of Elora, Ont. The first organized museum lecture program was undertaken in 1912 with a series of lectures for young people after school. By 1915, Saturday morning lectures for children and evening lectures for adults—both features of the museum program today—were in operation. Prior to 1880 the museum occupied several buildings in Montreal, but that year the Geological Survey moved to Ottawa and moved into the former Clarendon Hotel on Sussex Street. Construction of the Victoria Memorial Museum building was started in 1904 and six years later the Geological Survey moved in.

The scope of the museum was enlarged in the Act of Apr. 28, 1877 "to make better provision respecting the Geological and Natural History Survey of Canada and for maintenance of the museum in connection therewith". In that Act the survey was instructed "to study and report upon the flora and fauna of the Dominion" and "to continue to collect the necessary material for a Canadian museum of natural history, mineralogy and geology". As early as the Act of 1856 the Geological Survey of Canada had been authorized to "from time to time" distribute publications relative to the survey. From this authority developed the museum's series of scientific bulletins presenting the researches of its staff.

The Act of 1877 established the Geological Survey and the museum on a continuing basis and permitted the appointment of specialists in natural history. John Macoun was appointed to establish the division of biology in 1882. He was an eminent botanist who had accompanied the expedition of Sanford Fleming to explore Western Canada in 1871. Macoun's report of 1874 laid the groundwork for the establishment of western Canadian agriculture. He also published a catalogue of Canadian birds. In 1895 under the third director of the Geological Survey, George M. Dawson, the museum entered the field of Canadian anthropology.

In 1910 the museum began an expanded program of research and exhibition under the direction of R. W. Brock, then director of the Geological Survey of Canada. Unfortunately this program was curtailed during the first World War because the burning of the Parliament Buildings in 1916 forced Parliament to occupy the museum building until 1919. Later, expansion of the exhibition halls was handicapped by the museum sharing its building with the National Gallery of Canada and the Geological Survey of Canada. In 1927 the Governor General in Council gave authority "to designate the museum branch of the Department of Mines as the National Museum of Canada". In 1956 the museum was divided into two branches, the Museum of Natural History and the Museum of Human History. Ten years later, a third branch, the Museum of Science and Technology, was formed. On Apr. 1, 1968, the National Museums Act was proclaimed by Parliament which brought the three branches of the National Museum of Canada and the National Gallery of Canada under the National Museums Corporation.

The Act specified a 14-member board of trustees with over-all responsibility for policy and operations of the National Museums of Canada. The Board includes a chairman and a vice-chairman, each appointed for a five-year period. The other members are appointed for terms ranging from two to four years each. The new Act also created the position of secretary-general with responsibility for the financial and administrative arrangements of the museums. The names for the three museums were changed—the Natural History Branch became the National Museum of Natural Sciences; the Human History Branch, the National Museum of Man; and the Science and Technology Branch, the National Museum of Science and Technology. The name of the National Gallery of Canada remained unchanged.

The responsibilities of a great museum include collecting, preserving and storing objects related to the various disciplines within its area of activities. Of equal importance is the research carried out by specialists in these fields and the publication of their findings. Museums exhibit artifacts from their collections in attractively designed displays to illustrate the scientific origins of the various subjects. This, however, is only part of a museum's extensive education program, which extends to lectures, publications, enquiries, consultations, workshops, guided tours for children and adults alike, travelling exhibits, loans, library services and radio and television programs. The National Museums of Canada present all these facets for the enjoyment and education of the people of Canada.

During the year ended Mar. 31, 1969, the National Museum of Natural Sciences and the National Museum of Man together recorded 301,094 visitors, the National Museum of Science and Technology 405,808 visitors and the National Gallery 428,462 visitors; the Canadian War Museum, which is part of the Museum of Man, and the National Aeronautical Collection, which is part of the Museum of Science and Technology, had 284,217 and 101,751 visitors, respectively. In all, some 1,135,364 persons visited the four museums.

Recent activities in the Museum of Natural Sciences, the Museum of Man and the Museum of Science and Technology are outlined in the following paragraphs; the responsibilities of the National Gallery are discussed on pp. 443-444. The staff common to the four institutions—concerned with exhibition and educational, technical, administrative and financial functions—totalled 377, including five executive, 91 scientific and professional, 131 administrative and administrative support, 83 general technical and 40 operational employees; an additional 27 casual employees were on staff during the year.

An important development in 1969 was the decision to completely renovate the Victoria Museum Building in Ottawa, as well as most of the Museum of Natural Sciences and the Museum of Man exhibits which had been housed in that building for many years. The Museum of Science and Technology, in existence only since 1967, is located in a building in east Ottawa, specially designed for the purpose.

The National Museum of Natural Sciences contains divisions of botany, zoology, geology and palaeontology. During the year 1968-69, more than 275,000 specimens were added to its collections as a result of field trips, purchases, donations and exchanges. Particularly noteworthy was the donation of the valuable Johannsen collection of shells which comprises 5,500 specimens arranged in display cases.

The Museum staff was engaged during the year in 65 major research projects and 25 projects of lesser import. Field research included 35 different expeditions and excursions in widely scattered locations ranging from Baffin Island, the Mackenzie delta and Alaska in the north, to Florida, Panama, the Caribbean, the Sargasso Sea and Tierra del Fuego in the south. This work gave support to such research enterprises as the Polar Continental Shelf Project and the *Hudson* and *Sackville* expeditions undertaken by the Department of Energy, Mines and Resources. The Museum supported 24 projects undertaken in universities by staff members or by research associates and provided financial assistance, research facilities and field work for three National Research Council postdoctoral fellows.

The staff generally was intensively engaged in planning the new display halls that will be built into the renovated Victoria Museum Building, an activity that has been given very high priority in order to enable the Museum, at the earliest possible date, to more completely fulfil its mandate to inform and educate the public. An exhibit of 13 cases of minerals from the national mineralogical collection was prepared and placed on display temporarily in Logan Hall of the Geological Survey of Canada.

The Canadian Oceanographic Identification Centre of the Museum processed about 350,000 specimens during the year, mainly for other departments of government. Thirty-five publications were issued and as many more were in preparation for publication, and two short films were produced by the Zoology Division.

The National Museum of Man contains divisions of archaeology, folklore and history, and ethnology, as well as the Canadian War Museum. During 1969, the Archaeological Division dug some 60 sites in Canada and surveyed and tested other areas. The History Division, with the help of nine contractees, conducted research into the politics and economics of New France, the Indians of Western Canada, the industrial history of Nova Scotia, the social history of Lower Canada, the status of women in Upper Canada, and the explorations of arctic and subarctic Canada. The Folklore Division issued 20 research contracts that related to the folklore of Canadian ethnic groups and staff members undertook studies of Icelandic, German, and French-Canadian material in Western Canada. Ethnology Division officers did field studies with the Golden Lake Algonquins, the Odnak Abenakis, the Alert Bay Kwakiutl, the Carrier-Chilcotin people of British Columbia, and the Cree and Chipewyans of northern Saskatchewan. Additional contracts were issued to do salvage work in Canadian ethnology and linguistics and for curatorial work on the collections.

The renovation of the Victoria Museum Building required the removal of three divisions of the Museum of Man to other quarters and the stripping of most of the old exhibition halls. The staff was involved in a major planning effort to ensure that the exhibits in the expanded and renovated museum would be compatible with the newest techniques, that they be informative, and that they represent all the major disciplines of the Museum of Man.

Among the more successful of the exhibits on display in 1969, mention should be made of the "Masterpieces of Indian and Eskimo Art from Canada", which was very well received in Paris and in Ottawa. A special exhibit of Ukrainian folk art attracted 10,000 visitors on Easter weekend. During the year, display materials were lent to many institutions for temporary exhibit. Staff scientists attended a number of national and international conferences and were invited to lecture in several centres. They also served as consultants and advisers for other institutions and countries. During the year they published seven monographs and 38 other publications dealing with their studies of Canada, and 30 other manuscripts were in preparation for publication.

The Canadian War Museum, which is part of the National Museum of Man, was opened to the public in 1942. However, its space was limited until 1967 when it was moved to larger quarters and was able for the first time to show articles of war that had been gathered and kept in storage for decades. The Museum collects and displays artifacts of Canada's military past. Most of the material is Canadian but some is from other countries whose military history has been linked at some time with Canada. Many of the artifacts are gifts from individuals. The oldest article in the Museum is a Viking sword which may date from the last half of the 10th century. During 1969, a considerable number of articles were added to the collections, including vehicles, uniforms, medals, and historical films. Also, two notable exhibits were opened: the "D-Day" diorama, an exact 24-foot-scale model of the Canadian landing in France, was opened on June 6, the 25th anniversary of the event, and the Museum's first travelling exhibit, "Canada and the First World War", was first shown to the public at the Centennial Museum in Vancouver.

The National Museum of Science and Technology has the function of a cultural-educational institution, designed to bring scientific literacy to the visiting public and to familiarize them with the language, events and history of science. In the museum, visitors are confronted principally by demonstrations of scientific principles and displays which, by means of artifacts and texts, correlate these principles with the development of technology. All this is done with particular emphasis on the technologies of ground transportation, aviation, agriculture, shipping and industrial technologies which have been so closely fused to the history of this nation.

The Museum displays are colourful and inventive, designed to involve people in the learning process. Visitors are asked to participate in experiments and in making things work; to explore the technological park; to ride in a double-decker bus or to ride down a

track in a gondola car; to push a button or wind a crank to learn some physical law; or to sit in the driver's seat of a giant steam locomotive or a farm tractor. Museum collections are made available to other museums in Canada and abroad, with a view to bringing the story of science and technology to the widest audience possible. The National Aeronautical Collection is located in aircraft hangars at Rockcliffe, east of Ottawa. There are displayed some 50 of Canada's national collection of about 80 aircraft, together with engines and other artifacts relating to the development of aviation, so important in Canada and to which so many Canadian contributions have been made.

The Museum sponsors lectures on the history of science and technology by known authorities. A systematic program of school tours for children in Ontario and Quebec has been developed to fit in with curriculum requirements. Broadly speaking, all programs are built around three general themes relating to national development—how man has overcome space and time in this vast land by various methods of transportation and communication; how man has changed his environment with science and technology and the tools he has built and used; and how man's living habits have changed as he moved from sod hut and log cabin existence to his present sophisticated environment. The Museum is planning publications to expand the content of its exhibits and to give popular accounts of Canadian scientific and technological achievements. Because the emphasis in the Museum is on being a bright, alert and lively showplace of the development and trends in modern science, new exhibits and temporary exhibits are added each year, making an approximate 20-p.c. change.

Thus, the National Museum of Science and Technology of Canada is in the vanguard of modern museums throughout the world which are emphasizing cultural-educational functions in lieu of traditional museum functions. Visitors to this Museum can have a meaningful experience in Canadian scientific and technological developments as well as in world advancements in these fields.

Section 2.—Educational Functions of the Canadian Broadcasting Corporation

The educational activities of the CBC take several different forms: radio and television programs for schools; instruction programs for adults; general information programming for children and adults; and the sale of a variety of publications, recordings, audiotapes and films derived from broadcast material.

School Broadcasts.—The CBC provides facilities and production assistance for radio and television school programs at primary and secondary school levels. These programs are broadcast in the general program services of the CBC but are intended for classroom use.

Programs for national distribution are designed as enrichment material and are based on elements common to all provincial curricula. They are planned in co-operation with a special committee of the Council of Ministers of Education, including representatives of the teaching profession. To date, the CBC has paid the entire cost of the national school programs. At the provincial level, programs follow provincial school curricula closely and are planned in co-operation with the various provincial departments of education. They are financed on a cost-sharing basis.

In the course of a year, CBC radio and television carry some 4,000 school programs. Subjects dealt with in the English services in 1969-70 included science, communications, music, theatre, social institutions, Canadian literature and history, and the lives of children in other countries. Programs in the French services included music, language, science, physical education and junior art work.

Special Arrangements.—Since broadcasting facilities fall under federal jurisdiction and education under provincial authority, the CBC was asked to act as licensee for a proposed UHF television station in Toronto to carry programs of the Ontario Department

of Education. The station application was approved by the CRTC in January 1970, with a proposed opening date in the autumn. By agreement between the CBC and the OED, the CBC would provide, operate and pay (on a fully recoverable basis) for the transmitter, antenna and associated technical facilities, while the Department would supply and pay for all programs.

Another co-operative arrangement involves CBXFT, the CBC's French-language television station in Edmonton which opened in March 1970. The station leases about 40 hours a week of its program time to the Metropolitan Edmonton Educational TV Association (MEETA). During some periods of the day the station carries the regular French network programming of the CBC. At other times, it transmits the English-language educational programs prepared and presented by MEETA, representing the Alberta Department of Education, the Edmonton public and separate school boards, the University of Alberta and school boards in surrounding areas. This arrangement is to continue for a period of up to three years.

Courses for Adults.—The CBC French services, radio and television, offer a number of adult education courses in conjunction with university authorities. Subjects for 1969-70 included French literature, contemporary Quebec theatre, Greek and Roman history, modern medicine (a postgraduate series for doctors), Canadian history, audio-visual techniques and human geography. The CBC FM network broadcast a 10-week course of five lessons a week in conversational French, with printed lesson guides available to listeners for a small charge.

The CBC Northern Service introduced a special series of programs to teach Northern Canada listeners useful Eskimo words and phrases. The weekly program presents "Eskimo for Beginners" in conversational style, together with various examples of Eskimo cultural expression through music, song and story.

Youth Programming.—In addition to school broadcasts, CBC radio and television produce a variety of general entertainment and information programming for children and young people. In the French and English services there are programs of stories, songs, puppets and other learning and play activities for pre-schoolers, plus a variety of material for older children including music, comedy, student quiz programs, adventure series, magazine and interview shows, cartoons and documentary films. Programs for teenagers often involve young people themselves in planning and production, and reflect their own interests and attitudes.

Information Programming.—Much of the CBC's programming is educational in a broad, informal sense—Canadian and international news coverage, live broadcasts of special events and public occasions, and programs of comment, interview, discussion and documentary on current affairs. Some such programs involve the public directly in discussion, through "teach-in" or "town meeting" formats, or the popular "phone-in" and "phone-out" techniques of program participation. CBC radio and television also offer regular series of special-interest programs in areas such as science, literature, art, music, film, language, agriculture and resources, consumer affairs, home and family interests, the social sciences, business and labour, Indian affairs, and religion and philosophy.

Educational Resource Material.—Both the French and English services of the CBC publish and sell selected program texts in book form. The English-language publications are mainly from lecture and discussion series broadcast on CBC radio and are widely used in schools and universities. Some spoken-word recordings are also published, such as readings by Canadian poets. The French-language material available for sale includes the texts of certain interviews and talks, and also records, books, games and toys derived from popular children's programs.

Le comité de linguistique of the CBC's French services, whose members are CBC staff with special qualifications in language, is concerned with maintaining a high standard of

French in CBC programs and in the Corporation's general activities and operations. One of the committee's current projects is the compilation of a glossary of French terms used in radio and television.

CBC Learning Systems, a section of the English-language publications branch, has an increasing library of sound tapes from selected radio talks and documentary series. Tapes are made available to educational institutions, at a nominal charge.

The availability of CBC educational films for non-broadcast use has been limited by contractual and other considerations, although possibilities for wider use have been under study. In March 1970, the CBC announced the signing of an agreement for the distribution of selected English-language television programs throughout North America. Under the terms of the agreement, CBC programs for educational and non-theatrical use in Canada will be made available for sale through the Visual Education Centre in Toronto and, for markets in the United States, Puerto Rico and Mexico, through Public Media Inc., of Wilmette, Illinois.

Various CBC recordings of serious and popular music have been made available for public sale by arrangement with commercial recording companies. They are distributed through record stores and the usual retail outlets. In 1970 in a similar co-operative venture, commercial recordings were issued based on the CBC's popular pre-school television series "Friendly Giant" and "Mr. Dress-Up".

Section 3.—The Canada Council

The Canada Council was created in 1957 by an Act of Parliament, to "foster and promote the study and enjoyment of, and the production of works in the arts, humanities and social sciences". It carries out its task mainly through a broad program of fellowships and grants of various types. It also shares responsibility for Canada's cultural relations with other countries in co-operation with the Department of External Affairs.

The Council is made up of a chairman, a vice-chairman and 19 members, all appointed by the Governor in Council. It meets at least five times a year. Its administration is headed by a director and an associate director, also appointed by the Governor in Council. Within the limits of the Canada Council Act, the Council enjoys a large measure of autonomy, setting its own policies and developing and carrying out its own programs in consultation with the community of artists and scholars. The Council reports to Parliament through the Secretary of State and also appears before such parliamentary committees as the Public Accounts Committee and the Standing Committee on Broadcasting, Film and Assistance to the Arts.

Income.—The Council's income is derived from three sources: an annual grant of the Canadian Government which amounts to \$24,200,000 for the year ended Mar. 31, 1971; the Endowment Fund established by Parliament when it created the Council, which is expected to yield \$4,900,000; and private funds willed or donated to the Council and used in accordance with the wishes of the donors.

Assistance to the Arts, Humanities and Social Sciences.—The Council's assistance to the arts amounted to \$9,714,000 in 1969-70, of which \$2,036,000 was used to finance some 900 bursaries and awards to individuals in the various art forms, and \$7,382,000 was applied to grants to organizations including \$2,007,000 for music, \$2,566,000 for theatre, \$1,504,000 for dance and opera, \$1,077,000 for the visual arts and \$162,000 for writing and publication.

Assistance to the humanities and social sciences accounted for \$17,757,000. In support of research training, the Council awarded 2,368 doctoral fellowships totalling \$10,786,000; for research work, 135 leave fellowships totalling \$1,018,000 and \$4,282,000

in research grants; for research communication, a total of \$796,000 in assistance to learned meetings, visiting professors, attendance of Canadian scholars at international conferences, and publication of learned journals and scholarly manuscripts.

Special Programs.—The Canada Council also administers, on behalf of the Canadian Government, part of a program of cultural exchanges with France, Belgium, Switzerland, the Federal Republic of Germany, Italy and the Netherlands. In 1969-70, it awarded fellowships and grants totalling \$832,000 to citizens of these countries. The Council also administers the funds of the Canadian Cultural Institute in Rome, created in 1967 by an agreement between Canada and Italy. The Institute's annual income of some \$25,000 is used to provide fellowships for Canadian artists and scholars wishing to work or study in Italy. The Izaak Walton Killam Memorial Awards of the Canada Council, another of its special programs, were inaugurated in 1967 with funds from the Killam estate. These awards go to support a few scholars of exceptional ability engaged in research projects of far-reaching significance. In 1969-70, there were 24 awards made under this program, totalling \$525,000.

Prizes and Special Awards.—Under its power to "make awards to persons in Canada for outstanding accomplishments in the arts, humanities or social sciences", the Council annually awards the \$15,000 prizes financed by a fund provided by the Molson Foundation. The amount of the fund was raised from \$600,000 to \$800,000 during 1969-70, thus enabling the Council to raise the number of annual awards from two to three. The Canada Council Medal, which served more or less the same purpose as the Molson Prizes, was abolished. Again in that year, the Governor General's Literary Awards, financed by the Council, were awarded to six Canadian writers.

UNESCO.—The Canada Council Act provides for certain functions in relation to the United Nations Educational, Scientific and Cultural Organization. It has accordingly established a National Commission for UNESCO and provides its secretariat and budget. As an agent of the Council, the Canadian Commission for UNESCO co-ordinates UNESCO program activities abroad and administers a modest program in furtherance of UNESCO objectives. In 1969-70, the Council spent approximately \$200,000 through the National Commission for these purposes.

Section 4.—Provincial Assistance to Artists and Cultural Organizations

Provincial governments, as well as other levels of government and industry, have during the past few years become more and more aware of the significance of the arts in the life of the community. All provinces except Newfoundland, Prince Edward Island and Manitoba now give some form of financial assistance to artists (writers, poets, painters and sculptors), cultural organizations or community councils. The assistance provided by each province is described in the following paragraphs.

Nova Scotia.—This province has no specific legislation authorizing financial assistance for cultural advancement but the Department of Education and the Department of Finance and Economics give grants to a number of organizations and payments are made under the Provincial Finance Act from the departmental appropriations. In 1969, the largest grants given by the Department of Education went to the Halifax Symphony Orchestra, \$33,150; the Army Museum, \$7,000; the Glace Bay Miners' Museum, \$7,000; the Nova Scotia College of Art, \$6,500; the Neptune Theatre Foundation, \$2,500; and the Canadian Opera Company, \$2,000. Fifteen grants of from \$300 to \$800 each were given to other organizations interested in the preservation of historical artifacts, in folk arts and in music or drama. Department of Finance and Economics grants were given to the Neptune Theatre Foundation, \$10,000; the Antigonish Highland Society, \$20,000; the

Gaelic College of Celtic Folk Arts and Highland Home Crafts, \$20,000; the Maritime Conservatory of Music, \$7,500; the Nova Scotia Festival of the Arts, \$4,000; the Nova Scotia Talent Trust, \$2,000; the Annapolis Valley Apple Blossom Festival and the Cape Breton Youth Orchestra, \$1,000 each; and the Acadian Festival Committee and the Halifax Music Festival, \$300 each.

New Brunswick.—In March 1968, the Government of New Brunswick established an Office of Cultural Affairs, the function of which is to promote the study, enjoyment and production of the performing and visual arts, the literary arts and crafts; to assist, co-operate with and enlist the aid of organizations with similar objectives; and to provide grants, scholarships and bursaries for the study, research or development of the arts in the province. The Handicrafts Branch, which had been in operation since 1946 as part of the Department of Industry and Reconstruction, was incorporated into the new Office of Cultural Affairs. This Branch had been successful in stabilizing and developing several well-known cottage craft industries in New Brunswick and was involved in teaching crafts as a recreational activity. Under its present administration it hopes to promote more broadly the cultural aspect of the crafts by co-operating with other provincial craft organizations and the New Brunswick Craftsmen's Council in sponsoring craft exhibitions, seminars, workshops and classes on a regional basis.

In 1968-69, the province made direct grants totalling \$37,350 to: the Atlantic Symphony, \$10,000; the Sunbury Shores Arts and Nature Centre and the Fredericton Playhouse, \$5,000 each; the Beauséjour Choir and the University of Moncton Choir, \$3,000 each; the Academy of Ballet of New Brunswick, \$1,000; and other music festivals or drama organizations, \$200 to \$750 each. Office of Cultural Affairs grants totalled \$10,750, to: the University of Moncton Theatre, \$2,000; the Sunbury Shores Arts and Nature Centre, \$1,500; the Saint John Arts Council, the University of New Brunswick Creative Arts Centre, and the *Fiddlehead*, \$1,000 each; and 11 other art, handicraft, ballet and historical organizations, \$100 to \$700 each. In each of the years 1968-69 and 1969-70, \$5,000 was spent on paintings for the provincial collection.

In 1969, a conference was held on the state of the arts in New Brunswick, attended by 100 delegates. The 20 resolutions tabled, recommending steps that might be taken to advance interest in the arts, are under review by the Office of Cultural Affairs.

Quebec.—The Province of Quebec, through its Department of Cultural Affairs established in 1961, provides assistance to the arts in the form of awards, scholarships or grants to individuals and organizations. In the year ended Mar. 31, 1968, the amount expended for this purpose was \$4,638,500, of which \$427,500 was granted to individuals. There were 78 grants valued at a total of \$210,000 given to individuals for creative projects; \$90,000 was used to pay travelling and living expenses of individuals for study outside of Quebec or participation in international competitions, most of them working under the France-Quebec cultural agreement; \$70,000 was given to assist authors with the publishing of research works and to purchase books directly from the author at full price; awards for literary excellence amounted to \$22,500, including the \$5,000 David Award which is Quebec's highest literary award, and seven \$2,500 awards for works published during the preceding year; a \$5,000 scientific award is made each year for a collection of research works or an exceptional accomplishment in the field of pure or applied science; and \$30,000 was used to purchase 30 works of art from those displayed in competitions (430 in 1967-68) to form part of the annual Artistic Competitions Exhibition or to be acquired by the Quebec Museum and the Contemporary Art Museum. Grants to organizations included: an amount of \$25,000 to editors to assist them with their publications; \$50,000 for the purchase of volumes for libraries or to be given as awards to students; \$46,000 to associations of editors, librarians, writers, etc.; \$75,000 to five plastic arts organizations; \$725,000 to 45 symphonic orchestras, choirs, bands and other musical organizations; \$1,000,000 to 29 theatrical troupes and companies; \$200,000 to 20 art and cultural centres; \$1,500,000 to 114 public libraries; \$145,000 to French-speaking organizations

located outside Quebec in Canada and in the United States; \$100,000 to seven French-language organizations working toward the improvement and extension of the French language; and \$345,000 to 71 other cultural organizations.

Ontario.—The Ontario Government passed legislation in 1962 (SO 1962-63, c. 6) establishing the Province of Ontario Council for the Arts, which consists of a chairman, a vice-chairman and ten other members, all appointed by the Lieutenant-Governor in Council. It is the function of the Council to promote the study and enjoyment of and the production of works in the arts and to such end may (1) assist, co-operate with and enlist the aid of organizations whose objects are similar to the objects of the Council; (2) provide through appropriate organizations or otherwise for grants, scholarships or loans to persons in Ontario for study or research in the arts in Ontario or elsewhere or to persons in other provinces or territories of Canada or any other countries for study or research in the arts in Ontario; and (3) make awards to persons in Ontario for outstanding accomplishments in the arts.

In the year ended Mar. 31, 1970, a total of \$1,542,411 was dispensed by the Council in the form of grants or project assistance. Of that amount, \$1,333,976 was given in grants to 89 organizations, the largest of them to the National Ballet Guild of Canada, \$311,780; the Toronto Symphony Orchestra Association, \$237,780; the Canadian Opera Company, \$146,440; the Stratford Shakespearean Festival, \$85,000; and the Toronto Arts Foundation, \$51,000. Twenty-five projects were assisted, the largest amounts going to the Co-ordinated Arts Services, \$50,000; the Dominion Drama Festival, \$29,859; the Ontario Federation of Symphony Orchestras, \$27,019; Neighbourhood Programs, \$18,261; and the Arts Activity Centre, \$11,967.

In addition, the Ontario Department of Energy and Resources contributed \$89,400 toward the McMichael Conservation Collection of Art at Kleinburg; the Department of Public Works purchased 29 works of art from Canadian painters, designers and sculptors at a cost of \$330,000 for the Queen's Park office extension program; and the Department of University Affairs contributed \$3,595,000 to the Royal Ontario Museum, \$700,000 to the Art Gallery of Ontario and \$800,000 to the Ontario College of Art.

Saskatchewan.—In 1949, the Saskatchewan Arts Board was established by Act of the legislature, its stated aim being "to provide opportunity for the people of that province to participate in visual art, music, drama, literature, handicrafts and other cultural pursuits; to stimulate and encourage this participation and appreciation". The means of achieving these aims were left to the judgment of the Board. Over the years, handicraft and visual art programs have been expanded to the point where in some areas they have reached the professional level. Workshops, lectures and seminars have been sponsored. A highly successful Saskatchewan Summer School of the Arts offers courses, varying in length from one to three weeks, in band, orchestra, choral singing, piping and drumming, highland dancing, painting, pottery, acting, writing and weaving, under instruction by highly qualified teachers. The annual Saskatchewan Festival of the Arts focuses attention on the arts by presenting top-calibre artistic performances and exhibitions.

In 1968, the Board granted financial assistance to students of the arts, enabling them to continue their studies at higher levels: amounts of from \$400 to \$1,500 each to 11 students in music; five grants of \$1,200 each for study in drama; \$302 to \$1,500 to six students in visual art; and \$180 to \$225 to each of three students of ballet. Grants of from \$300 to \$15,500 were given to six music societies or groups; \$1,000 to \$10,000 to six theatrical groups; \$19,000 in subsidies to community arts performances and exhibitions; \$600 to \$1,400 to nine arts councils; \$900 to the Weyburn resident artist; and \$1,500 to the Norman MacKenzie Art Gallery.

Alberta.—The Cultural Development Branch of the Department of the Provincial Secretary of Alberta was begun after an Act of the legislature was passed in 1946 providing for "encouragement of the cultural development of the people of this Province". The

Act has since been amended several times to give it greater flexibility. The Branch is interested in the promotion of all forms of art. Its program is intended (1) to give opportunity to the public to witness the best in performing arts tours, exhibitions, etc., in order to gain their initial excitement and interest in the various modes and expressions in the arts; (2) to train community and other teachers so that that excitement and interest may be retained and fostered, with emphasis on in-service training for teachers in the public school system to be conducted at regular intervals and on special training for instructors at institutions, such as those for the mentally or physically handicapped or for older persons, which have programs that develop arts according to the needs of the individual; (3) to provide consultative services for cultural organizations throughout the province; and (4) to give financial assistance to individuals, local amateur and professional institutions and provincial government organizations whose aims are the development of the arts. Awards to individuals wishing to further their training in some form of the arts amount to \$50,000 annually. The budget of the Branch for the year ended Mar. 31, 1969 was over \$1,000,000.

British Columbia.—The British Columbia Cultural Fund was set up by statute in 1967. That Act set aside \$5,000,000 in an endowment-type fund, the interest from which was to be spent "for the stimulation of the cultural development of the people of the Province". In September of that year, an Advisory Committee was established to receive applications for cultural grants and to report their recommendations to the Department of Finance for the issuance of the necessary funds. In 1969, the amount of the endowment was raised to \$10,000,000.

The Advisory Committee has encouraged the formation of community arts councils throughout the province which are representative of local and rural areas; 50 such councils have been formed with the result that local music organizations as well as other groups associated with visual and performing arts and crafts have received per capita assistance from the Fund; \$42,500 was distributed for that purpose in 1967, \$99,300 in 1968 and about \$150,000 in 1969. Additional assistance is provided for major organizations, which received a total of \$43,000 in 1967, \$255,000 in 1968 and some \$325,000 in 1969. For example, in 1967 and 1968 the Vancouver International Festival received \$65,000; in the three years 1967-69, the Vancouver Symphony Orchestra received \$127,500, the Vancouver Opera Association \$80,000, the Victoria Symphony Orchestra \$47,000, Jeunesse Musicale \$32,500, the B.C. Music Festival Association \$25,000, the Victoria Conservatory of Music \$20,500, the Junior Symphony of Vancouver \$6,000, the Okanagan Symphony Orchestra \$3,100, and the Vancouver Bach Choir \$2,500; in 1968, the Nanaimo Symphony Orchestra received \$1,600 and the Royal College of Organists \$1,000.

Similar support is given in the field of drama and the performing arts. The major theatre organizations receiving grants in 1969 were: the Playhouse Centre of British Columbia, \$40,000; the Metro Theatre of Vancouver, \$25,000; the Bastion Theatre of Victoria, \$20,000; the B.C. Drama Association, \$5,000; the National Theatre School, \$2,500; and the Canadian Theatre Centre, \$1,000. The Vancouver Art Gallery received \$25,800 and the Art Gallery of Greater Victoria, \$7,500.

Assistance is given to individuals applying for scholarships who have reached a level of ability entitling them to enrol in nationally or internationally accepted schools of dance, theatre or music. Assistance is also provided for British Columbia's native Indian population to enable them to undertake projects that would revive their historic culture in the areas of crafts, dance, music and language. A First Citizen's Perpetual Fund of \$25,000,000 was established in 1969 which will permit greater emphasis to be placed on this program.

In addition, the Cultural Fund underwrites the costs of seminars for such organizations as the British Columbia Museums Association, the Canadian Federation of Music Teachers, the British Columbia Potters Guild and the Community Arts Council.

Section 5.—Library and Archive Services

Library Services

The National Library.—The National Library of Canada came into existence formally on Jan. 1, 1953 by the proclamation of the National Library Act (RSC 1952, c. 330). On the same date it absorbed the Canadian Bibliographic Centre, which had been engaged in preliminary work and planning since 1950. The Library is now governed by the National Library Act, 1969, which broadened the powers of the National Librarian to whom is assigned the responsibility of co-ordinating government library services. The Act established a National Library Advisory Board consisting of 15 members.

The Library was housed for a long period in inadequate temporary quarters that limited its collections and activities. Construction of a permanent building, designed to accommodate both the National Library and the Public Archives, began in 1963 and was completed in the spring of 1967. The new structure, which has a floor area of 13 acres and was equipped initially with 81 miles of steel shelving, was opened formally by the Prime Minister on June 20, 1967. The book collection now consists of more than 400,000 volumes, supplemented by microcopies of more than 100,000 additional titles. Newspaper files formerly in several locations have been brought together and now form the largest collection of Canadian newspapers in Canada.

The Library compiles and publishes *Canadiana*, a monthly catalogue of new books and pamphlets relating to Canada; 12,000 to 13,000 titles are listed each year.* *Canadiana* includes details of trade publications, official publications of the Government of Canada and the ten provinces, films, filmstrips and phonograph records produced in Canada.

The *National Union Catalogue* lists over 10,000,000 volumes in about 300 government, university, public and special libraries in all provinces. New accessions (which numbered over 1,200,000 in 1969-70) are reported regularly, and the Union Catalogue thus forms a continuously up-to-date key to the main book resources of the country. During the year ended Mar. 31, 1970, the Reference Division was asked to locate more than 87,000 titles, and it is noteworthy that copies of 75 p.c. of them were found in Canadian libraries.

The Library has published a union list of serials in the fields of the humanities and social sciences currently received by Canadian libraries. This list is a first step toward a complete union list of such serials in the humanities and social sciences that will complement the *Union List of Scientific Serials in Canadian Libraries* published by the National Science Library. The Library is also preparing for early publication a retrospective *Bibliography of Canadiana, 1867-1900*, which will list more than 25,000 titles.

The National Science Library.—The functions and services of the National Science Library, which is administered by the National Research Council Library, are described in Chapter VIII on Scientific and Industrial Research.

Public Libraries.—Public libraries in Canada are organized under provincial legislation which specifies the method of establishment, the services to be provided and the means of support. Municipalities may organize and maintain public libraries or join together to form regional libraries according to provincial legislation. Provincial public library agencies advise local and regional libraries and distribute grants as provided.

Some recent developments in the advancement of library service may be of interest. The establishment of regional libraries continues throughout the country. In Ontario, 14 regional library systems cover the province; the four systems serving the northern part of the province have extended bookmobile service to a number of isolated communities. In Nova Scotia, eight regional libraries now serve 75 p.c. of the population of the province through 38 branch libraries in cities and towns and 11 bookmobiles which visit about 800

* A list of 400 selected titles of "Books About Canada", prepared by the National Library, appears in Chapter XXVII of this volume.

schools and communities. In Saskatchewan, the North Central Regional Library has been joined recently by three Indian reserves, and Manitoba regional libraries have begun to lend reading materials to persons in senior citizens' homes as an added community service. The Yukon Regional Library serves a population of 15,000, providing books to all school libraries except those in Whitehorse and Dawson. The Northwest Territories Public Library Services, with headquarters in Hay River, serves a widely scattered population of 31,000. Public library services in Newfoundland began to expand in 1968 as a result of a substantial increase in provincial grants which enlarged the book budget by an amount almost as large as the entire library grant for the preceding year. British Columbia takes justifiable pride in the fact that the scientific and technical collection in its Vancouver public library has been rated by the National Research Council as one of the best in Canada. The Prince Edward Island Department of Education, in an effort to attract professional librarians to the province, offered a bursary of \$1,000 to students in library science who were willing to guarantee their services for a two-year period.

Bilingualism is assuming increasing importance in public libraries. Many libraries in English-speaking communities are increasing their holdings of French books and materials. Quebec libraries, in common with those in the other provinces, report a lively interest in weekly film and music presentations, art exhibits and library-sponsored tours.

Table 1 gives summary results of the annual public library survey for 1968, with comparable totals for 1966 and 1967. Book circulation was 88,586,493, or 5.7 per person served. The current operating payments of all public libraries amounted to \$46,844,260, or \$2.99 per person served compared with \$2.56 in the previous year. The full-time staff numbered 4,348 in 1968, of whom 970 or 22.3 p.c. were professional librarians.

University and College Libraries.—Libraries in 79 universities and colleges having enrolments of 100 or more students reported, in 1968-69, a total of 25,999,563 volumes or 82.6 per student compared with 80.7 per student in 1967-68. Expenditures amounted to \$184.63 per student, an increase of \$4.24 over the previous year. The total full-time staff of the libraries was 4,401, of whom 1,303 or 29.6 p.c. were professional librarians. University and college libraries also reported increased stocks of films, film equipment,

microtext, recordings, projectors, maps, tapes and other forms of audio-visual materials as part of the resources of their research centres.

¹Full-time and equivalent.

School Libraries.—In 1968-69, 6,451 elementary and secondary schools with centralized libraries reported to the survey. Their total book stock was 23,988,913, or 7.9 books per pupil served. Payments for books and other library materials ranged from \$1.00 per pupil served in New Brunswick to \$7.57 in Ontario. The average for Canada was \$5.97.

3.—Centralized School Libraries, by Province, School Year 1968-69, with Totals for 1966-67 and 1967-68

Librarian Education and Remuneration.—The seven library schools operating in Canada in 1969 awarded 484 Bachelor of Library Science and 106 Master of Library Science degrees. McGill University and the University of Western Ontario offer only the two-year course leading to a Master's degree; the University of Ottawa and the University of Toronto also offer the course leading to a Master's degree as well as the one-year program for the Bachelor's degree. Table 5 gives some pertinent information regarding the graduates who reported. Table 6 shows the median salaries of librarians in professional positions in 1968.

The Public Archives

Provision for the creation of the Public Archives was first made by an Order in Council of June 20, 1872, which appointed an officer of the Department of Agriculture to take charge of historical archives. In 1903, the responsibility for old government records was transferred from the Secretary of State to the Department of Agriculture, and the head of the Archives was given the title of Dominion Archivist and Keeper of the Records. In 1912, the Archives became a separate department and was named Public Archives (SC 1911-12, c. 4, now RSC 1952, c. 222). The Public Archives has a dual role. As a research institution, it is responsible for acquiring from any source all significant documents relating to the development of the country and of value to Canada, and for providing suitable research services and facilities to make this material available to the public. As an essential part of the government administration, it has broad responsibilities in regard to the promotion of efficiency and economy in the management of its records.

The Historical Branch is comprised of four Divisions. The Manuscript Division contains manuscript collections and public records. The manuscript collections include private papers of statesmen and other distinguished citizens, records of cultural and commercial societies, and copies of records in France, England and other countries relating to Canada. The public records consist of selected records of all departments and agencies of the Government of Canada. The Picture Division has charge of documentary paintings, water colours, engravings and photographs relating to people, historical events, places and objects. It also has an extensive collection of films and sound recordings. The Map Division has custody of thousands of maps and plans pertaining to the discovery, exploration and settlement of this country and its topography, as well as a large collection of current topographical maps of foreign countries. The Library contains more than 80,000 volumes on Canadian history, including numerous pamphlets, periodicals and government publications.

Although documents in the Archives may not be taken out on loan, they may be consulted in the building, and a 24-hour-a-day service is provided for accredited research workers. Reproductions of available material may be obtained for a nominal fee on request and many of the documents in the Manuscript Division are on microfilm which may be obtained on inter-library loan.

The Records Management Branch assists departments and agencies in the setting up and operation of their records management programs. Its service also includes recommendations and advice on scheduling and disposal of records. At the Ottawa, Toronto and Montreal Records Centres it provides storage, reference service and planned disposal of dormant records on an economical basis. Other regional centres are being established in major cities across Canada.

The Administration and Technical Services Branch, in addition to an extensive conservation and restoration program, provides a technical and advisory service on micro-filming to government departments and agencies. Microfilm work is done for departments at cost. It also provides a full range of services to the National Library.

Branch offices of the Public Archives are located in London, England, and Paris, France. The Archives also administers Laurier House as a historical museum.

Section 1.—Organization of and Expenditures on Scientific and Industrial Research in Canada

The organization and distribution of the research and development effort in Canada are partially the result of certain characteristic problems of this country, especially its large area, its relatively small population and peculiar population distribution, and its unusual industrial structure. However, there are indications that certain major shifts in the previous pattern of effort may be close at hand, caused by the emergence of organizations concerned with science policy questions and the recent general recognition of the growing importance of science and technology to modern society.

Early research in Canada was related mainly to the primary industries. Geological mapping and agricultural research were almost the only areas of scientific activity until the beginning of the present century. In 1898, research and development in the field of fisheries was assigned to an independent honorary board (the Biological Board) which has continued to the present as the Fisheries Research Board. In 1916, the Federal Government set up the National Research Council, the early duties of which were to encourage and stimulate research in the universities and industry. It later undertook research activities with the establishment of its own laboratory system in the late 1920s and early

* The introductory material appearing in the various Sections of this Chapter as well as Section 6 were prepared or revised by Dr. R. D. Voyer of the Science Council of Canada, and the statistical data were supplied by the Science Statistics Section, Business Finance Division, DBS. Departmental and agency information was prepared as indicated.

1930s. A great expansion in scientific research and development took place during the Second World War. The National Research Council assumed responsibility for research and development activity for the three Armed Services and for the development of atomic energy. After the War, in 1947, the Defence Research Board was set up in the Department of National Defence to take over the responsibility for military research and development (see Chapter XXVI) and, in 1952, the Crown corporation Atomic Energy of Canada Limited was established to proceed with the development of atomic energy in Canada, and the National Research Council returned to its previous activities. Also, certain other Crown corporations, such as Eldorado Mining and Refining Limited (now Eldorado Nuclear Limited), Polymer Corporation Limited, and Canada's largest national utility, the Canadian National Railways, developed important research programs. In 1960 the Medical Research Council was established in association with the National Research Council.

Until the 1950s, industrial research was slow to develop in Canada, although certain large industries, particularly the chemical industry and the pulp and paper industry, had long histories of successful research and development effort. Through the efforts of the industrial companies themselves and by means of various government-sponsored incentive programs, the industrial research and development effort in Canada has since grown and diversified considerably. In addition, provincial research councils were set up both before and after the War in several provinces, usually for the general purpose of improving the provinces' utilization of their resources and the production efficiency of their industries. Of these, the Ontario Research Foundation and B. C. Research (of the British Columbia Research Council), although established under provincial legislation, are self-governing institutions engaged in research and development on contract for manufacturers, departments of government and on their own account, and derive their current revenue mainly from sponsored research. Furthermore, the Pulp and Paper Research Institute of Canada (see Chapter XII, Section 3) is the one major research association that operates on a co-operative basis; its operating funds are provided by industry and its facilities by the Federal Government and McGill University, all three vitally interested in ensuring that this industry maintains its competitive position in world markets. Previously, the primary resource base of industry generally was not conducive to the establishment of industrial research laboratories. As well, the degree of foreign ownership of manufacturing companies in Canada undoubtedly had some influence on the development of industrial research, since Canadian subsidiaries of foreign companies had ready access to the research and development results of their parent companies. As a result of the consequent lack of incentives, all but a few of these subsidiaries refrained from establishing their own laboratories and from developing products specifically for the Canadian market. However, to meet the challenge of competition from other countries in the production of sophisticated modern items of manufacture, Canadian industry has increased its own scientific and technical investigations. The Sheridan Park Research Community, just outside Metropolitan Toronto, is an example of a recent concept for improving the efficiency of and expanding industrial research in Canada. A somewhat similar but more diffuse development took place earlier at Pointe Claire, near Metropolitan Montreal. Industrial research centres of this type facilitate applied research and development activities for the scientists and engineers involved by permitting ready interchange of non-proprietary scientific and technical information and access to a wide variety of instrumentation, equipment and skills. They also provide an attractive environment for skilled personnel, and thus increase Canada's potential for keeping its trained scientists and engineers. At Sheridan Park the research laboratories of nine individual companies are in full operation and there is room for further corporate participants. A Conference Centre has been built and the community members have formed an association to promote and expedite many other mutually desirable arrangements.

A significant element in the training of scientists and engineers beyond the undergraduate level involves the research and development activities undertaken in the universities as part of their program of graduate studies. These research and development

activities are related directly to the educational process and are of great importance in the training of the skilled personnel needed for the development of Canada's economy; they have a further importance in that they create centres of basic research in Canada and therefore act as listening posts tuned to the progress of science and technology in other parts of the world.

Thus, there are three main sectors of research and development in Canada—research and development in government, in industry and in the universities. These three elements are covered in some detail in the remainder of this Chapter.

Mechanism for the Federal Science Policy.—In the federal sphere, the ultimate authority for policy on science resides in the Cabinet. To exercise this authority there was established by the Research Council Act (RSC 1952, c. 239, as amended) a Cabinet committee known as the Committee of the Privy Council on Scientific and Industrial Research. This Committee comprises those Cabinet Ministers having departments with major scientific responsibilities and certain other Ministers who have an indirect concern with scientific affairs. These federal departments and agencies advise the Privy Council Committee on the scientific aspects of their own departmental responsibilities and on the organization and support of research required for their own purposes. For many years, the National Research Council, on the other hand, advised the Committee on general science policy, particularly on research in the universities, in industry and in fields not specifically the responsibility of departments or agencies. Then, in 1949, the Privy Council Committee broadened the structure of its advisory mechanism by the addition of an Advisory Panel for Scientific Policy to which the Privy Council Committee could turn for joint advice on the formulation and conduct of government scientific policies. At the present time, the Advisory Panel consists of senior officials from the science-based departments and agencies, with the Clerk of the Privy Council as Chairman, and the Director of the Science Secretariat as Vice-Chairman.

In 1964, as a result of the recommendations of the Royal Commission on Government Organization, a Science Secretariat was created in the Privy Council Office with the task of assembling and analysing information on the Government's scientific and technological activities, as well as on those of industry, the universities and the provinces, particularly in relation to the activities and concerns of the Federal Government. The Director of the Science Secretariat, who is also chief science adviser to the Government, acts as secretary to the Committee of the Privy Council on Scientific and Industrial Research. The Science Secretariat has since also taken responsibility for advising the Department of External Affairs on the selection of Counsellors (Scientific) for placement in certain Canadian embassies abroad, and on the distribution of reports received from these Counsellors.

In 1966, the Federal Government established the Science Council of Canada, a Crown corporation with the duty of independently assessing Canada's scientific and technological resources, requirements and potentialities and making recommendations thereon by the publication of reports. The Science Council is concerned both with research and development and with the use of science and technology in the solution of Canada's social and economic problems. It reports to the Prime Minister and draws its membership from industry, the universities and government. The Science Council has had, since 1968, its own executive arm. For the first two years of its existence, it received professional and administrative support from the Science Secretariat.

Since its formation, the Science Council has initiated intensive studies of science and technology in Canada in order to provide a basis for advice on the formulation of policies and plans for the future. It has published several reports based on background studies in several areas (e.g., the upper atmosphere and space, physics research, chemistry and chemical engineering, psychology, the proposal for an intensive neutron generator, Federal

Government support of research in Canadian universities, and water resources research in Canada). In addition, the Council has published its first science policy report in which it recommends that Canada focus its scientific and technological effort through the creation of Major Programs designed to help solve some of the country's social and economic problems. These Programs include, among others, a space program for Canada, water resources management and development, transportation, urban development, computer applications and scientific and technological aid to developing areas of the world. The Science Council is continuing its study of these and various other possible Major Programs from the viewpoints of cost-benefit, organization, direction and funding.

In 1967, a Senate Committee on Science Policy was formed to consider and report on the scientific policy of the Federal Government with the object of appraising its priorities, its organization, its budget and its efficiency. Several hearings have been held and the Committee intends to issue a report containing its findings in the near future.

In addition, as part of its studies of the national science policies of the individual member countries, the Organization for Economic Co-operation and Development (OECD) has issued a comprehensive review of Canadian Science Policy which will be of help to those designing Canada's future science policy. This document is an extremely useful supplement to the present Chapter.

Research and Development Expenditures in Canada.—In the past decade, Canada's gross expenditures on research and development (GERD) have more than doubled (Chart II) and government has remained the major source of research and development funds. In 1967, Canada's current expenditures on research and development amounted to about \$690,000,000, divided as shown in Table 1.

Totals.....	23	38	39	100

¹ Includes a small amount of private non-profit research.

Section 2.—Scientific Research Expenditures by and Activities in Federal Government Organizations

Research activities in the various Federal Government departments and agencies have expanded rapidly, at first because of the need for speeding up the production of raw materials, which were long the basis of Canada's export trade, and later because of increasing interest in the processing of raw materials, the necessity of meeting the needs of national defence and the developing consideration for many human and resource requirements.

In Subsection 1 of this Section, which gives statistics of all Federal Government expenditures on scientific research, the departments and agencies conducting such research are listed in Table 3, p. 468. Subsections 2 to 6 review the research activities of the National Research Council, Atomic Energy of Canada Limited, certain research groups of the Department of Energy, Mines and Resources, the Department of Indian Affairs and Northern Development (except those of the Canadian Wildlife Service), and the Canadian Meteorological Service. The research activities of other federal organizations are included along with related data in the subject chapters, as follows: the scientific work of the Canadian Wildlife Service in Chapter I; of the Department of National Health and Welfare and the Medical Research Council in Chapter VI; of the Canada Department of Agriculture in Chapter XI; of the Canadian Forestry Service, Department of Fisheries and Forestry, in Chapter XII; of the Fisheries Research Board, Department of Fisheries and Forestry, in Chapter XIII; of the Mines Branch of the Department of Energy, Mines and Resources in Chapter XIV; of the Board of Grain Commissioners in Chapter XXI; and of the Defence Research Board in Chapter XXVI.

Subsection 1.—Expenditures by the Federal Government on Science

Information on the expenditures of the Federal Government for science is provided by annual surveys carried out by the DBS. Each survey covers the actual costs of the preceding fiscal year and the estimated expenditures of the next two years on the scientific programs of the reporting departments and agencies. At present, only activities in engineering and technology and in the physical and life sciences are included, although eventually the surveys will be expanded to include the social sciences. For survey purposes, "scientific activities" consist of research and development, scientific data collection, scientific information, testing and standardization, feasibility studies, and scientific scholarship programs. Data are also collected on capital expenditures on plant for scientific activities and on personnel employed in science.

Although the Government's expenditures on science have increased 30 p.c. during the period shown in Table 2, the annual rate of increase has fallen. For the three latest years the annual increases were 1.4 p.c., 8 p.c. and 6 p.c., respectively; the average annual growth from 1963-64 was 16 p.c. Research and development continues to be the leading scientific activity, accounting for slightly over three quarters of all current expenditures on science.

Besides the R and D carried out within its own establishments, the Federal Government also provides important financial support for R and D performed in industry and the universities.

2.—Summary Statistics of Federal Government Expenditures on Science, Years Ended Mar. 31, 1968-71

Activity and Department or Agency	1967-68	1968-69	1969-70 ^p	1970-71 ^p
	\$'000,000	\$'000,000	\$'000,000	\$'000,000
Scientific Activity—				
Research and development.....	390.9	449.8	496.0	542.7
Scientific data collection.....	61.6	62.8	78.1	81.3
Scientific information.....	21.8	26.2	30.3	33.6
Testing and standardization.....	23.8	26.4	28.3	25.1
Feasibility studies.....	—	5.2	5.2	5.2
Scholarship programs.....	8.9	9.5	10.0	10.2
Capital expenditures.....	68.0	73.4	59.2	51.6
Totals, Scientific Activities.....	575.0	653.4	707.0	749.7
Department or Agency—				
Agriculture.....	52.9	61.7	63.4	61.7
Atomic Energy of Canada Limited.....	70.3	70.9	71.1	71.3
Energy, Mines and Resources.....	75.1	83.2	100.5	111.9
Fisheries and Forestry.....	48.7	57.8	62.1	60.6
Industry, Trade and Commerce.....	32.6	47.0	54.0	74.5
National Defence.....	86.3	85.5	81.3	79.6
National Research Council.....	111.1	126.1	134.0	135.6
Other departments and agencies.....	97.9	121.1	140.5	154.6

Table 3 shows the scientific expenditures of the major Federal Government departments and agencies. The National Research Council alone accounts for almost one fifth of the total expenditures; it provides more than half of the Government's direct support of science in the universities. The Department of Energy, Mines and Resources is the second largest spender on science. This Department and the other two major natural resource departments—Agriculture and Fisheries and Forestry—together represent almost one third of total expenditures. Expenditures on defence-oriented science have declined in the past few years to a little over one tenth of the total.

3.—Federal Government Expenditures on Science, by Department or Agency, Years Ended Mar. 31, 1969 and 1970

Department or Agency	1968-69				1969-70 ^p			
	Current Expenditures on Research and Development	Current Expenditures on other Scientific Activities	Capital Expenditures	Total Funds Applied	Current Expenditures on Research and Development	Current Expenditures on other Scientific Activities	Capital Expenditures	Total Funds Applied

The Federal Government is the sole source of funds considered here but it is not the sole performer. Although most of the Government-funded research and development continues to be performed within its own establishments, the Government's support of outside research has increased noticeably during the past few years. In 1963-64, about 72 p.c. of the current expenditures were for intramural R and D; in 1970-71, this proportion is expected to fall to about 56 p.c. The share of Canadian industry has fluctuated; on the average this sector receives about 18 p.c. of the total Government support of current R and D.

During the four years shown in Table 4, the Department of Industry, Trade and Commerce was the largest single source of support for industrial R and D. It now disburses about 65 p.c. of the total. The educational sector has received the greatest increase in Government support. Between 1963-64 and 1970-71 its share of total Government expenditures on R and D rose from 11 p.c. to 23 p.c.; for the past four years it has received more funds than the industrial sector. The National Research Council is the most important source of funds, contributing almost half of the total. Most of the other funds are for medical research from the Medical Research Council and the Department of National Health and Welfare.

4.—Federal Government Current Expenditures on Research and Development, Years Ended Mar. 31, 1968-71

Performing Organization	1967-68	1968-69	1969-70 ^p	1970-71 ^p

¹ Funds received may be used for the capital projects of the recipients.
and foreign recipients.

² Including provincial governments

It is estimated that a full-time equivalent of about 17,300 persons was engaged in Government intramural research and development in 1969-70. Of these, nearly 5,000 were scientists or engineers. At the same time, an equivalent of 6,200 persons was working in the related scientific activities (data collection, information, testing and standardization, feasibility studies, etc.) and, of these, only about 1,250 were scientists or engineers. Atomic Energy of Canada Limited, the National Research Council, and the Departments of Agriculture, Fisheries and Forestry and Energy, Mines and Resources employed about 80 p.c. of the scientists and engineers and nearly 85 p.c. of the supporting personnel engaged in research and development.

Subsection 2.—The National Research Council of Canada*

Organized research in Canada on a national basis dates from 1916 when the Federal Government established the National Research Council. Through the years, changes have taken place in organization and functions as the Council's activities have increased. Today, most of its 10 divisions are located on a 400-acre site just east of Ottawa on the Montreal Road. A Prairie Regional Laboratory is located on the campus of the University of Saskatchewan in Saskatoon and an Atlantic Regional Laboratory on the campus of Dalhousie University in Halifax. Of the Council's 1969-70 appropriation of \$133,000,000, about \$65,000,000 was used for scholarships and grants, \$47,000,000 for the operation of

* Prepared by Mrs. Joan Powers Rickerd, Information Services, National Research Council, Ottawa. The historical development of the Council is outlined in the 1969 Year Book, pp. 388-389.

the laboratories and \$6,200,000 for the Industrial Research Assistance Program (see p. 477). In 1970 it had a staff of some 3,400 of whom 500 held the doctorate degree, some 40 associate committees and, in the year ended Mar. 31, 1970, supported about 4,400 university scientists and awarded about 2,600 scholarships, bursaries and post-doctorate fellowships.

NRC Organization.—The National Research Council Act (RSC 1952, c. 239, as amended) assigns to the Council but does not limit it to the following functions: (1) utilization of Canada's natural resources; (2) utilization of technical methods and processes used in Canadian industry; (3) maintenance and improvement of the primary physical standards of measurement for Canada; (4) standardization of the quality of material used in public works and of scientific and technical apparatus used in Canadian industry and government; (5) the fostering and carrying out of scientific and industrial research through operation of research laboratories, financial assistance for research activities in Canadian universities, financial assistance and promotion of research in industry, and operation of the National Science Library and the Technical Information Services.

The Council consists of the President, the Vice-President (Administration), two Vice-Presidents (Scientific) and not more than 17 other members appointed by the Governor in Council. The Council is a body corporate and is required to meet at least three times a year. It is responsible to a designated Minister of the Crown, who is a member of the Committee of the Privy Council on Scientific and Industrial Research. Except for the four permanent officers, Council members are appointed for a term of three years and serve without salary. They are drawn from the senior staff of universities, industry and labour, in an attempt to achieve a broad base of advice, as to both scientific discipline and regional representation.

The President, who is the chief executive officer, is assisted by an Executive Assistant, and a Délégué Général. The Délégué Général, assisted by a small group of scientists, engineers and economists, is in charge of the formulation of long-range policies and plans, both for the research activities of NRC laboratories and for the support and encouragement of research in universities and in industry; for analyses of existing and alternative NRC projects and programs, taking into account both the scientific and economic aspects; and in general, facilitating the task of identifying NRC priorities in terms of national needs.

One Vice-President (Scientific) is responsible for industrial research assistance and promotion, and the other for the Council's awards program for support of university research. The Vice-President (Administration) is responsible for financial, personnel and administrative services as well as for the National Science Library, the Computation Centre and the Canadian Journals of Research.

The Laboratories of the Council, under the jurisdiction of the Executive Director (Laboratories), are organized into 10 divisions: the biochemistry laboratory, biology laboratory, physics, chemistry, building research, mechanical engineering, radio and electrical engineering, the National Aeronautical Establishment, the Atlantic Regional Laboratory and the Prairie Regional Laboratory.

On Apr. 1, 1970, the Government announced that federal research in astronomy would be consolidated under the National Research Council. The Council will be responsible for the operation of the Dominion Astrophysical Observatory, Victoria, B.C., and the Dominion Radio Astrophysical Observatory, Penticton, B.C. Also involved in the transfer are the Time Service of Canada, the solar and meteor programs of the Dominion Observatory in Ottawa, and the Meteorite Observation and Recovery Project which is a network of photographic stations with headquarters in Saskatoon, Sask.

NRC Research Activity.—The NRC laboratories carry out long-term, applied and specific project research work, largely industrially oriented although some programs are directed toward important national and regional problems and toward more basic and exploratory back-up research. Quite a number of research projects are carried out on behalf of other government departments and agencies and a considerable amount of staff time is given to consulting on technical problems. Additionally, some research projects

are undertaken to solve a particular problem, or because of their potential for basically new technology. When successful, the desired end result is the transfer of the new technology to productive channels in Canadian industry. New industries based on NRC-developed technology are beginning to be established, some located in large industrial centres and some in the Ottawa Hull metropolitan area where they can maintain close contact with NRC laboratories and take advantage of the new technology generated by the laboratories of the Defence Research Board and Atomic Energy of Canada Limited, and of the substantial research activities of several industrial firms in the area.

Research in the *Biology Laboratory* is focused in three main areas—food biology, environmental biology and radiation biology. In food biology, objectives are to study the economic production of cells or cell metabolites, and to determine the cause of loss in quality of meats, poultry and vegetables during freezing and storage. Environmental studies give close attention to the transfer of biocides through food chains, the subsequent danger to the biosphere, and the effects of exposure to cold, changes in light, diet, etc., on animals, particularly those exposed to biocides. Intensive study of radiation is important in a nuclear world, with emphasis particularly on finding therapeutic measures to prevent sickness or even death of irradiated animals. Physical and chemical changes in organic molecules by radiation of various kinds are being studied to learn more about their effects on living things and about the conversion of radiation energy into chemical energy by plants. The Biochemistry Laboratory studies biological systems at the molecular level but the Biology Laboratory is more concerned with whole organisms, cells, and their environments. Although these two programs differ in approach, the techniques used are similar, thus permitting the common use of major facilities.

The primary concern of the *Division of Building Research* is to provide a comprehensive research service for the construction industry of Canada so that its program covers various aspects of construction, building design, building materials and components, fire research, and studies in soil, snow and ice mechanics, and it serves as the technical research wing of the Central Mortgage and Housing Corporation. Regional stations are located at Halifax, N.S., Saskatoon, Sask., and Vancouver, B.C., an Information Office at Toronto and field stations at Thompson, Man., and Inuvik, N.W.T. Division projects are concerned with: the behaviour of cement, concrete, mortars, plasters, plastics and sealing and caulking compounds; atmospheric corrosion of metals and paint research; acoustics research; the performance of foundations, walls, windows and roofs; humidity in buildings; air-conditioning design; snow and wind loads on structures; the properties of various soil types including permafrost and muskeg; and the effects on buildings of ground vibrations caused by earthquakes. A fire research laboratory contains facilities for studying the initiation, development and extinguishment of building fires as well as for fire tests on materials and structures.

Much of the work concerns the performance of buildings and building materials in cold weather. Double-glazed windows and lightweight metal and glass curtain walls have been examined, improvement of winter building techniques has been studied, and the work of one section is devoted to problems of building in the Far North. Educational work is conducted to alert designers, manufacturers and federal and provincial public works departments to new principles and new information. Results of the Division's research are used in the improvement of the National Building Code, an advisory document offered as a model building by-law, and used by most of the municipalities of Canada.

The *Division of Chemistry* is concerned with supplying new scientific information for the development of Canada's natural resources and chemical industries. Most of its work is devoted to basic studies, although these often produce practical results. For instance, a long-term investigation on the contacting of fluids and solids resulted in a successful commercial operation for drying grain. The same method has been extended to chemical reactions and to removing liquids from other materials. Another long-term project of considerable industrial potential concerns the factors responsible for the stability, or the destruction, of suspensions of solids in liquids and a method has been devised for easily separating almost any suspended solid from the liquid surrounding it. The same technique

can be used to prepare dense spherical agglomerates of selected composition. Work on separation processes has been expanded to include the separation of dissolved solids. It has been shown that virtually all dissolved salts can be removed from water by filtration through an appropriate medium, and tests with other materials are in progress. Then, too, the study of chemical reactions at very high pressures has resulted in the successful preparation of a stable polymer that could not be produced by conventional means. The development of a procedure for anodically depositing metal oxide films resulted from long-term studies on metallic corrosion.

The 11 sections of the Division are: analytical chemistry, chemical engineering, colloid chemistry, high polymer chemistry, high pressure, kinetics and catalysis, metallic corrosion and oxidation, metallurgical chemistry, physical organic chemistry, hydrocarbon chemistry and textile chemistry. Much of the work falls under the general headings of petroleum or metal chemistry, in that several sections work on topics related to one of these fields.

The Division has a small permanent staff that works, in collaboration with about 50 young post-doctorate fellows from all over the world, on long-term fundamental investigations in organic, physical and theoretical chemistry designed to provide new basic knowledge. The work in organic chemistry includes investigations of the structures of alkaloids, studies of the infrared spectra of steroids, and the synthesis of nucleic acids, porphyrins and compounds labelled with isotopes. Other groups deal with chemical kinetics and photochemistry, the study of the ionization potentials of free radicals by mass spectrometry, Raman and infrared vibrational spectroscopy, organic crystal semi-conductors, and the application of high resolution proton magnetic resonance techniques to the study of hydrogen bonding and other molecular interactions. Still others investigate the thermal properties of simple solids, the heats of micellization by microcalorimetry, and the thermodynamics and stress-strain relationships associated with the adsorption of fluids by active carbons. Theoretical studies cover quantum-mechanical and many-body problems.

The general work of the *Division of Mechanical Engineering* is related to the thermodynamic aspects of engineering production by conventional machinery and by application of fluid mechanical principles to the generation of extreme temperatures in high-pressure gases. In support of the human contribution to higher productivity, another general body of work relates to the behaviour of the human operator—his dexterity and capability and the effects on his performance of fatigue, lack of sleep, and alcohol. The more specific activities of the Division are related to processes of production and to transportation.

In view of the importance in Canada of the lumbering industry and also of the economic advantages of saving waste, some work is in hand to assess the sawing of lumber by means of high-pressure water jets. In the manufacturing aspects of mechanical engineering, the Division has long been active in the study of problems—both thermodynamic and mechanical—encountered in different kinds of heat engines and is now concentrating on diesel engines and gas turbines. Its experimental shops have introduced improvements and refinements in a number of manufacturing processes, such as the precision grinding of gearing and electrodischarge and electrochemical machining. As a subsidiary part of the work on manufacturing techniques, the Division has in hand a substantial body of development work related to the improvement of surgical instruments and apparatus, the first of which is now going into commercial production. Because many of its facilities are not duplicated elsewhere in Canada, it is part of the Division's working policy to assist manufacturers in the testing of a great variety of products.

Because the dimensions, topography and trade patterns of Canada render all forms of transportation of primary consequence to the economic and social well-being of the country, there has been, for a number of years, substantial research activity in this direction. The land transport work has arisen from problems with urban bus systems and from problems (mostly mechanical) arising from railway operations. Programs are under way or completed relating to the operation of diesel locomotives on a wider range of fuels, to the im-

provement of air brake operation in winter, to the braking and running smoothness of long trains and, recently, to the improvement of remote switching necessary for Central Traffic Control.

In the area of sea transport, the Division is concerned with ship design and canal and harbour facilities. In the former category, a steady procession of new designs passes through the Ship Laboratory for investigation of hull lines, propeller design, steering and rough water characteristics, supplemented by work at sea on the stresses on ships due to running in rough water. Regarding the improvement of harbours, work is under way on a model of the St. Lawrence River extending from Montreal to Father Point, the object of which is to lend the maximum possible scientific impetus to the development of the Port of Montreal.

In the field of air transport, the problem confronting Canadian manufacturers is the selection of types of aircraft which can be sold in sufficient numbers in world markets to justify the development costs. The activities of the Division are concentrated on acquiring a reasonably wide-based knowledge of the possible machinery arrangements for civil vertical take-off aircraft, which are believed to represent one of the great aeronautical opportunities of the future.

The *National Aeronautical Establishment* conducts aeronautical research to meet the needs of military and civil aviation, working in co-operation with the Canadian aircraft industry; it also carries out its own research program. Its studies therefore centre around problems of aerodynamics, aircraft structures and materials, and flight mechanics. It has the only development wind tunnel facilities in Canada and is thus equipped to handle most of the industrial or military aircraft developments of the foreseeable future. Aerodynamics research from low speeds up to about 17 times the speed of sound is carried out in the wind tunnels: considerable attention is being given at present to low-speed problems of vertical and short take-off aircraft. Other studies include work on the aerodynamic characteristics of high-thrust propellers, on wings with submerged fans and on wings immersed in powerful slip-streams. The research on structures and materials involves investigation of aircraft accidents, the theory of structures, fatigue and fracture, flight loads statistics and aircraft hydraulics. The flight mechanics program covers research on flight safety and flying stability and control, the development of a crash position indicator for locating crashed aircraft, atmospheric physics, and anti-submarine magnetometry.

A growing and highly diversified program of assistance to smaller industries is developing, the work relating mainly to product development, improvement or testing. Concerning aircraft utilization, efforts have been directed toward those areas of national activity where aerial methods might offer economies in cost or improvements in effectiveness, such as agricultural applications, forest fire fighting, aerial logging, high sensitivity magnetic surveys, precipitation physics, and studies of atmospheric turbulence.

The work of the *Radio and Electrical Engineering Division* includes engineering projects of interest to Canadian industry and fundamental research in electrical science. The engineering program in the high-voltage field includes studies of corona loss and radio interference from direct-current transmission lines, and the development of current comparators for very accurate measurement of current and voltage ratios. Assistance is given to industry in the design, production and evaluation of new equipment, and in the solution of such problems as the design of antennas, microwave film and paper dryers, and electronic aids to navigation. A recently developed radar altimeter to be used in taking inventory of forests by photogrammetry has been adapted, at the request of the UN Food and Agriculture Organization, for use in tropical rain forests.

In the field of bio-medical engineering, new techniques in electrocardiography that have been successfully tested in clinical practice will allow reliable monitoring of a fetal heartbeat. The Division has co-operated with members of the medical profession in the establishment of safety standards in the use of electronic treatment and diagnostic equipment in hospitals.

With the increasing use of computers in all branches of science, the Division has become increasingly concerned with the development of computer techniques and their many applications, such as those related to the problem of communication between man and machine and the application of computers to education. A computer-aided teaching system has been developed, as well as a course unit for beginning geography students to test the usefulness of the system.

Facilities at the Algonquin Radio Observatory, completed in 1966, include a multi-element interferometer used for solar observations, and the 150-foot parabolic radio telescope. Astronomical measurements have been made with this telescope with a degree of accuracy not hitherto attainable, and many observation programs have been initiated at the observatory by NRC scientists and by astronomers from Canadian and foreign universities. Fundamental studies are also carried out in the fields of upper atmosphere research, wave propagation, solid state physics, and the behaviour of particles at ultra-high vacuum.

The work in the *Division of Physics* is divided between research in fields of physics deemed most likely to contribute in a practical way to the Canadian economy and research to improve the accuracy and precision of fundamental physical standards on which all measurements are based. The Division has primary standards equal to any in the world in the fields of mass, length, time, electricity, temperature, photometry and radiation. The sections of the Division are: acoustics, diffraction optics, electricity, heat and solid state physics, high temperature physics, instrumental optics, optical physics, mechanics, photogrammetric research, radiation optics, and X-rays and nuclear radiations.

Examples of specific projects under way include: a study of physiological noise and its relationship with the threshold of hearing, resulting in the development of a new probe microphone which should find wide application in sound measurement; new precision and accuracy are envisaged for audiometers of great importance in connection with hearing loss in industry and elsewhere; researches directed toward improving the resolving power of optical systems, the design of a hydrogen maser offering potential as a frequency standard for defining time, measurements on various metals and ceramics aimed at elucidating the mechanism of heat transfer at high temperatures, the establishment of an international standard neutron source, and investigation and application of the very intense and very monochromatic radiation emitted by gas lasers. Several of the Division's developments are being produced commercially; among these are noise-excluding ear defenders, a revolutionary analytical plotter for making maps from aerial photographs (for military or for civilian use), six- and five-figure potentiometers, a precision direct reading thermometer bridge, an instrument for measurement of resistance to a precision of one part per million, and a new instrument for measuring more accurately and quickly electrical voltages of up to 3,000 volts.

To permit standardization of X-rays and nuclear radiations at higher energies and for general research in the energy range, the Division has installed a 4-MeV Van de Graaff generator and a 40-MeV linac facility.

Investigations are also under way on cosmic rays and high-energy particle physics, solid state physics, laser and plasma physics, spectroscopy and X-ray diffraction. The work is on fundamental problems that do not have immediate application but advance the frontiers of knowledge and supply the basis for further progress in the applied fields. Advances in the study of cosmic rays and energetic particles are being made by means of a specially designed instrument package operating aboard the Canadian earth satellite *Alouette II*. The package is sending back vital new information about the Van Allen radiation belts and about the artificial belts created by atomic explosions.

The solid state group studies the electrical, thermal and mechanical properties of metals and semi-conductors, especially at very low temperatures. The laser and plasma physics group has recently made an important contribution by observing the scattering of a ruby-maser beam by a plasma; this study leads to a determination of electron tempera-

ture and electron concentration. In the spectroscopy group, the structures of atoms and molecules are investigated by means of their microwave, visible and ultra-violet spectra, and considerable work has been done on optical masers.

The X-ray diffraction laboratory undertakes fundamental work in molecular and crystal structure and identification problems for government laboratories. Two of the major projects concern narcotics and vanadium minerals. X-ray diffraction methods are extremely valuable for identification purposes as they are non-destructive and require only very small amounts of material.

The *Atlantic Regional Laboratory* at Halifax in Nova Scotia is engaged in practical and fundamental studies in chemistry and biology related to the resources and industries of the Atlantic Provinces. Such studies include investigations of: the biochemistry and physiology of marine algae, fungi, bacteria, lichens, mosses and higher plants; the chemistry of naturally occurring organic compounds; and the physical chemistry of inorganic compounds at high temperatures. A major objective is to develop varieties of seaweeds with enhanced commercial value and to investigate the growth and cultivation of seaweeds and other marine algae. Surveys are being made to reveal new sources of seaweeds. An applied project on toxic microfungi in pastures is being carried out in collaboration with the Canada Department of Agriculture at Nappan, N.S. Fundamental studies on inorganic reactions at high temperatures may be of value to the steel and glass-making industries, and research in organic reactions, which includes work on methods of synthesis, may also eventually have industrial value. Some of the work in biochemistry and physiology is related to medically important compounds such as antibiotics and drugs that affect mental processes.

One of the aims of the *Prairie Regional Laboratory* at Saskatoon in Saskatchewan is to develop wider uses for crops grown on the prairies. The Laboratory program is carried out by five sections: physiology and biochemistry of fungi, physiology and biochemistry of bacteria, plant biochemistry, chemistry of natural products, and engineering and process development. Research is therefore carried out on the properties and reactions of plant components, and on the biological, chemical and engineering processes for turning them into other compounds. The development of oil-seed crops as alternatives to seed crops has received considerable attention.

Scientists at the *Prairie Regional Laboratory* have developed a new tool for the identification of plants through chemotaxonomy, the study of characteristic chemical compounds in plants to correlate their species. This research has a valuable potential in the solving of some of the practical problems encountered by the forestry industry—in detecting usable trees, in reforestation programs and in tree breeding.

For some time, the Laboratory has studied major plant constituents such as carbohydrates, protein, starch, lignin and fibres. An example of this work is the definition of the chemical structure of several polysaccharides found in cereal grains and important in baking, milling and fermentation technology. Attention is also being given to minor plant constituents, such as phenols, flavonoids and terpenes, which are known to have fungicidal and germicidal properties. A laboratory has been set up for the systematic study of extractives from local plants and shrubs.

Developments from the Laboratory attracting commercial interest are: the production of feed supplements by direct use of micro-organisms, and specific essential amino acids such as lysine; poly-hydroxy alcohols such as glycerol and arabitol; hydroxy fatty acids; and the possibilities of producing specific glyceride types using the enzyme systems of micro-organisms. The Laboratory works in co-operation with the Canada Department of Agriculture to help maintain Canada's position as the world's leading exporter of rapeseed, used to produce cooking oils, dressings and oil for use in margarine and shortening. A group working in the field of mycology is concerned with the production of new chemicals, antibiotics, alkaloids and amino acids.

The function of the *Space Research Facilities Branch* is to develop and provide facilities to meet the needs of the upper atmosphere and space research programs of Canadian scientists in universities and government agencies. At present its work is restricted primarily to the use of sounding rockets. The major facility is the Churchill Research Range which is operated for the benefit of Canadian and United States scientists and has a joint Canadian-United States funding. It has capabilities for launching many kinds of sounding rockets and balloons carrying scientific experiments to investigate the earth's upper atmosphere. Associated ground-based instruments are available to study the aurora borealis by photographic and spectro-photometric methods. There is also, for occasional use, a small launching facility at Resolute Bay in the Northwest Territories and temporary launch facilities are planned for other locations for use in studies associated with the eclipses of the sun in 1970 and 1972. The Branch also operates the satellite tracking and data reception station near St. John's in Newfoundland and the Great Whale Geophysical Station at Poste-de-la-Baleine in Quebec.

In the implementation of the sounding rocket program, the Branch is responsible for providing the vehicles and incorporating the scientific experiments into suitable payloads, with associated telemetry and other devices; this work is carried out mainly by industrial contracts. The work of the Branch also includes the reduction of flight data to provide vehicle trajectory and attitude information to experimenters, and the provision, from the telemetered information recorded on magnetic tape, of data required by individual scientists in any form desired.

University Research Support.—From its inception, the National Research Council has encouraged and supported research in Canadian universities. A system of postgraduate scholarships and post-doctorate fellowships gives assistance to students, Canadians and landed immigrants who have shown promise of research ability. The awards are: Post-doctorate Fellowships; Postgraduate Scholarships; Bursaries; 1967 Science Scholarships; Post Industrial Experience Research (PIER) Fellowships; and Postgraduate Scholarships in Science Librarianship and Documentation. Awards are for advanced studies and/or research in science and engineering and are competitive, with academic excellence being the main criterion in the selection of successful candidates. In addition, the Council in 1970 introduced a post-doctorate program for the support of research in Canadian industry; these Industrial Post-doctorate Fellowships are intended to encourage highly qualified science and engineering students to seek careers in industry.

Post-doctorate Fellowships and Industrial Post-doctorate Fellowships are awarded to candidates who have recently completed or who are about to complete their requirements for a doctorate degree. The purpose of the two programs is to enable those who have received a doctorate degree to undertake, prior to becoming permanently employed, post-

doctoral research for up to two years after receiving their degree. Post-doctorate Fellowships are tenable in Canadian universities and in universities and other institutions abroad; Industrial Post-doctorate Fellowships are tenable in industrial organizations in Canada.

Postgraduate Scholarships are awarded for tenure in Canada and a successful candidate may elect to carry out his program at the Canadian university of his choice; however, where facilities for a Ph.D. program are limited or lacking in Canada, the candidate may receive special permission to hold his scholarships at a university abroad. The winner of an award for a first year of graduate study has the option of deferring tenure of his scholarship for up to two years to encourage him to investigate career opportunities in industry.

Canadian universities receive an annual quota of Bursaries from NRC and are responsible for the selection of students for these awards. These awards are not transferable and are tenable only at the university that nominated the student for the award.

The 1967 Science Scholarships, introduced to celebrate the centennial of Canadian Confederation and the 50th anniversary of NRC, are intended to encourage young men and women of outstanding intellectual promise to pursue postgraduate studies and research leading to doctorate degrees, as well as to stimulate exchanges of students between different cultural and geographical regions in Canada. Scholars must select for graduate studies a university other than the one from which their first degree was obtained.

Post Industrial Experience Research (PIER) Fellowships, introduced in 1966, provide an opportunity for persons with industrial experience to gain additional research experience and training. A limited number are made available each year to candidates who have had not less than five years of industrial experience.

Postgraduate Scholarships in Science Librarianship and Documentation, introduced in 1967, are intended to encourage graduates with a degree in science or engineering to become science librarians, documentalists or science information specialists in an effort to meet the demand by universities, research laboratories, industrial firms and related organizations for properly qualified persons in this field.

Assistance to Industry.—The application of science to industry has been a major concern of NRC since its founding. There is a constant flow of personnel and information between NRC laboratories and those of industry, and roughly 70 p.c. of the Council's own effort involves applied research intended for industrial use. Contract research on specific projects and a variety of testing and standardization work are undertaken. Inventions from NRC laboratories are carried through the patent stage, then made available for manufacture through Canadian Patents and Development Limited, a subsidiary of NRC.

In an effort to improve the co-ordination of the various agencies of government concerned with administration of industrial assistance programs, a study group has been formed of the major participants, including the Department of Industry, Trade and Commerce, the Defence Research Board, the Department of Finance, the Treasury Board and NRC. This group is active in its efforts to devise improved incentive programs. Staff members of NRC have organized meetings with representatives of Canadian research management, and from these there is emerging a much clearer picture of the problems of industrial research and development in Canada.

During seven years of operation, nearly \$90,000,000 has been invested in the Industrial Research Assistance Program (IRAP) administered by NRC, with industry contributing approximately 58 p.c. of the total cost. During the fiscal year 1969-70, close to 100 manufacturing companies participated in the program in which 700 scientists and engineers and a substantial number of technicians were employed. The highest level of research activity continued to be in the chemical industries, followed by electrical, pharmaceutical, paper and allied products.

With the time interval between research discoveries and the appearance of an improved product in the market place measured in decades, it is too early to forecast the effect of

the program on the Canadian economy. The rate of growth of the IRAP in the early stages was governed by a shortage of senior scientists and research engineers, time needed to build laboratories and the share of company funds available to match government assistance. Recent reports from companies participating in the program reveal a considerable change with a substantial increase in staff, in the purchase of sophisticated research instruments and in capital expenditures which have more than doubled since the Program started.

The number of small companies applying for IRAP assistance is growing rapidly and there are a number of case histories showing that small companies can do highly successful research and development with the appropriate incentives. A close working relationship has been effected between the industry group, some 40 university professors in a consulting capacity, and approximately 100 scientists as advisers or liaison officers from government laboratories. This new link between industry, universities and government is improving communication and providing a feedback of industrial activities and requirements into the universities and government laboratories.

Technical Information Service.—NRC has a Technical Information Service (TIS) which was established in 1945 to help, on request, small secondary manufacturing industries to keep pace with advances in research and technology. TIS today maintains direct contact with industry through a system of field offices and provides, without cost, information and advice on technological matters.

The Industrial Engineering Section has nine industrial engineers in the field and three in Ottawa, who are applying their engineering knowledge to help small companies on a do-it-yourself basis in resolving their operating problems. This is done through information, guidance and assistance in the analysis of work situations, improvements in production processes and facilities, and implementation of systems by which management can operate and control production processes for optimum results.

The Technical Developments Section further facilitates the flow of technical information to Canadian industry. An experimental program is being carried out with the co-operation of some 3,000 companies each of which has provided TIS with a listing of its areas of industrial interest; these are matched by computer with the information items held by the Technical Developments Section and selected lists are issued to each company.

Engineers in the TIS field offices visit or contact thousands of small companies in every part of Canada and answer written or verbal enquiries numbering well over 10,000 a year. Problems requiring information in greater depth are referred to the Ottawa staff who draw upon experience with previous enquiries, the National Science Library, experts in government departments and industry, and foreign information services for suitable information which is forwarded to the enquirer, sometimes accompanied by suggested solutions to their problems.

The National Science Library.—Plans for developing a central scientific library were proposed as early as 1924 by the Honorary Advisory Council for Scientific and Industrial Research, established in 1916, now the National Research Council. The Library grew slowly until 1928 when temporary research laboratories were established near the present Sussex Drive building which was opened in 1932. Since then it has been developed to parallel the growth and expansion of the laboratories and the national interests and activities of the Council with the result that in 1953, under an agreement with the more recently established National Library, the National Research Council Library formally assumed responsibility for national library services in the fields of science and technology. This responsibility was confirmed by Act of Parliament in 1966 (SC 1966-67, c. 26). In 1967, the President of the Association of Canadian Medical Colleges recommended to the Government that responsibility for national services in the medical and health sciences be assigned to the National Science Library.

The National Science Library now serves as the focal point of a national scientific and technical information network. Through co-operative measures with both national and international information agencies, its activities are designed to provide the Canadian scientific and industrial communities with direct and immediate access to resources and services not available locally. Increasing use is being made of computer and related electronic data processing equipment to organize, retrieve and expedite the dissemination of information. One such service is a selective dissemination of information (SDI) system available on a regular (weekly or bi-weekly) subscription basis to Canadian scientists and engineers. The Library's collection, which is doubling in size every ten years, comprised approximately 760,000 volumes by the end of March 1969. Most of this material, including journals and other serials, books, pamphlets and technical and research reports (many in microform), is housed in the main Library with smaller and more specialized collections in eight branch libraries.

The resources of the Library are made available by means of an extensive inter-library loan and photocopying service. This service also identifies references to obscure publications and, if necessary, attempts to locate holdings elsewhere in Canada or abroad. For purposes of current awareness, the Library issues twice a month its *Recent Additions to the Library*. The *Union List of Scientific Serials in Canadian Libraries*, prepared by the Library with the co-operation of other libraries in Canada, records the title, holdings and location of approximately 40,000 scientific and technical journals received by over 200 libraries in Canada. The data for this publication is stored on magnetic tape and updated regularly for computer print-out as new editions are required.

Librarians trained in science or engineering and subject specialists provide a reference and research service to meet Canadian needs for information. Many inquiries require carrying out a literature search and preparing a list of relevant references. Other requests for information may be answered from the staff's own knowledge or with advice from the scientific and technical personnel of the Council and other government departments and agencies.

The Canadian Index of Scientific Translations, a card index to the location in Canada or elsewhere of translations of articles written in foreign languages, is maintained by the Library. Translations of scientific articles prepared by the Library's Translations Section are listed and made available in Canada and abroad. A complete English translation of the Russian journal *Problemy Severa* (*Problems of the North*) is also prepared by this Section. The National Science Library publishes the *Directory of Canadian Scientific and Technical Periodicals*, *Conference Proceedings in the Health Sciences*, *Scientific and Technical Societies of Canada*, *Scientific Policy*, *Research and Development in Canada* (a bibliography), and other publications related to its own activities.

In December 1969, the Government directed the National Research Council, under the general direction of the National Librarian, to develop, in concert with existing information organizations, a national scientific and technical information system to encompass the natural sciences and engineering and to appoint an advisory board of directors with responsibility for formulating general policies and guidance toward their implementation.

Associate Committees.—NRC's associate committees provide an important instrument for studying, co-ordinating and promoting research on problems of national significance. The members of these committees are experts in the different aspects and disciplines related to the problem and are drawn from university, industry and government laboratories. The committee studying a particular problem collects and collates the necessary information, delineates research problems, co-ordinates research and may initiate new research necessary to the solution of the problems. Each committee has defined objectives and when these are accomplished the committee is disbanded. Currently, more than 40 associate committees are operating in such diverse fields as aerodynamics,

dental research, bird hazards to aircraft, water pollution, paint research, plasma physics, and soil and snow mechanics. Some associate committees also function as national committees for an international scientific union.

An Associate Committee on Scientific Criteria for Environmental Quality has been established by the Council to collate and publish an integrated set of scientific requirements on which an evaluation of the quality of the environment can be based. The criteria will be designed to assist those at the federal, provincial and municipal levels who have the responsibility for the formulation and enforcement of environmental quality standards.

International Affiliations.—NRC maintains a scientific liaison office in London, England, for the exchange of scientific information and also has a scientific exchange agreement with the Soviet Academy of Sciences that provides for visits of scientists ranging in duration from three weeks to nine months; the Council has accepted responsibility for exchange of Canadian scientists with France under the Cultural Agreement between the Governments of Canada and France, and an agreement on scientific exchanges has been concluded with Brazil.

In addition, NRC administers a number of international programs for exchanges of scientists and scientific information. It also supports Canadian membership in organizations such as the International Scientific Unions, helps to finance scientific congresses in Canada, and aids Canada's participation in world scientific projects.

Subsection 3.—Atomic Energy of Canada Limited*

Historically, Canada owes its current position as one of the five most advanced nations in atomic energy development to its uranium deposits exploited between the Wars for the production of radium. The switch during the Second World War to interest in uranium for nuclear weapons development, concurrently with the need for a base for the United Kingdom atomic energy research program, brought Canada into the tripartite councils with the United States. Moreover, French scientists who had pioneered the idea of the heavy water natural uranium chain reactor were working with the United Kingdom team. Canada undertook jointly with them to develop the heavy water reactor for the production of plutonium. Based on pilot experiments with the ZEEP, a zero energy pile built at Chalk River, Ont., in 1945, the adjacent NRX reactor was built and came into operation in 1947. It was so successful that in 1949-50 both the United States program of giant heavy water production reactors at Savannah River and the combined research and production reactor, NRU, at Chalk River, were committed.

To conduct the growing program of atomic energy research and development involving reactor construction and operation and the production of isotopes, the Crown company, Atomic Energy of Canada Limited (AECL), was formed in 1952 to take over the research from the National Research Council and the radio-isotope business from a sister Crown company, Eldorado Mining & Refining (1944) Limited. The direct cost of the NRX reactor did not exceed \$10,000,000. The NRU reactor, completed in 1957, cost \$58,000,000 but earned a revenue of over \$30,000,000 from the sale of plutonium to the United States. Since 1951 these two main reactors at Chalk River have produced other isotopes for commercial sale, revenue from which has increased from about \$500,000 in 1952 to over \$10,000,000 a year.

In May 1970, a new, small nuclear reactor (called Slowpoke) with a wide range of possible applications was brought into operation at the Chalk River Nuclear Laboratories

* Prepared by Dr. W. B. Lewis, Senior Vice-President, Atomic Energy of Canada Limited, Chalk River, Ont.

(CRNL). "Slowpoke" stands for Safe Low Power Critical Experiment. The core of the reactor, containing uranium fuel, is only nine inches in diameter and 10 inches high. Neutrons from it can be used in the activation analysis role to detect impurities in industrial and environmental materials, contributing to quality control and pollution control, respectively. It can also produce very short-lived radioactive isotopes for use as tracers and for the treatment of some medical tumors. Another possible use is neutron radiography. The reactor is designed to be safe, reliable and maintenance-free, to turn off and on with the flick of a switch and to run for as long as 10 years without being re-charged with fuel. Assuming it meets the economic and technical requirements, Slowpoke will be produced and sold by AECL Commercial Products.

AECL is today the agency primarily responsible for research into atomic energy and its development for peaceful purposes. Fundamental research has always been and continues to be the cornerstone of this development. However, there are avenues of research in the field of atomic energy in which AECL plays little or no part. Its research and development effort is limited partly by the nature of the resources and facilities available to it and partly by its policy of concentrating these resources on the lines of investigation that appear to be most promising.

The largest and best known single AECL development is its nuclear power program, employing the CANDU (Canadian Deuterium Uranium) power reactor. These reactors are fuelled with uranium and moderated with heavy water (deuterium oxide). Developed out of the design and operating experience gained from its major research reactors, NRX and NRU, CANDU reactors are capable of further development to meet the challenge of the competition from other designs for the foreseeable future. By 1978, the Canadian-designed nuclear power generating capacity already committed will total over 6,000 megawatts (one megawatt = 1,000 kilowatts), and strong efforts are being made to interest other countries in the purchase of nuclear power reactors of the CANDU type.

The second largest commercial business conducted by AECL is that of AECL Commercial Products in processing and marketing radioactive isotopes and the equipment for utilizing them. The successful efforts expended in developing new applications to increase the world-wide sales of isotopes have resulted in the design and construction of major irradiation facilities for a growing list of industries and other users. These efforts demand comprehensive supporting services ranging from sophisticated engineering workshops to specialized services peculiar to the industry, such as those dealing with the measurement, limitation and control of radiation hazards.

Research and Development.—The principal AECL research and development tools are the research reactors already mentioned and described in Statement I. Of these, three (NRX, NRU and WR-1) are major research reactors and all three have many facilities in their cores for irradiation of materials for extended periods. In addition, the reactors have horizontal neutron beam holes which allow intense neutron beams to be directed through the reactor shielding to experimental rigs. Typical experiments include studies in the physics of fission, neutron capture (n, γ) reactions, radiation damage in materials, and on the atomic structure and lattice dynamics of crystals revealed by the precise loss of energy of neutrons inelastically scattered. In NRU, one of the beam holes is provided with a fast-spinning beam chopper to permit time-of-flight studies on neutron interactions with matter. The reactors also have special separate fuel channels, or loops, for experiments on materials under reactor core radiation and a variety of coolant conditions. The experiments include fuel and materials studies, coolant system chemistry and heat transfer measurements for power reactor designs. The in-reactor loop system is complemented by a number of out-reactor loops in which similar experiments may be conducted in the absence of a radiation field.

I.—AECL RESEARCH REACTORS

Name, Location and Use	Date of Start-up	Power	Fuel	Moderator	Coolant
Zero Energy Experimental Pile (ZEPP), Chalk River, Ont.—Lattice experiments and investigation of neutron spectra	1945	150 w. max	Various	Heavy water	—
National Research Experimental (NRX), Chalk River, Ont.—Research, engineering tests and isotope production	1947	30,000 to 40,000 kw.	Enriched uranium ¹	Heavy water	Ordinary water
National Research Universal (NRU), Chalk River, Ont.—Research, engineering tests and isotope production	1957	90,000 to 120,000 kw.	Enriched uranium ²	Heavy water	Heavy water
Pool Test Reactor (PTR), Chalk River, Ont.—Reactivity and absorption measurements	1957	100 w.	Various	Ordinary water	Ordinary water
ZED-2, Chalk River, Ont.—Lattice experiments.	1960	100 w.	Various	Heavy water	—
Whiteshell Reactor No. 1 (WR-1), Pinawa, Man.—Research and engineering tests	1965	40,000 to 60,000 kw.	Enriched uranium	Heavy water	Organic liquid

¹ Conversion from natural uranium to enriched uranium commenced in 1962.
 uranium to enriched uranium commenced in 1964.

² Conversion from natural

A further major facility at CRNL is the 10,000,000-volt "MP" Tandem Van de Graaff Accelerator, associated with extensive experimental and data analysis systems online to computers. Among its many uses are precise studies of the structure and excited states of heavier atomic nuclei. A beta-ray spectrometer of extremely high resolution is used for various studies of radionuclides, often in association with the accelerator laboratory. A 10,000-acre controlled area of undeveloped land surrounding the laboratories at CRNL is used for environmental and other studies including radioactive waste management. A similar area exists at Whiteshell Nuclear Research Establishment (WNRE) in Manitoba. Other important equipment includes a mass separator, mass spectrometers for solids and gases, a scanning electron microscope, high-power electron microscopes, an electron probe micro-analyser, various mechanical test rigs, a radio frequency accelerator laboratory and high-speed computers.

AECL basic research projects include some that have pioneered new techniques. Thus, the high resolution lithium-drifted germanium gamma-ray detectors pioneered at CRNL in 1963 have been used with the Tandem Accelerator to measure nuclear lifetimes by gamma-ray Doppler shift measurements. New types of neutron spectrometers were designed for studies of the structural dynamics of condensed matter by inelastic neutron scattering techniques. The "channelling" of ions between rows of atoms in crystals is used in several techniques to find the location of foreign or displaced atoms, the lifetime of nuclear fission, radiation damage and annealing behaviour in metals and semi-conductors, atomic configurations in surface oxide films and the orientation of crystals.

A pioneer study has been made of the uptake of tritiated water and its subsequent fate in the human body. Special lines of research at WNRE include the properties of reconstituted biological membranes. Radiation biology studies at CRNL are especially concerned with recovery from radiation damage in chromosomes and organisms as well as hereditary effects of mutations.

A network of sensitive monitors for atmospheric neutrons from cosmic-rays and other sources has been established at selected locations across the world. The most sensitive is located at Deep River near CRNL. These monitors have provided early warning of solar flares useful to the United States interplanetary space program.

In AECL's applied research program, the development of research and power reactors continues to be of importance. Fuel development takes account not only of the needs of the present generation of reactors but also of the advanced systems now being explored. Development of other reactor core components continues in parallel. Mechanical developments include fuel-handling systems and research equipment for making measurements in the cores of operating reactors, including creep, dimensional and other property changes. Other studies include heat transfer and fluid dynamics, reactor safety studies, and reactor instrumentation and control. While applied research and development on fuels and materials is carried out at both CRNL and WNRE, the behaviour of a selected composite organic liquid as reactor coolant receives special study at WNRE.

Reactor physics studies make use of the small reactors ZEEP, ZED-2 and PTR at CRNL, and extensive use of the computer facilities.

Nuclear Power in Canada.—Electric power generation in Canada is mainly in the hands of large utility commissions and companies. The largest have developed on a base of hydro-electric power. The water resources in Ontario are mostly already harnessed, and oil and gas come from such distant sources that coal is imported. Since 1952 it has seemed likely that nuclear power could be developed to meet the economic competition.

The core of "Slowpoke", the 10-inch-high, simple-to-operate nuclear reactor recently brought into operation by AECL. In the background, for comparison, is NRX, one of the two large research reactors at Chalk River.

The fuelling machine for the Gentilly power station under test at AECL Power Projects, Sheridan Park. The machine will load and unload fuel from the bottom of the vertically oriented reactor, which will be in operation in early 1971.

It has proved necessary to build very large nuclear generating stations to realize this prospect. The first, located at Pickering on Lake Ontario near Toronto, is scheduled to come into service in 1971-74 and has four 500-megawatt units for a total of 2,000,000 kilowatts. The prospect is now that abundant electric power will be available at a unit cost that lowers as demand increases. A 3,000,000-kilowatt station having four 750-megawatt units is under construction at the Bruce site on Lake Huron. This site, first known as Douglas Point, was chosen in 1959 for the first "full-scale" nuclear plant proposed as two 200-megawatt units. One of these was constructed and came into operation in 1967 but by then was too small to meet the economic competition. The type of nuclear power reactor adopted for all the above stations was evolved by AECL in conjunction with The Hydro-Electric Power Commission of Ontario and the Canadian General Electric Company. A small demonstration prototype power reactor (NPD) of 25 megawatts electrical rating has operated satisfactorily since 1962 at Rolphton, not far from CRNL on the Ottawa River. The type is characterized as heavy water cooled and moderated, fuelled in pressure tubes by short bundles of fuel rods of natural uranium dioxide. The pressure tubes and fuel cladding are of a zirconium alloy. Other zirconium alloys of greater strength and for longer life are being developed by AECL and industry. The pressure tube type of heavy-water-moderated reactor has been given the name CANDU.

Heavy water under pressure (PHW) as a coolant has been valuable in leading to an economical reactor design, but it is expensive and its toxicity and high pressure cause difficulty in maintaining leakage-free systems. Other coolants are therefore under study for CANDU reactors, in particular the organic coolant used in the WR-1 reactor (Statement I) and boiling ordinary or light water (BLW), selected for the 250-megawatt prototype at Gentilly, Que. (Statement II). That table also notes that the NPD reactor was converted successfully in 1968 to operate with the heavy-water-coolant boiling. This mode of operation promises a means of raising the efficiency of future large heavy-water-cooled reactors. The best promise, however, of higher efficiency is offered by the organic coolant because of its higher operating temperature; higher efficiency lowers the fuelling cost and the capital cost per kilowatt and also reduces the waste heat.

II.—CANADIAN NUCLEAR POWER REACTORS

NOTE.—All reactors listed operate with natural uranium fuel and heavy water moderator.

Utility	Type ¹	Power MWe Net	Name or Location	Nuclear Design Engineers ¹	Date of First Power

¹ Explanation of abbreviations:—

CGE = Canadian General Electric Company Limited

DAE = Department of Atomic Energy, India

NPD = Nuclear Power Demonstration

RAPP = Rajasthan Atomic Power Project

KANUPP = Karachi Nuclear Power Project

PHW = Pressurized Heavy Water coolant

BHW = Boiling Heavy Water coolant

BLW = Boiling Light Water coolant

² Converted from PHW to BHW operation in 1968.

AECL Power Projects is responsible for the engineering of nuclear power generating systems and the management of complete projects; it acts in the role of nuclear consulting engineer for utilities. It undertakes the detailed design and late-stage development of power reactors, including control systems and fuel-handling mechanisms. In addition to its design offices, Power Projects also has extensive development and testing laboratories at the Sheridan Park Research Community near Toronto.

The Bruce Nuclear Generating Station will be associated with an AECL-owned, 800-ton-a-year heavy water production plant. This, in conjunction with a matching capacity independently owned and being built in two plants in Nova Scotia, is expected to meet the demand from reactors for use in Canada.

Commercial Products.—The group that now forms AECL Commercial Products has had quite a long history of development. For example, in 1951 they produced a unit, incorporating Cobalt-60 made in the NRX reactor, which was used at London, Ont., to treat the first patient to receive Cobalt-60 beam therapy. Since that time, some 700 cancer therapy units, designed and manufactured by Commercial Products, have been installed in 51 different countries. As designer and manufacturer of irradiation equipment, Commercial Products has now supplied 200 irradiators, other than cancer therapy units, to 33 countries. These irradiators range from small units to large installations. Important milestones were passed with the design and building of the world's first commercial food irradiator and the first two sterilization plants for medical products in North America.

There are now 38 isotope products produced in the NRX and NRU reactors at CRNL and processed by Commercial Products. As a result, Commercial Products is today one of the world's major suppliers of processed isotopes, a success greatly assisted by the research and development effort expended in devising new products and applications. This effort covers the fields of gamma-irradiation, medical applications, food irradiation, isotope process development, nuclear instrumentation, neutron applications, isotope power sources and radiation chemistry. Examples of the applied research and development work include the irradiation of potatoes to inhibit sprouting, the development of an aerial survey technique for use in uranium and thorium prospecting, and the use of radioactive tracers in an investigation of wood chip movements in the large digesters used in the pulp and paper industry.

In mid-1970, AECL Commercial Products set up the first Canadian neutron activation analysis service, using the antimony-beryllium neutron source in Ottawa and nuclear reactors at Chalk River. Activation analysis is used to detect mercury and other elements in foodstuffs and in a wide range of other materials by the technique of irradiating the substance with neutrons and then analysing the resulting radioactive isotopes produced. Some 60 elements—of the 90 in the periodic table—can be detected in quantities as minute as one part per million. The service was established to meet the growing demand for such data from scientists in government and industry.

Commercial Products maintains a consulting service equipped with a mobile radio-isotope laboratory, which can be used for on-location tracer studies and other consulting work. It also maintains a network of representatives in major countries.

Relations with Other Organizations.—A strong feature of the Canadian organization for atomic energy is that the regulatory body—the Atomic Energy Control Board—(AECB) is separate from the chief executive agency (AECL). However, close working relations are maintained. The President of AECL is, *ex officio*, a member of the Control Board and AECL staff are members of certain AECB advisory committees, especially those concerned with safety.

AECL shares with the Department of Industry, Trade and Commerce a desire to increase the participation of Canadian industry in the developing nuclear market and AECL's many overseas interests involve relationships with the Department of External Affairs and the Export Development Corporation.

While AECL does not make grants to universities, research contracts are negotiated in many cases in which the university has the necessary facilities and expertise. Some 20 Canadian universities undertake work for AECL and the value of these contracts in any one year is about \$750,000. However, the close relations that have been built up with universities are mainly the result of personal contacts. During the summer, more than 100 graduates and undergraduates of Canadian universities work at AECL establishments. A number of professors also use AECL facilities for research projects, a service which, due to the demand, is now available throughout the year under the aegis (at CRNL) of the Experiments Advisory Committee, a joint universities and CRNL committee. It is also noteworthy and relevant that some 60 former AECL staff now hold staff positions at Canadian universities, many of them as department heads.

AECL has encouraged and fostered Canadian industrial participation in many aspects of its program. One means is by the award of research and development contracts, on which some \$7,000,000 is spent annually. Amounts of the same order are also spent on professional and consulting services. Development contracts have contributed materially in qualifying Canadian companies to supply services, materials and equipment to the exacting standards required in the nuclear industry. As a result, two Canadian companies are now established as qualified and competitive suppliers of nuclear fuels. In other cases qualification results from trial orders, supported by the provision of a prototype or samples, specifications and assistance from the laboratories and technical staff.

In building nuclear power stations, since the utilities handle much of their own business, there has been only limited scope for private industry in Canada. The Canadian General Electric Company, which engineered NPD and engineered and supplied WR-1, also is responsible for the KANUPP nuclear power reactor for Pakistan. Owing to gaps in their program, a merger of the CGE design group and AECL Power Projects was entered into for a five-year period from July 1968.

International relations have been and continue to be important throughout the whole program. Many irradiations in the NRX, NRU and WR-1 reactors have been made for several countries at their expense or on a shared-cost basis and especially for the United States, the United Kingdom and Euratom. In exchange for information on the CANDU reactor program, the United States has for many years carried out an agreed research program at an expenditure of between \$500,000 and \$1,000,000 a year in support of the AECL program. Frequent technical meetings have maintained contact between the U.K. steam generating heavy water power reactor program and the CANDU program. Informal exchanges of visits and information with France have taken place for many years. These contacts have been strengthened and put on a more formal basis recently in view of a renewed interest in France in heavy water power reactors. Both the USAEC and the U.K. Atomic Energy Authority have continuously maintained liaison offices at CRNL. From time to time AECL has had a liaison office with the UKAEA and is establishing an office in Paris. Close relationships also exist between AECL and the Department of Atomic Energy (DAE) in India. The first Canadian-designed research reactor to be built outside Canada was built in a co-operative program, partly supported by the Colombo Plan, near Bombay. AECL also designed India's first heavy water nuclear power station, the Rajasthan Atomic Power Project (RAPP) now under construction in a co-operative program. There will be two reactors of 200-megawatt rating very similar to the Douglas Point CANDU in the RAPP station. Formal collaboration has been established also with Australia, West Germany, Italy, Japan, Pakistan, Spain, Sweden, Switzerland and the Soviet Union.

AECL is represented on a number of important international organizations and committees. Its Senior Vice-President, Science, represents Canada on the United Nations Scientific Advisory Committee to the Secretary General, and is also a member of the International Atomic Energy Agency (IAEA) Scientific Advisory Committee. Canada is a member of the board of governors of the IAEA and has participated in many advisory

Taiwan Research Reactor personnel being introduced to NRX at Chalk River. A modernized version of that research reactor is being supplied by Atomic Energy of Canada Limited to the Taiwan Atomic Energy Council for delivery by September 1973.

panels, conferences and symposia organized by the IAEA and has acted as host to meetings in Canada. AECL has seconded staff to positions at the Director level in the IAEA as well as to other positions. AECL organized Canada's participation in the three United Nations Conferences on the Peaceful Uses of Atomic Energy in 1955, 1958 and 1964. AECL has participated strongly in the United Nations Scientific Committee on the Effects of Atomic Radiation (UNSCEAR) as well as other *ad hoc* United Nations Committees. AECL has also contributed to the committees of the International Commission for Radiological Protection. AECL participates in the International Nuclear Data Committee (of the IAEA), European-American Nuclear Data Committee and the European American Committee on Reactor Physics, both of the European Nuclear Energy Agency. AECL also collaborates with the unions of the International Council of Scientific Unions in sponsoring and participating in International Conferences and working parties.

Employment and Financial Statistics.—Personnel, income and operating expenses of AECL for the year ended Mar. 31, 1969 were as follows:—

III.—AECL MANPOWER AS AT MAR. 31, 1969

Subsection 4.—Scientific Activities of the Department of Energy, Mines and Resources*

The Department of Energy, Mines and Resources is the earth sciences agency of the Federal Government, responsible for the discovery, investigation, development and conservation of the nation's mineral, water and energy resources. Its programs cover a broad spectrum, ranging through fundamental investigations of Canada's natural resources and their environments, applied research on methods of finding and extracting resources, economic research on markets and potential demands, and inter-disciplinary studies leading to the development of policies and plans for resource management. Of a total staff of about 5,200, about 3,000 are scientific and technical personnel. Expenditures on scientific research, other than in the social sciences, for the years ended Mar. 31, 1967 and 1970 were:

	1966-67	1969-70
	\$'000	\$'000
Engineering and technology.....	7,204	15,000
Natural Sciences—		
Agricultural sciences.....	—	50

Solid earth sciences.....	25,757	40,000
TOTALS.....	56,567	93,975

The research activities of the Mines Branch are described in a special article entitled "Federal Research Advances Canadian Mineral Development", appearing in Chapter XIV on Mines and Minerals. The salient features of other research groups of the Department and their accomplishments are outlined in the following paragraphs.

* Extracted from material prepared by Mrs. M. J. Giroux, Public Relations and Information Services, Department of Energy, Mines and Resources, Ottawa.

The *Geological Survey of Canada* has the function of providing a systematic knowledge of the geological history of the country and of collecting, analysing and interpreting data to assist industries and government agencies concerned with Canada's renewable and non-renewable resources, with land use, or with engineering projects where ground stability is a concern. Continuing research projects, especially those involving a major component of laboratory work, have given rise to the establishment of teams with unique capabilities in such areas as mass-spectroscopy and isotope dating, including the development of instrumentation and continuing refinement of techniques in support of field research; biogeochemistry, involving geology, geochemistry and botany; clay mineralogy; and various geophysical projects, especially those involved in the development of remote sensing devices. Research tools and systems that have been developed include: high resolution aeromagnetic survey systems; ground gamma-ray spectrometry; development of airborne gamma-ray spectrometry for the search for radioactive minerals; practical methods of field geochemistry for prospecting; field methods for detection of Radon-222 in streams and sediments to outline uranium-bearing areas; and 'glaciofocus', a method of tracing mineral trains in glacial deposits back to source as an aid to prospecting. In addition, the Geological Survey has led the world in rapid reconnaissance geological mapping using helicopters and other aircraft, especially those involved in the field techniques developed and applied to the mapping of the arctic regions.

The services of the *Surveys and Mapping Branch* are described at pp. 23-25. Two research teams were developed during the 1960s, one to improve the efficiency of topographic mapping and photogrammetry and the other for research in geodesy and to improve the efficiency of methods used to conduct and analyse geodetic surveys. Both teams are unique in that they work in close collaboration with groups actively engaged in mapping operations, as distinct from other researchers who are concerned with particular aspects or basic problems in these fields.

The function of the *Earth Physics Branch* is to investigate the magnetic, gravity and seismic characteristics of the earth as a whole and of the Canadian land mass in particular. The Branch utilizes the results of its research and of the research done elsewhere to obtain new and more detailed knowledge of the Canadian land mass, leading to improved magnetic and gravity charts, improved knowledge of earthquake hazards and improved detection of underground nuclear explosions. Some major programs are: studies on the properties and characteristics of the earth's crust and deep interior; study of the magnetic field in Canada and its variations, both to aid navigation and to investigate the ancient history of the earth; study of variations in the gravitational field in Canada, relating this to the shape of the earth, and to problems in accurate surveying. The Branch is concerned with the recovery of meteorites and investigation of meteorite craters. Branch scientists conducted the world's first systematic search for ancient meteorite craters using air photographs, maps and other information. Sixteen impact sites have been identified in Canada and a greater number of possible sites are under investigation. These investigations have been distinguished by the broad approach taken to the problems of crater identification and analysis; gravity, magnetic, seismic, resistivity, structural, topographic and petrographic methods have all been employed; even more important has been the pioneering use of continuous diamond drilling to investigate the deep zones of a number of craters.

The knowledge so gained has application to the nature, origin and abundance of meteorites and to the history of the more stable parts of the earth's crust. The analysis of field and laboratory observations, coupled with pertinent experiments, has led to a better understanding of the dynamic properties of the earth's crust and the nature of its response to high-energy shock pulses. These results have application to the field of rock mechanics and to the contemplated use of nuclear explosions for large excavations and are of significance to the mining and oil and gas industries because large impact structures have sometimes formed or controlled the distribution of deposits of economic importance.

The *Polar Continental Shelf Project* has been undertaken to increase the scientific and technical knowledge about the arctic regions of Canada. It provides the means for inte-

grating or co-ordinating arctic investigations and, by developing specialized knowledge and experience in technology, logistics, communication and human problems and making such facilities and knowledge available to responsible organizations, it promotes effective scientific and technical work in the arctic regions. The project works directly with other Branches of the Department in planning and carrying out an integrated program of arctic research and survey; it conducts independent investigations to obtain information of basic importance about arctic phenomena, resources or conditions; and it co-operates with other government departments and agencies and with universities to provide expertise and facilities for arctic studies. Major programs, most of which are undertaken in co-operation with other departmental branches or agencies, include: aeromagnetic surveys of arctic regions and preparation of aeromagnetic maps; geodetic and topographic surveys of arctic regions to improve surveying techniques and knowledge of glaciology; investigation of marine geology of the arctic continental shelf and continental slope; investigation of terrestrial geology of arctic regions; hydrographic survey of the arctic continental shelf and slope; and oceanographic survey of arctic waters near the continent.

The *Marine Sciences Branch* carries out hydrographic and oceanographic surveys and studies to meet the national requirements for nautical charts; surveys of marine resources on the continental shelf and in adjacent oceans; oceanographic studies of water properties, marine pollution, currents, waves and related phenomena in the interest of fisheries, transportation, coastal engineering and defence; and research in wave theory, diffusion, large-scale circulation patterns, time and space variability, and related marine phenomena, the understanding of which is essential for effective use of the oceanic resources and the marine environment.

The Branch operates the Atlantic Oceanographic Laboratory, part of the Bedford Institute. This Institute, which it shares with the Fisheries Research Board, is recognized as one of the finest oceanographic facilities in existence anywhere. It has an excellent location on Bedford Basin at the inner end of Halifax Harbour, outstanding waterfront and wharves, a first-class fleet of six major vessels and a larger number of minor craft and launches, excellent equipment and a competent staff. *CSS Hudson*, commissioned in 1963, is one of the largest and best-equipped research ships in the western world. It has ice-breaker configuration, a cruising range of 15,000 miles and the capability to work on any ocean of the world; in 1970 it circumnavigated the Americas. The staff of the Institute has developed special expertise in a number of fields. The work of the Marine Geophysics team, which includes seaborne gravimetry and continuous automatic data processing, is outstanding; a second team has developed competence in the art of measuring currents by moored current meters; a third team has developed a unique system for measuring some of the exchanges between the ocean and atmosphere, which are basic in the processes of weather formation and the development of waves and ocean circulation; and a fourth team has made important advances in describing and explaining the circulation of water in the northwestern Atlantic Ocean and the exchanges of water between the Atlantic and Arctic basins.

The *Inland Waters Branch* investigates and describes the inland water resources of Canada and determines, from the viewpoint of science and engineering, how these resources may best be utilized for the benefit of the people and the industries of the country. Team effort in the Branch takes many forms. For example, the Water Survey of Canada depends on a team of hydrometric experts to deal with streamflow measurements at 2,000 gauging stations throughout Canada. Technical and engineering support staffs deal with special investigations on river-sediment transport and discharge measurements under ice. In the field of water pollution, scientists and engineers of the Water Quality Division, the Hydrologic Sciences Division and the Great Lakes Division apply many skills and disciplines to deal with major problems. The Canada Centre for Inland Waters, located at Burlington, Ont., has an inter-disciplinary program of scientific research and data collection on the Great Lakes. This centre is rapidly becoming one of the major scientific centres for limnological research in North America.

Subsection 5.—Scientific Activities of the Department of Indian Affairs and Northern Development*

The Department of Indian Affairs and Northern Development has statutory responsibility for fostering, through scientific investigation and technology, knowledge of the Canadian North and of the means of dealing with conditions related to its further development. The Department has several methods of carrying out this responsibility. Financial support, through grants, is given to university groups, expeditions and northern institutes to enable them to send research workers into the northern areas of Canada. The main object of this program is to increase the supply of research scientists with northern experience and interests. Grants are also given to agencies to allow them to work on specific problems of northern significance.

The Department has facilities for research in the North. It operates a permanent research laboratory at Inuvik, N.W.T., which has year-round facilities accommodating scientists from government, industry and universities and are specially designed for arctic research. The laboratory serves as a base for extensive field studies conducted in a number of small field stations in the Western Arctic. In addition, a small research laboratory is being established at Igloodik in the Eastern Arctic. Initially it will be used by scientists involved in the human adaptability studies in connection with the International Biological Program but later will become available for other scientific work.

The Department provides advice and information to scientists on work that has been or is being carried out in Northern Canada in their own and in related fields, on transportation and working conditions in the North and on associated matters. It supports the *Arctic Bibliography* produced by the Arctic Institute of North America, which provides a means of information retrieval on northern scientific matters, and encourages scientific conferences on specialized aspects of northern research.

The Department also carries out research related to its own operational responsibilities, including the Canadian Wildlife Service (p. 55), Eskimo and Indian affairs, development of northern resources, and the National and Historic Parks. Much of this research lies in the field of social anthropology and is directed to the effects of rapid change on the native peoples of Canada and the resulting implications for education, welfare and other services. Notable in this context is the Mackenzie Delta Research Project, a multi-disciplinary study in depth of a comparatively restricted area.

Subsection 6.—Scientific Activities of the Canadian Meteorological Service†

Meteorology, the science of the atmosphere, affects all parts of the economy and all areas of the country. It is basic to resource management in primary endeavours such as agriculture, forestry, mining, fishing, water and air (pollution), as well as to manufacturing, construction, transportation, power, etc., and the advancement of knowledge in this discipline, which ranges from the development of new techniques to improve routine weather forecasts to research of the upper atmosphere, is therefore of great value in almost every area of human activity. One of the characteristics of meteorological research is that the information and understanding obtained is seldom very far removed from having economic significance, often of great importance. Almost all research can be readily related to anticipated practical benefits.

Capital, operating and maintenance funds for research and development allotted to the Meteorological Service for the year ended Mar. 31, 1969, amounted to \$2,800,000. In addition, assistance in the form of grants and contracts in the field of meteorology carried out by Canadian universities amounted to about \$300,000.

* Prepared by G. W. Rowley, Scientific Adviser, Department of Indian Affairs and Northern Development, Ottawa.

† The organization and functions of the Canadian Meteorological Service are described at pp. 30-34.

Climatology Activities.—The Meteorological Service conducts research on the applications of meteorology and climatology to water resources, agriculture, forestry, transportation, communications, industry, construction, air pollution control and aviation. In the field of *hydrometeorology*, which involves that portion of the hydrologic cycle which is affected by or which affects the atmosphere, the main processes of interest are precipitation, energy exchange and evaporation. Specialized studies are carried out on storms, the meteorology of lakes and rivers, and the energy balance and water balance of the natural environment. Many of these are of a co-operative, inter-disciplinary and inter-agency nature, some in connection with international research programs and others in relation to flood and water supply forecasting.

Climatic research in support of natural resources, Arctic exploration and development, industry and commerce is conducted within the Service itself, by the assignment of personnel to other agencies, through co-operative research, or through research contracts; bioclimatological research relating to productivity of forests is carried out co-operatively and in this field a newly designed lysimeter is under construction to be used in studies of evapotranspiration from crops, the air-earth crop water balance and the evaluation of evaporation instruments; arctic studies are made in support of oil and mineral exploration, the selection of airport, town and mining sites, the design and operation of communication systems, transportation and operations in severe cold weather; topoclimatological research, using mobile and stationary sensors, is a basis for optimum land use in fruit production and town planning; engineering studies are undertaken in support of the construction industry and analyses are used in the national building code; and an ice accretion climatology is being developed to aid in the design of support towers.

Atmospheric Research.—Great progress has been made in theoretical meteorology using the basic dynamic and thermo-dynamic equations in conjunction with very large computers. Topics studied include: energetics of atmospheric circulations; modes of development in extra-tropical cyclones; influence of moisture exchanges on the synoptic circulation; and new physical and mathematical models for studying and forecasting circulation patterns.

Studies of atmospheric processes on a scale from a few inches to about a mile (micro-meteorology) are of importance in a number of fields including air pollution, agriculture, forestry, urban planning, etc. Study topics include: wind and turbulence in the surface boundary layer; turbulent flux of heat, momentum and particulate matter; variability of momentum flux in the earth's boundary layer; effects of turbulence on coherent and incoherent light propagation in the atmosphere; and temperature and humidity micro-structure at a land-lake interface.

Studies of atmospheric motions ranging from about one mile horizontally up to about 100 miles (mesometeorology) are of great importance in local weather variability and are of basic importance for aviation terminal forecasting, air pollution control, etc. Studies include: mesonetworks for aviation terminal forecasting; meso-scale circulations as related to local terrain including lake breezes, valley winds, gravity waves, etc.; and energy and momentum exchanges between meso-scale and large-scale circulations.

Studies on cloud and precipitation processes in the atmosphere may have very great economic consequences, partly because it may be feasible to modify and to a certain extent control these processes. Problems being investigated include: mechanisms of rain, cloud and hail formation and methods to modify these mechanisms; cloud-seeding trials and their evaluations; dispersal of fog at airports; condensation nuclei and ice-crystal formation; use of radar to study and measure cloud and rain; detection and tracking of lightning and lightning storms for forest-fire control; and measurement of electrical fields including conductivity and ion current density and their relationship with other meteorological parameters.

The study of radiation, both solar and terrestrial, is of fundamental importance in respect to atmospheric energetics and information on radiation is of immense value in many

human activities. Research programs include: basic properties of radiation instrumentation, their design and standardization by international intercomparisons; development and use of radiometersondes for measuring radiational variations with height; use of radiation data for a number of applications including atmospheric dynamics, agriculture, construction, etc.

The atmosphere above 30 km. contains only about 1 p.c. of the earth's atmosphere but the nature and extent of the interaction, both physical and dynamical, between this region and the underlying atmosphere requires examination. The coupling mechanisms, through circulation and radiative processes, require study both from the viewpoint of downward energy propagation and climatic modification, and upward in relation to radio communications and flight through these regions. Studies include: the measurement of ozone in the atmosphere both from ground-base systems and by use of ozonesondes; analysis of ozone data and radio-active tracers to establish circulation patterns; development and operation of a noctilucent cloud observational network; development and operation of air-glow stations; and development of meteor-trail Doppler radar techniques for use in measuring winds in the 80-110-km. range.

Instrument Research.—The Meteorological Service uses a large number of instruments in its operational surface and upper-level observing networks, including those that are purchased or developed for specific research programs. Of particular note are the automatic weather observing stations that measure a variety of standard or special weather parameters, encode the measurements and transmit them in digital form by teletype or radio telemetry circuits, which have been developed primarily to obtain real-time data from locations at which it would not be possible or economical to establish manned observatories; these stations also provide highly objective, error-free measurements.

Climatological data recorders have been developed to extend the network of stations that delineate in detail the most important climatic parameters—temperature, precipitation, wind humidity and evaporation; there is an increasing need for long-duration recorders, suited to the Canadian climate, to extend this network into remote northern areas.

Always highly respondent to the aviation needs for meteorological data, the Service has developed and improved instruments for measuring temperature, humidity, wind, visibility, cloud height, and altimeter setting at major airports. Efforts are directed toward the development of instruments that make more accurate and more representative measurements, and also toward the effective distribution and display of these data to aircraft operators and controllers.

The extensive measurement and data-recording requirements of Service research programs in mesometeorology and micrometeorology and in hydrometeorology and bioclimatology have required the development of various sensor, data-processing and data-recording systems. Among these are a lower-troposphere microsonde for measuring the fine structure of temperature and humidity in the lower 2,000 feet of the atmosphere, and a multi-element forest bioclimatology station.

The Service has greatly extended the range, force and accuracy of its measurement of winds in the upper atmosphere to 100,000 feet above the surface, primarily by the procurement and installation of a new generation of radiosonde ground equipment. This expanded capability has been enhanced by the development of minor improvements in tracking and recording equipment, operating techniques and computing methods. Development is also under way of equipment for use in conjunction with meteorological rocket firings which will be compatible with the standard radiotheodolite and meteorological data-recording system at present in use.

Various studies are carried out to improve procedures and methodology in a number of Meteorological Branch activities, including studies to optimize data archiving, computer use, meteorological communications, weather dissemination, etc.

Section 3.—Scientific Research Supported by Provincial Governments

Subsection 1.—Provincial Organizations

Six of Canada's provincial governments (Nova Scotia, New Brunswick, Quebec, Manitoba, Saskatchewan and Alberta) have established research councils or foundations and two others (Ontario and British Columbia) have assisted financially in the setting up of such organizations. Most provincial governments have university laboratories to consult, particularly about local industrial and agricultural problems, and many individual departments have facilities for research in their particular fields of endeavour or assist research through the provision of financial aid to students working in those and other scientific fields. Agriculture is particularly well covered because of its importance as an export industry but the provinces are also intensely interested in their other natural resources. Their efforts in the fields of agriculture, forestry, mining and fisheries are outlined in the Chapters dealing with those subjects (see Index).

Nova Scotia Research Foundation.—This body was created by the Government of Nova Scotia in 1946 to provide industry and government with scientific and technical assistance in finding new and better ways to utilize the resources of the forest, the sea, the farm, the mine and the process industries. To this end, it seeks to correlate and further scientific and technical work on local problems and available resources. A new \$1,500,000 laboratory building, financed by an Atlantic Development Board grant and occupying a commanding 10-acre site in Dartmouth, was completed in 1969. The present staff of 76 includes 51 scientists and technicians. It is governed by a board made up of scientists and industrialists.

The Technical Services Division provides technical information on materials, equipment and processes and gives industrial engineering assistance to manufacturing industries. The various sections include technical information, industrial engineering, new product development, an information centre and an extensive aerial photo-library. The Operational Research Division provides a service for industry and government. Utilizing the mathematical techniques of systems analysis, the Division undertakes projects in the area of optimal resource allocation, production scheduling and distribution. The Chemistry Division carries out water, mineral and foliar analysis as well as pilot plant studies on chemical processes. One of its main tasks is to develop new commercial processes and products which utilize the existing minerals and other natural resources of the province. The Engineering Physics Division makes available developments in applied physics to Nova Scotia industry. Emphasis is at present placed on research and development in electronic and mechanical engineering and in non-destructive testing. The Geophysics Division carries out gravity, seismic, magnetic, well-logging and electromagnetic surveys for industry and for government, and also sponsors a program of research on the surficial geology of Nova Scotia. The Applied Biology Division has been carrying out field and laboratory studies on the ecology, distribution, growth, harvesting techniques, conservation and cultivation of commercial algae in the Atlantic area. The Library is well stocked with scientific and technical information to aid the Research Foundation staff, industry and government.

A *Research Foundation Bulletin*, issued occasionally, keeps industry advised of Foundation activities and of important discoveries in science and technology. The *Research Record* gives a descriptive account of past research projects.

New Brunswick Research and Productivity Council.—This Council, with financial support from the New Brunswick Government and in specific areas from federal sources, provides an international management consulting service to governments, banking institutions and private industry and undertakes consultation and contract work on a repayment basis from industry. It has 65,000 sq. feet of laboratory space and employs a staff of more than 50 persons. The Council specializes in management consulting, engineering

and technical information services, conducts training courses in management techniques and carries on applied research in the fields of mechanical and control engineering, food technology, microbiology and mineral technology. Policies are established by 13 Council members representative of provincial industry, labour, government and education, with the help of specialist advisory committees. The Executive Director has supervision over and direction of the work of the staff and has charge of all matters relating to the administration of the affairs of the Council. The Chairman of the Council reports annually to the Premier of the province.

Quebec Industrial Research Institute.—The Quebec Industrial Research Institute was set up under the terms of an Act of the National Assembly (SQ 1969, c. 62), given Royal Assent on Dec. 12, 1969. The Institute is made up of 15 members named by the provincial government after consultation with representatives of major scientific and industrial organizations. Its functions include research in applied science carried out either in its own laboratories or in those of other research organizations, development of product processes and apparatus of an industrial or scientific nature, and collection and dissemination of technological and industrial information. The Institute is an independent organization financed by provincial grants amounting to \$4,000,000 annually for the five years 1970-74. Its laboratories are to be located within the science complex being constructed at Ste. Foy, a suburb of Quebec City, where eventually all Quebec government research laboratories will be grouped. This complex will also house the pilot plant for mineral research which will contain sampling and treatment facilities and in which, in addition to carrying out assay services, research will be conducted into the most efficient methods of recording and treating ores. The Institute is currently located at 710 Youville Square, Quebec City, with the offices of the Minister of Industry and Commerce, through whom it reports to the National Assembly.

Ontario Research Foundation.—The Ontario Research Foundation, established in 1928, is an independent corporation. It derives its powers from a special Act of the Ontario Legislature and is responsible to a Board of Governors consisting of leading members of the industrial, commercial and scientific communities who are appointed by the Lieutenant-Governor in Council. The organization was financed initially by an endowment fund, provided by industrial and commercial corporations through the Canadian Manufacturers' Association, and an equal block grant from the provincial government. Most of its current income is derived from contract research undertaken mainly for industry. In recent years the Ontario Government has provided a direct annual grant to ORF, the amount of which is directly proportional to ORF's income from industry.

The Foundation is concerned primarily with the development of Canadian industry through the application of science and technology. Also, through the various departments of the Ontario Government, it undertakes work relative to the natural resources of the province. Foundation activities are not restricted to the province; work is undertaken for any organization in Canada on the same basis.

The Foundation contributes to the industrial economy and to the general welfare by: (1) undertaking industrial research and development for companies as requested; (2) undertaking research and development for governmental agencies as requested, particularly with respect to natural resources and to defence; (3) providing and maintaining an effective and efficient applied research and development facility for the use of industry and government agencies, using funds provided by the Ontario Government to support the back-up research necessary for this purpose; and (4) bringing to the attention of industry and governmental agencies research opportunities that promise economic or social benefits.

Situated in the Sheridan Park Research Community, 17 miles west of Toronto, and serving as the nucleus of that scientific centre, ORF provides the most modern facilities and equipment for scientific and technological investigations. Its staff of approximately 250 scientists, engineers, technicians, and service personnel has diversified academic

training and industrial experience and is so organized that these specialized talents can be applied to individual research and development projects. In effect, the staff of ORF constitutes a reservoir of scientific and technical abilities from which industrial or governmental sponsors can draw at will.

Since its establishment, ORF has provided numerous companies—from the very small to the very large—with research and development services. These have ranged from short-term investigations and feasibility studies, through product and process development, to long-range fundamental scientific investigations. All research and development projects are conducted on a confidential basis—this includes all business, technical or proprietary information revealed to ORF by clients or prospective clients. Patents resulting from research and development studies are assigned to the client.

Manitoba Research Council.—The Manitoba Research Council consists of seven members representing natural-resource-based industry, manufacturing, the University of Manitoba and labour. Its work is financed by provincial government appropriations, although fees and service charges may be levied for its services. The objectives of the Council are to promote or carry on, or cause to be promoted or carried on, research and scientific inquiries respecting agriculture, other natural resources, industry or other segments of the economy of the province and to help secure for Manitoba the benefits of research and scientific inquiries carried on elsewhere. The preponderance of small industrial establishments in Manitoba and their need for assistance in developing a more scientifically based production capability to improve their competitive position in domestic and world markets was the major reason for the establishment of the Council. At present it maintains an office in the Provincial Government Administration Building (Norquay Building) in Winnipeg.

Saskatchewan Research Council.—This Council was set up in 1947 under an Act of the Government of Saskatchewan. The Council carries out research in the physical sciences with the aim of improving the provincial economy. It is therefore particularly concerned with the commercial exploitation of provincial resources and the scientific aspects of business. At first the Council had no scientific personnel and laboratory facilities of its own. Its research program was carried on at the University of Saskatchewan and was promoted by means of grants to members of the staff and scholarships to graduate students. The 1947 Act was amended in 1954 to empower the Council to acquire property, employ staff and conduct its own financial affairs. Laboratory buildings were erected on the university campus in 1957 and were extended in 1963. In the present program of research the emphasis is on water and mineral resources, fields of agriculture not covered by other organizations, and technical assistance to industry. A large part of the program is carried out by the permanent staff, numbering about 60, but some of the Council's research is still promoted by grants to university staff. The members of the controlling body, the Council proper, are appointed by the Lieutenant-Governor in Council and consist of representatives of the government, the university and industry.

Research Council of Alberta.—The Province of Alberta set up a scientific and industrial Research Council in co-operation with the University of Alberta in 1921, the promotion of mineral development within the province being the chief purpose leading to its establishment. The present program is directed mainly toward the development of the natural resources of the province and toward the establishment of new industries within the province. The principal areas of activity are fossil fuels development and utilization, geological surveys and research, groundwater, soils, industrial minerals, chemical product and process development, microbiology, technical assistance to industry, gasoline and oil testing, pipeline transportation, highway research, river engineering, and hail research.

The operations of the organization are controlled by a Council of 10 individuals representative of Alberta Government, universities and industry. The various research fields are reviewed by advisory committees of specialists drawn from industry, the uni-

versities and the provincial government. The programs of the Research Council of Alberta are financed principally by provincial government appropriations, although an increasing amount of income is derived from contract research.

The main Council laboratories and offices are located on the University of Alberta campus in Edmonton. A pilot plant and laboratory facility is located in the Clover Bar area east of the city. The full-time staff comprises approximately 200 scientists, engineers, technologists and supporting personnel.

B.C. Research.—B.C. Research is the technical operation of a non-profit, industrial research society—the British Columbia Research Council—with offices and laboratories at 3650 Wesbrook Crescent, Vancouver 8, B.C. Its function is to enable even the smallest firms to improve their competitive position in Canadian and world markets by the use of the most up-to-date scientific knowledge. B.C. Research carries out contract research for clients on a confidential basis, initiates “in-house” research programs designed to promote and utilize the resources of the province, and provides a free technical information service in collaboration with the National Research Council. B.C. Research is active in the areas of applied biology, chemistry, engineering, physics, operations research, industrial engineering, industrial market studies and economic feasibility studies.

Subsection 2.—Expenditures by Provincial Organizations on Scientific Activities

As stated in Subsection 1, eight provinces have established research councils or foundations, each having the primary role of assisting firms with technical problems and of aiding with the development of provincial natural resources. Table 5 shows the approximate expenditures of these establishments as reported in the latest DBS biennial survey of expenditures on industrial research and development in Canada. There seem to be two main differences between the pattern shown for these provincial establishments and that shown for industrial research and development expenditures as a whole—the first is that wages and salaries seem to account for a larger portion of current intramural costs and the second is the relative unimportance of extramural payments.

5.—Expenditures on Research and Development by Provincial Research Councils and Foundations, 1965-70

Type	1965	1966	1967	1968	1969	1970 ¹
	\$'000,000	\$'000,000	\$'000,000	\$'000,000	\$'000,000	\$'000,000
Intramural Expenditures	9.9	13.0	13.5	14.6	16.6	13.9

Totals, Expenditures	10.0	13.1	13.6	14.7	16.8	14.1

¹ Forecast by respondents.

As shown in Table 6, provincial governments are by far the most important source of funds, although some councils or foundations rely on them more than others. Payments for research and development contracts from Canadian industry are the second largest source of revenue, the Federal Government providing most of the remaining funds. The contribution of the Federal Government in 1969 was especially important as a source of the capital funds required by the councils and foundations. Table 7 shows that total personnel employed by these establishments increased 21 p.c. from 1965 to 1969.

Section 4.—University Research*

The traditional role of universities, which is to generate, organize and transmit knowledge, makes essential their involvement in the performance of research and the kind of research they conduct is conditioned to a large extent by their special needs and responsibilities. Because it is important that faculty members remain at the forefront of knowledge in their discipline and at the same time retain the breadth required to organize and transmit new knowledge effectively, they have traditionally favoured basic research as the vehicle for the achievement of these objectives. The result has been that universities have become the principle performers of basic research in Canada. It is estimated that 70 p.c. of all research performed in the universities is in the category of basic research and this relatively high proportion is to some extent a reflection of the mechanisms by which Canadian university research is funded.

In Canada more than half of the total funds for sponsored, assisted and contract research comes from three agencies of the Federal Government—the National Research Council, the Medical Research Council and the Canada Council—whose purpose for supporting research is the healthy and balanced development of knowledge in Canadian universities rather than the support of a particular mission of their own. The university research support programs of these three agencies are broadly similar in the sense that they all award grants in response to initiatives from the universities and their criteria for support are based mainly on the merits of the individual researcher and the excellence of the project. The probable utility of the knowledge sought is generally not given high priority in assessing a project. These funding policies have favoured the development of basic research of a high calibre in Canadian universities.

The National Research Council has the responsibility for supporting research in the natural sciences and in engineering. It is the largest sponsor of research in Canada, having

* Prepared by Dr. P. Bourgault of the Science Council of Canada staff.

awarded \$45,800,000 in grants and scholarships in the academic year 1967-68, \$59,000,000 in 1968-69 and an estimated \$65,000,000 in 1969-70. The Medical Research Council (MRC), under its new Act passed in 1969, assumes the responsibility for research support in all the disciplines in the health sciences. This represents an extension of its terms of reference which previously had encompassed only medical research. In 1967-68, MRC's total research support amounted to \$20,500,000; in 1968-69 it rose to \$27,000,000 and is expected to reach \$31,000,000 for the academic year 1969-70. Research support for the humanities and the social sciences is the responsibility of the Canada Council. In 1967-68, the Council distributed \$11,500,000 in grants, fellowships and miscellaneous awards to researchers in the academic community; this increased to \$16,500,000 in 1968-69 and to an estimated \$19,300,000 in 1969-70. Other federal departments making large contributions to university research in the form of grants, scholarships or contracts in 1967-68 were National Health and Welfare (\$5,600,000), Atomic Energy Control Board (\$2,500,000), and Defence Research Board (\$2,900,000). Federal departments making smaller contributions added a further sum of about \$7,000,000. In addition to these amounts from federal sources, universities were the recipients of \$15,000,000 in direct support for assisted research from the provinces, \$2,800,000 from business and industry, \$8,300,000 from foundations and associations, and about \$8,000,000 from miscellaneous other sources. This direct support for sponsored, assisted and contract research, substantial though it may be, covers by no means all of the costs of research performed in universities. In general, it corresponds approximately to the "direct" costs of research which include such items as equipment, supplies, salaries of technicians and the support of graduate students; it does not cover the "indirect" costs which are taken here to include the salaries of academics, plant maintenance, general administration, etc. These indirect costs are difficult to assess accurately but they are generally conceded to exceed the direct costs (according to some estimates, by as much as a factor of two*). Since they appear as part of the operating expenses of universities, indirect costs are borne by the provinces who in turn pass on a portion of them to the Federal Government through the mechanism of the fiscal transfer arrangements on post-secondary education.

The number of full-time university teachers in Canada for the academic year 1968-69 was estimated to be 23,500 most of whom were engaged in some research activity. There were 26,120 full-time graduate students enrolled in the same year, of whom 6,600 were in faculties of pure science and 3,023 in faculties of applied science and engineering.

The almost explosive growth that occurred in university research during most of the 1960s appears to be moderating as the 1970s begin. This is particularly noticeable in the physical sciences and engineering, where some degree of maturity has been achieved in Canadian universities and where future growth may be expected to continue at a more normal rate. The humanities and social sciences, being relatively less well developed, may be expected to have a few additional years of very rapid growth. Some noticeable trends have occurred in recent years in Canadian university research that may be expected to continue and perhaps to accentuate in the years immediately ahead. Foremost among these is the move to break down the rigid barriers that have existed between disciplines on university campuses. We are witnessing, with increasing frequency, the undertaking of projects and the establishment of research institutes that depend on the co-operative initiative of two or more departments, faculties or even universities. Another relatively recent trend has been toward a greater degree of specialization on the part of universities. Special grants (Negotiated Development Grants), made available by the National Research Council and by the Medical Research Council, give positive inducements to universities to follow this policy of specialization. Recent recommendations by the Science Council have advocated relatively more support for university research from the mission-oriented departments, with the National Research Council, the Medical Research Council and the Canada Council assuming more of a balancing role and ensuring that no legitimate discipline is neglected.

* John B. Macdonald et al, *The Role of the Federal Government in Support of Research in Canadian Universities*. Ottawa, Information Canada, 1969.

Section 5.—Industrial Research

Subsection 1.—Industrial Research and Development Activities

Canadian firms are becoming increasingly involved in research and development activities, particularly those associated with fabrication and end-product manufacture. The need to develop new or improved products to serve expanding domestic and foreign markets, to meet competition from other Canadian and foreign firms and to exploit efficiently the country's natural resources has required industry to form and expand competent research and development units. In the present decade, capital and operating expenditures for industrial research and development (R and D), encouraged by the growth in markets, production facilities, financial resources and supplies of technically skilled manpower, have increased rapidly, as shown in the chart on p. 466, accompanied by a growth in the professional and supporting personnel of about 10 p.c. per annum; capital expenditures have increased considerably since 1961.

The Federal Government recognizes the need for a strong research and development effort in Canada and has inaugurated several programs of direct assistance. The Department of Industry, Trade and Commerce administers the Defence Industry Productivity Program and the Programme for the Advancement of Industrial Technology. The National Research Council and the Defence Research Board make grants in support of industrial research projects. In addition, the Industrial Research and Development Incentives Act (IRDIA) authorizes the Department of Industry, Trade and Commerce to make substantial grants to firms expanding their research and development programs.

The Programme for the Advancement of Industrial Technology, which was established in 1965 as the civil counterpart of the Defence Industry Productivity Program, is of particular interest because of its innovative slant and selective nature. Its basic aim is to help Canadian secondary industry upgrade its technology and expand its innovative activity by underwriting the technical and market risks of specific product or process development projects which involve a significant advance in technology and which, if successful, offer good prospects for commercial exploitation in domestic and foreign markets. Priority goes to projects which increase productivity or otherwise contribute directly to attain a unique capability or technical leadership, taking advantage, where possible, of Canada's natural resources and skills.

In recent years the total direct federal support for industrial research and development (incentive schemes and contracts) has been as follows:*

<u>Year</u>	<u>Amount</u>
	\$'000,000
1965-66.....	65.6
1966-67.....	58.9
1967-68.....	60.7
1968-69 (projected).....	79.9
1969-70 (estimated).....	102.9

Employment Related to Research and Development Activities.—The level of employment of scientists and engineers in the various areas of industrial research and development gives a measure of the corresponding activity. The first 10 industries rank as follows (1967):—

<u>Rank</u>	<u>Industry</u>	<u>Scientists and Engineers in R and D</u>	<u>Percentage of Total</u>
		No.	
1	Electrical products.....	2,021	27.0
2	Chemical products (other than drugs and medicines)....	1,059	14.2
3	Aircraft and parts.....	741	9.9
4	Paper.....	488	6.5
5	Primary metals (non-ferrous).....	399	5.3
6	Drugs and medicines.....	362	4.8
7	Scientific and professional instruments.....	333	4.5
8	Petroleum products.....	303	4.1
9	Machinery.....	273	3.6
10	Food and beverages.....	247	3.3
	Other industries.....	1,241	16.8
	ALL INDUSTRIES.....	7,467	100.0

* Science Council of Canada; Third Annual Report 1968-69, p. 9.

The above 10 industries absorb some 83 p.c. of the scientists and engineers employed in research and development and represent more than half the sales volume of Canadian industry in 1967. The first three industries alone employ more than 50 p.c. of R and D personnel in Canada, and account for over 50 p.c. of all current intramural expenditures on R and D. About 20 p.c. of the scientists and engineers in industry have advanced degrees; equally divided between master of science and doctorate degrees, at about 13 p.c. each.

One possible method of identifying research-intensive industries is to compare the number of scientists and engineers involved in R and D with the total number of persons employed by the industry. Based on this criterion, the 10 leading industries are as follows (1967):—

<i>Rank</i>	<i>Industry</i>	<i>R and D Scientists and Engineers per 1,000 Employees</i>
1	Drugs and medicines.....	46.4
2	Scientific and professional instruments.....	39.6
3	Non-manufacturing industries (other than transportation and other utilities).....	29.6
4	Aircraft and parts.....	23.2
5	Electrical products.....	20.7
6	Chemical products (other than drugs and medicines).....	18.2
7	Gas and oil wells.....	17.8
8	Rubber.....	10.9
9	Petroleum products.....	10.1
10	Primary metals (non-ferrous).....	8.2

For all industries reporting, there were 7.7 scientists and engineers per 1,000 employees. The above industries accounted for about one third of total industry sales of some \$27,000,000,000 in 1967.

Laying an anti-pollution cable beside a pipeline during installation of suburban domestic services. Several years of research by a private company resulted in the development of a wire-insulating material that immediately begins to dissolve from any underground leak, no matter how small, short-circuiting the cable and pinpointing the position of the leak before any great damage is done.

Subsection 2.—Industrial Research and Development Expenditures

The latest biennial DBS survey of expenditures on industrial research and development in Canada was carried out in 1968 and gives figures for the period 1965-68. Results appear in DBS publication *Industrial Research and Development Expenditures in Canada, 1967*, and are summarized in this Subsection.

Spending on scientific research and development by Canadian industry almost doubled during the period 1963-68, increasing from \$211,700,000 to \$385,300,000. Intramural expenditures moved steadily upward during the period from \$153,200,000 to \$302,500,000, while capital expenditures reached a peak in 1966 at \$50,700,000 and then declined to \$44,100,000 in 1968. This decline might be attributed to the high cost of borrowed money in 1967 and 1968 as well as to the fact that research installations on which expenditures had been heavy in preceding years were completed. The size of extramural research and development payments made abroad by Canadian companies did not increase very much between 1963 and 1968, but in 1967 companies reported spending abroad about twice as much money as they received for research purposes from other countries.

8.—Total Industrial Research and Development Expenditures, 1963-68

Item	1963	1964	1965	1966	1967	1968 ¹
	\$'000,000	\$'000,000	\$'000,000	\$'000,000	\$'000,000	\$'000,000

Equipment.....	17.1	31.7	34.8	32.3	31.3	33.5
Totals, Capital Expenditures.....	27.7	46.5	50.5	50.7	44.9	44.1
Totals, All Expenditures.....	211.7	271.3	316.6	347.6	375.6	385.3

¹ Forecast by respondents.

² Adjusted by DBS to remove those payments made by one Canadian firm to another, since such payments are covered in the intramural costs.

³ DBS estimate.

Table 9 shows the current intramural research and development expenditures by performing industries. In 1967, three industries—electrical products, aircraft and chemical products—accounted for about 55 p.c. of the total expenditures. Since 1955, the year of the first survey, these industries have spent more for current intramural research and development than all others combined.

9. Current Intramural Research and Development Expenditures, by Industry, 1963-68

¹ Forecast by respondents.

Because of difficulties of interpretation and estimation, the figures shown in Table 10 cannot be more than approximations. However, they do indicate that the applied research and development performed within an industrial group may be for the benefit of some other related industry or for a new 'industry'. Furthermore, company groups may have been assigned to one industry, whereas the activities of the group, including research and development, may actually cover several industries. For example, applied research and development for the aircraft industry was largely for other products—about \$28,500,000 was spent on aircraft, \$2,500,000 on guided missiles and space vehicles, and \$11,800,000 on other transportation equipment.

10.—Current Intramural Applied Research and Development Expenditures, by Product Group, 1967

Table 11 gives sources of funds for total current and capital research and development expenditures. For all Canadian industry, the performing company is by far the most important source of funds, providing over 77 p.c. of such funds in 1967. However, since capital expenditures are not usually financed by governments or other companies supporting a firm's research and development program, the performing company would be a less dominant source of funds for current intramural expenditures—perhaps accounting for about 70 p.c. rather than 77 p.c. Other significant sources are the Federal Government, foreign governments and foreign related companies. Industries and firms do not rely on the same sources to the same extent. For example, about 72 p.c. of the research and development funds for the scientific and professional instruments industry seems to come from outside the performing company; the direct support of the Federal Government goes mainly to two industries—aircraft (40 p.c.) and electrical products (36 p.c.); and funds from foreign sources account for about 50 p.c. of intramural expenditures for the scientific and professional instruments industry.

³ Includes foreign governments.

Section 6.—International Comparisons

A comparison of gross domestic research and development (R and D) expenditures in Organization for Economic Co-operation and Development (OECD) countries is given in Table 12. Within this group of countries, there are wide differences in total resources, in population, in defence commitments, and in industrial, commercial, social and political structure. Comparisons are therefore difficult. Moreover, the criteria used to obtain these statistics may vary from country to country.

12.—Gross Domestic R and D Expenditures in OECD Countries and Current Expenditures by Type of Activity

¹ Total intramural expenditures (France 1963).

In the OECD publication *Reviews of National Science Policy—Canada* (1969), an attempt was made to compare gross domestic R and D expenditures for economic and social purposes by separating expenditures in military research, atomic research and space research from the aggregate figures. As can be seen from Table 13, the results obtained give a completely different picture from that obtained by comparing total R and D expenditures.

Section 1.—Canadian Criminal Law and Procedure†

The system under which justice is administered in a State is never rigid. To have it so would be neither expedient nor indeed possible. A judicial system must grow and adapt itself to the requirements of the people, and the exact limits of the powers of different legislative bodies require continued definition.

The criminal law of Canada has as its foundation the criminal common law of England built up through the ages and consisting first of customs and usages and later expanded by principles enunciated by generations of judges. There is no statutory declaration of the introduction of English criminal law into those parts of Canada that are now the Provinces of New Brunswick, Nova Scotia and Prince Edward Island. Its introduction there depends upon a principle of the common law itself by which English law was declared to be in force in uninhabited territory discovered and planted by British subjects, except in so far as local conditions made it inapplicable. The same may be said of Newfoundland although the colony dealt with the subject in a statute of 1837. In Quebec its reception depends upon a Royal Proclamation of 1763 and the Quebec Act of 1774. In each of the other provinces and in the Yukon and Northwest Territories the matter has been dealt with by statute.

The judicial systems of the provinces as they exist today are based upon the British North America Act of 1867. Sect. 91 of the Act provides that "The exclusive legislative authority of the Parliament of Canada extends to . . . the criminal law, except the constitution of courts of criminal jurisdiction but including the procedure in criminal matters". By Sect. 92 (14), the legislature of the province exclusively may make laws in relation to "the administration of justice in the province, including the constitution, maintenance and

* Except as otherwise credited, this Chapter has been revised in the Judicial Section, Health and Welfare Division, Dominion Bureau of Statistics.

† Revised by the Criminal Law Section, Department of Justice, Ottawa.

organization of provincial courts, both of civil and criminal jurisdiction and including procedure in civil matters in its courts". The Parliament of Canada may, however (Sect. 101), establish any additional courts for the better administration of the laws of Canada. It should be noted that the Statute of Westminster, 1931 effected important changes, particularly by abrogating the Colonial Laws Validity Act, 1865 (Br.) and confirming the right of a dominion to make laws having extraterritorial operation. Particulars of the federal and provincial judiciaries are given in Chapter II, pp. 97-107.

At the time of Confederation each of the colonies affected had its own body of statutes relating to the criminal law. In 1869, in an endeavour to assimilate them into a uniform system applicable throughout Canada, Parliament passed a series of Acts, some of which dealt with offences of special kinds and others with procedure. Most notable of the latter was the Criminal Procedure Act, but other Acts provided for the speedy trial or summary trial of indictable offences, the powers and jurisdiction of justices of the peace in summary conviction matters and otherwise, and the procedure in respect of juvenile offenders.

Codification of the criminal law through a Criminal Code Bill founded on the English draft code of 1878, Stephen's *Digest of Criminal Law*, Burbidge's *Digest of the Canadian Criminal Law*, and the relevant Canadian statutes was brought about by the Minister of Justice, Sir John Thompson, in 1892. This Bill became the Criminal Code of Canada and came into force on July 1, 1893. It must be remembered, however, that the Criminal Code was not exhaustive of the criminal law. It was still necessary to refer to English law in certain matters of procedure and it was still possible to prosecute for offences at common law. Moreover, Parliament has declared offences against certain other Acts, e.g., the Narcotic Control Act, to be criminal offences and the same was done in the Defence of Canada Regulations and the Wartime Prices and Trade Board Regulations (neither now in force) promulgated under the authority of the War Measures Act.

It is often difficult to distinguish between 'law' and 'procedure'. Procedure may be interpreted to relate simply to the organic working of the courts but, in a wider sense, it may also affect the rights or alter the legal relations arising out of any given state of facts. For present purposes it will be useful to note that writers on jurisprudence describe law as being substantive or adjective. "Substantive law is concerned with the ends which the administration of justice seeks; procedural (adjective) law deals with the means and instruments by which these ends are to be obtained."* With reference to the criminal law, the former may be taken to include the provisions concerning criminal responsibility, the definition of 'offences' and the punishment for those offences, and the latter to include provisions for enforcement, e.g., powers to search and to arrest, for the modes of trial and for the proof of facts. Broadly speaking, the Criminal Code observes the distinction although it might appear that the provisions for preventive detention of habitual criminals and dangerous sexual offenders partake of the nature of both classes.

An examination and study of the Criminal Code was authorized by Order in Council dated Feb. 3, 1949, and the Commission assigned the task of revising the Code presented its report with a draft Bill in February 1952. After coming before successive sessions of Parliament it was finally enacted on June 15, 1954 and the new Criminal Code (SC 1953-54, c. 51) came into effect on Apr. 1, 1955. Since the new Code came into force several amendments have been made, for the most part in relation to procedure. Among the most notable of these, as well in point of procedure as of substance, are: an amendment in 1956 providing that motions for leave to appeal to the Supreme Court of Canada in criminal cases should be heard by a quorum (at least five) of judges of that Court instead of by a single judge; amendments effected by SC 1959, c. 41, providing a statutory extension of the definition

* Salmond on *Jurisprudence*, 7th Edition, p. 496.

of "obscenity" and making provision for seizure and condemnation of offending material without a charge necessarily being laid against any person; extensive amendments relating to the allowing of time for payment of fines; amendments dealing with offences committed in aircraft in flight over the high seas; an amendment forbidding the publication in a newspaper or broadcast of a report that any admission or confession was tendered in evidence at a preliminary inquiry or a report of the nature of such admission or confession unless the accused has been discharged or, if the accused has been committed for trial, the trial has ended.

The Parole Act (SC 1958, c. 38), brought into force on Feb. 15, 1959, revises the parole system and provides for the establishment of a National Parole Board (see pp. 529-530).

It is most important to note that in 1960 (SC 1960, c. 44) Parliament enacted what is known as the Canadian Bill of Rights. Although the Act sets out further details, its general scope appears in Sect. 1, which reads as follows:—

"1. It is hereby recognized and declared that in Canada there have existed and shall continue to exist without discrimination by reason of race, national origin, colour, religion or sex, the following human rights and fundamental freedoms, namely,

- (a) the right of the individual to life, liberty, security of the person and enjoyment of property, and the right not to be deprived thereof except by due process of law;
- (b) the right of the individual to equality before the law and the protection of the law;
- (c) freedom of religion;
- (d) freedom of speech;
- (e) freedom of assembly and association; and
- (f) freedom of the press."

Although the Bill of Rights has been invoked on various occasions, the courts have not held it to affect the operation of the Criminal Code.

In 1961 (SC 1960-61, cc. 43-44), the offence of murder was divided into capital and non-capital, the death penalty was abolished in relation to the offence of non-capital murder, and the term *criminal sexual psychopath* was dropped and the term *dangerous sexual offender* substituted; in 1965 (SC 1964-65, c. 53) provision was made for the right to appeal in *habeas corpus* proceedings.

The concept of "non-capital murder" was introduced into Canadian criminal law in 1961. At that time, capital murder was defined to include, for example, planned and deliberate murder, murder in the course of certain violent acts and murder of peace officers and prison officers. Life imprisonment was substituted for the death penalty in cases where the accused was convicted of non-capital murder. In 1966, the House of Commons, on a free vote, rejected a Bill under which the death penalty for murder would have been completely abolished but in 1967 (SC 1967-68, c. 15) an Act was passed under which the definition of capital murder is restricted to the murder of peace officers or prison officers. This Act was brought into force on Dec. 29, 1967, and will continue in force for a period of five years from that day. The Act will then expire unless before the end of the five-year period Parliament by a joint resolution of both Houses directs that it shall continue in force. If the Act is not continued in force before the expiry of the five-year period, the broader definition of capital murder introduced in 1961 will again come into operation. It should be noted that the law contains a provision whereby a person in respect of whom sentence of death has been commuted or a person who has been sentenced to life imprisonment for capital murder shall not be released without the prior approval of the Governor in Council.

The most comprehensive amendments to the Criminal Code since it came into force on Apr. 1, 1955 are contained in the Criminal Law Amendment Act (SC 1968-69, c. 38)

which was assented to on June 27, 1969 and, with certain exceptions, came into force on Aug. 26, 1969. Among the changes are amendments relating to gaming and lotteries, "drinking and driving", homosexual acts and therapeutic abortion.

The provisions with respect to lotteries, which came into force on Jan. 1, 1970, make it lawful for the Federal Government to conduct a lottery and for a provincial government to pass legislation enabling it to conduct a lottery either alone or in conjunction with one or more other provincial governments. Provincial authorities may issue licences under which charitable and religious organizations may be authorized to conduct lotteries and games and under which agricultural fairs and exhibitions are no longer restricted to lotteries and games conducted on the exhibition grounds.

Under the amendment, a person is guilty of an offence if he drives a motor vehicle while the proportion of alcohol in his blood exceeds 80 milligrammes of alcohol in 100 millilitres of blood. It is compulsory for a driver to take a blood test when required to do so by a peace officer who has reasonable and probable grounds to believe that the person's ability to drive is impaired and it is an offence for a person to fail or refuse without reasonable excuse to take a blood test when so required. Where such blood test is taken within two hours of the alleged offence and the various conditions set out in the legislation relating to the taking of the test are complied with, the result of the test is *prima facie* evidence of the proportion of alcohol in the driver's blood. This amendment came into force on Dec. 1, 1969, with the exception of those provinces dealing with the alcohol breathalyzer legislation which refers to the specimen of breath to be given to the accused in an approved container for his use at the time the breath sample is taken. The proclamation of these provisions awaits the development of a suitable container.

The amendment contains provisions whereby therapeutic abortion is not unlawful where the operation is carried out after the therapeutic abortion committee of an accredited hospital has certified that the continuation of the pregnancy would or would be likely to endanger the life or health of the female. The operation may be performed only by a duly qualified medical practitioner and only in an accredited hospital or a hospital approved for the purpose by the Minister of Health of a province, who is also entitled to information relating to the issue of a certificate and to the operation.

The amendment removes from the ambit of the criminal law homosexual acts committed in private between two consenting adults.

As noted earlier in this Section, an amendment was made to the Criminal Code in 1959 restricting the publication of an admission or confession at a preliminary inquiry. Under the new amendment, provision is made whereby, on the application of the accused, the magistrate or justice holding a preliminary inquiry may make an order forbidding publication of *any* of the evidence until the accused has been discharged or, if he has been committed for trial, the trial has ended. Apart from such an order, the prohibition against publishing an admission or confession remains.

Previously, where there was reason to believe that the accused person was unfit on account of insanity to stand trial, the issue of his fitness to stand trial was decided as soon as it arose. If the court decided that the accused was not fit to stand trial, he was detained in custody at the pleasure of the Lieutenant-Governor. As the merits of the case against him were not tried, it was possible for an innocent person to be so detained. Under the amendments, the court has the power to postpone dealing with the issue of fitness to stand trial until after the prosecutor has presented his evidence. If the prosecutor's evidence is not sufficiently strong to make out a case, the accused may be acquitted and set free. If he requires treatment for a mental condition, he may be dealt with under the applicable

provincial mental health legislation instead of under the Criminal Code. In addition, in order to safeguard the rights of those persons who are found unfit to stand trial and therefore detained in custody, the Lieutenant-Governor of the province is authorized to appoint a board to review at least every six months the case of every person so detained, also to review at least every six months the case of every person who is held in custody in the province following an acquittal on account of insanity at the time the offence was committed.

In regard to sentence, the amendment contains provisions enabling courts to make more liberal use of suspended sentences, with or without probation. The amendments remove the previous restriction which prevented the court from suspending the passing of sentence when the offender had more than one previous conviction; enable probation orders to be transferred from one province to another; enable the court to make a probation order in addition to a sentence of imprisonment not exceeding two years; and make it a substantive offence, punishable on summary conviction, for a person on probation wilfully to refuse to comply with the probation order.

The new legislation also contains amendments relating to appeals by way of new trial in summary conviction cases which are designed to make the institution of such appeals less complicated and costly. For example, it is no longer necessary, as formerly, for the appellant to provide a transcript of the evidence taken at his trial unless the appeal court specifically orders him to do so. The definition of "dangerous sexual offender", introduced in 1961 (SC 1960-61, cc. 43-44), is narrowed to give the court of appeal express power to order a new hearing in the case of an appeal arising out of an application for preventive detention of a person as a habitual criminal or as a dangerous sexual offender.

Section 2.—Adult Offenders and Convictions

Offences may be classified under two headings, "indictable offences" and "offences punishable on summary conviction". Indictable offences are grouped in two main categories: (1) offences that violate the Criminal Code and (2) offences against federal statutes. These include the more serious crimes. Offences punishable on summary conviction—those not expressly made indictable—include offences against the Criminal Code, provincial statutes and municipal by-laws. It is debatable how far some summary conviction offences are of a criminal nature and whether their increase indicates an increase in crime. Many are breaches of municipal by-laws and contrary to public safety, health and comfort, as, for example, parking violations or practising trades without licence but, on the other hand, summary conviction offences may include such serious charges as assault and contributing to juvenile delinquency.

The following Subsection 1 deals with adults convicted of indictable offences, Subsection 2 with young adult offenders convicted of indictable offences, Subsection 3 with convictions for summary conviction offences and Subsection 4 with appeals.

Subsection 1.—Adults Convicted of Indictable Offences

Statistics of indictable crimes are based on persons, so that it may be possible to evaluate the population engaged in prohibited activities and to help in the treatment of anti-social behaviour in terms of subject-centred action. In the present counting system, although individuals may be charged with more than one offence, only one offence is tabulated for each person. This offence is selected according to the following criteria:

(1) if the person were tried on several charges, the offence selected is that for which proceedings were carried to the farthest stage—conviction and sentence; (2) if there were several convictions, the offence selected is that for which the heaviest punishment was awarded; (3) if the final result of proceedings on two or more charges were the same, the offence selected is the more serious one, as measured by the maximum penalty allowed by the law; (4) if a person were prosecuted for one offence and convicted of another—for example, charged with murder and convicted of manslaughter—the offence selected is the one for which the person was convicted.

In 1967 there were 51,388 adults charged with 86,689 indictable offences, of whom 45,703 were found guilty of 76,681 offences. In the previous year there were 51,080 adults charged with 89,176 indictable offences, of whom 45,670 were found guilty of 79,865 offences.

Table 2 classifies indictable offences by type of offence for 1966 and 1967. Class I covers offences against the person and in 1967 there were 6,217 males and 293 females convicted in this category, mostly for assaults of various kinds. Classes II to IV deal with offences against property. Thefts predominate among the offences in these classes, and breaking and entering, extortion and robbery—serious crimes which involve acts of violence—are the next most numerous. Class V deals with offences relating to currency and Class VI with miscellaneous offences; among the latter, the most numerous convictions are for offences connected with gaming, betting and lotteries. In 1967 there were 768 men and 195 women convicted under federal statutes of whom 730 men and 190 women were offenders under the Narcotic Control Act.

Female Offenders.—There were 5,816 female offenders convicted of indictable offences in 1967 compared with 5,729 in 1966. Of these offenders, Ontario accounted for 2,368, Quebec for 1,055 and British Columbia for 1,052. The ratio of female offenders convicted to total persons convicted moved upward from 12.5 p.c. in 1966 to 12.7 p.c. in 1967, ranging from 2.5 p.c. in Prince Edward Island to 14.8 p.c. in Ontario.

4.—Females Convicted of Indictable Offences, by Province, 1966 and 1967

Province or Territory	Females Convicted		Females Convicted to Total Persons Convicted

Multiple Convictions.—Table 5 shows the number of persons having more than one conviction at a court appearance for the years 1963 to 1967. Multiple convictions occur most often in cases of forgery and uttering, false pretences, theft, having in possession, and breaking and entering.

5.—Persons Convicted of More than One Offence at the Time of Trial compared with Persons Convicted of One Offence, 1963-67

Grand Totals.....	42,914	42,097	41,832	45,670	45,703

Disposition of Cases and Previous Convictions.—As shown in Table 1, p. 512, of all suspects before the courts for indictable offences in 1967, 88.9 p.c. were adjudged guilty. There was, however, considerable variation among the provinces in this respect, the proportion ranging from 85.8 p.c. in British Columbia to 98.1 p.c. in Newfoundland.

Table 6 shows that of the 45,703 persons convicted in 1967, 25.7 p.c. had no previous conviction, 13.2 p.c. had previously been found guilty of one offence and 30.0 p.c. had two or more earlier convictions; court records for the other 31.1 p.c. were not obtained. There is little change in these percentages from year to year.

Sentences, Method of Trial and Court Proceedings.—Table 7 summarizes the first court sentences given for indictable offences, Table 8 shows the method of trial and disposition of cases, and Table 9 shows persons charged and convicted of indictable crimes according to trial court.

Two kinds of sentences maintain for a certain period of time a relationship between the person dealt with by the court and the legal institutions of a community—probation

and commitment to an institution. There are several types of institutions to which a person can be committed, such as penitentiaries, reformatories, gaols and industrial farms. Theoretically, every institution has a specific purpose which is supposed to be taken into account when arriving at a legal decision. In practice, however, the availability of an institution in a given community is a factor in determining the decision rendered by the court.

**Subsection 2.—Young Adult Offenders (16-24 Years)
Convicted of Indictable Offences**

Attention has been focused in recent years on the needs of the young adult offenders of from 16-24 years of age who constitute a promising field for modern reception and diagnostic facilities equipped with educational, trade training and other formative disciplines. The young men and women in this age group account for 22.9 p.c. of the total

population 16 years of age or over, but they form over half of the criminal population committing indictable offences. The group includes some of the most daring offenders who already may be experienced criminals as well as first offenders likely to be turned from crime by further education and training. There were 24,417 young adult offenders in 1967, little changed from the previous year.

Subsection 3.—Convictions for Summary Conviction Offences

Offences punishable on summary conviction are triable by magistrates and justices of the peace under Part XXIV of the Criminal Code (SC 1953-54, c. 51) or under the provincial summary conviction Acts as the case may be. Data relating to these offences are based on convictions; no information is available on either the number of persons involved in these offences or the number of charges. In these cases, following arrest or summons to appear in court, the accused person must be tried by a magistrate or justice of the peace without the intervention of a jury. Such cases are heard in police court with a minimum of delay.

13.—Convictions for Summary Conviction Offences, by Type, 1967 and 1968

¹ Excludes Quebec.

Subsection 4.—Appeals

Appeal is an important safeguard in Canada's legal system and the conviction of a judge and jury or a judge may be appealed on the grounds that the verdict was unreasonable, that there was a wrong decision on some question of law or that there was a miscarriage of justice. In 1968 there were 4,118 appeals in indictable cases disposed of by the courts of which 280 were Crown appeals and 3,838 appeals of the accused. Of the Crown appeals 69 were from acquittal and 211 from sentence; of the appeals of the accused, 1,179 were from conviction and 2,659 from sentence. Appeals in summary conviction cases disposed of by the courts numbered 1,701 in 1968. Of these, 208 were appeals of the informant and 1,493 appeals of the accused. The informant appeals comprised 164 from acquittal and 44 from sentence, and appeals of the accused comprised 1,241 from conviction and 252 from sentence.

Section 3.—Juvenile Delinquents

Juvenile Delinquent, as defined in the Juvenile Delinquents Act, means any child who violates any provision of the Criminal Code or of any federal or provincial statute, or of any by-law or ordinance of any municipality, or who is guilty of sexual immorality or any similar form of vice, or who is liable by reason of any other act to be committed to an industrial school or juvenile reformatory under the provision of any federal or provincial statute. The commission by a child of any of these acts constitutes an offence known as a delinquency. The upper age limit of children brought before the juvenile courts in the provinces varies. The Act defines a child as meaning any boy or girl apparently or actually under the age of 16 years, or such other age as may be directed in any province. In Prince Edward Island, Nova Scotia, New Brunswick, Ontario and Saskatchewan under 16 is the official age; in Alberta under 16 for boys and under 18 for girls; in Newfoundland under 17; in Quebec, Manitoba and British Columbia under 18 years. Up to 1967, it was the practice of the Dominion Bureau of Statistics to publish information about juvenile delinquents 16 years of age or over separate from that of juveniles under 16 years of age. From 1967 on, the figures include all those considered as juveniles by the respective provinces, regardless of the differing upper age limits.

Included in the statistics of juvenile delinquents are cases (alleged as well as adjudged) which were brought before the courts and dealt with formally. A case was counted separately each time a child appeared before the court for a new delinquency or delinquencies. In instances where multiple delinquencies were dealt with at one court appearance, only one delinquency—the most serious—was selected for tabulation. Delinquencies reported as informal cases by the courts were not included nor were cases of children presenting conduct problems which were not brought to court or which were dealt with by the police, social agencies, schools or youth-serving agencies. Thus, community facilities for dealing with children's problems may have an influence on the number of cases referred to court and, therefore, an effect on the statistics of juvenile delinquents.

Section 4.—Correctional Institutions and Training Schools

Subsection 1.—Statistics of Correctional Institutions and Training Schools

Correctional institutions may be classified under four headings: (1) Penitentiaries—operated for adult offenders by the Federal Government in which, generally speaking, sentences of over two years are served; (2) Reformatories—operated for adult offenders by

the provinces in which individual sentences of up to two years are served; (3) Common Gaols—operated for adult offenders by the provinces or counties in which sentences of up to two years can be served but in which, generally speaking, short-term sentences are served; and (4) Training Schools—operated by the provinces or private organizations under provincial charter for juvenile offenders serving indefinite terms up to the legal age for children in the particular province.

There is a limited amount of statistical information available with respect to these types of institution. "In-custody" figures shown in Table 22 for penitentiaries refer only to those persons under sentence, but the figures for admissions include those received from courts as well as by transfer from other penitentiaries and by cancellation of paroles. Figures for releases include expiry of sentences, transfers between penitentiaries, releases on parole, deaths, pardons and releases on court order. In-custody figures for provincial and county institutions may include, in addition to those serving sentences, persons awaiting trial, on remand for sentence or psychiatric examination, awaiting appeal or deportation, any others not serving sentence and, for training school population, juveniles on placement.

Population figures in Tables 22 and 23 are for a given day of the year, which is Mar. 31 except for Quebec gaols where populations are counted as of Dec. 31. These figures represent, in effect, a yearly census of correctional institutions and, as such, are not indicative of the daily average population count. For instance, if an abnormal number of commitments is made to a certain institution on or just prior to Mar. 31, the result will be an unrepresentative population total for the institution in that year.

With regard to the fluctuations that might have occurred during the year between census days, the total population of correctional institutions has shown a general increase since Mar. 31, 1963; however, totals for each type of institution have recently shown a tendency to level off or decline slightly.

22.—Population in Penitentiaries, Years Ended Mar. 31, 1964-68

Subsection 2.—The Canadian Penitentiary Service*

The Penitentiary Service operates under the Penitentiary Act (SC 1960-61, c. 53) and is under the jurisdiction of the Solicitor General of Canada. It is responsible for all federal penitentiary institutions and for the care and training of persons sentenced or committed thereto. The Commissioner of Penitentiaries, under the direction of the Solicitor General, has control and management of the Service and all matters connected therewith. In the year ended Mar. 31, 1970, the federal penitentiary system consisted of six maximum security, nine medium security, 11 minimum security and nine specialized institutions. The latter are: the Special Correctional Unit at Ville de Laval, Que., for the treatment of hostile inmates; an Industrial Annex also at Ville de Laval; the Prison for Women at Kingston, Ont.; the Mountain Prison at Agassiz, B.C., for aged inmates; the Community Release Centres at Montreal, Toronto, Winnipeg and Vancouver; and the Matsqui Institution in British Columbia for narcotic addicts, male and female.

Six institutions receive inmates sentenced by the courts to imprisonment for terms of from two years to life. These are located at New Westminster, B.C., Prince Albert, Sask., Stony Mountain, Man., Kingston, Ont., Ville de Laval, Que., and Dorchester, N.B. All are maximum security institutions except the one at Stony Mountain, which is of medium security. A new maximum security institution—the Archambault Institution—located at Ste. Anne des Plaines, Que., was constructed as part of a plan to abandon the St. Vincent de Paul Penitentiary. Many persons sentenced to penitentiary terms in Newfoundland are held in the provincially operated institution at St. John's, under financial arrangements authorized by Sect. 14 of the Penitentiary Act.

Medium and minimum security institutions and the camps receive inmates transferred from the maximum security institutions on the basis of their suitability for special forms of training, including vocational training. The medium security institutions are located as follows: the Springhill Institution at Springhill, N.S.; the Federal Training Centre and the Leclerc Institution at Ville de Laval, Que.; the Cowansville Institution at Cowansville, Que.; the Collins Bay Penitentiary and the Joyceville Institution within a few miles of Kingston, Ont.; the Warkworth Institution at Campbellford, Ont.; Manitoba Penitentiary at Stony Mountain, Man.; the Drumheller Institution at Drumheller, Alta.; and the Matsqui Institution at Abbotsford, B.C. One of these institutions—the Federal Training Centre—is designed for the training of young offenders; two—the Leclerc Institution and the Joyceville Institution—are designed for the training of adult offenders, and five—the Springhill Institution, the Cowansville Institution, the Collins Bay Penitentiary, and the Warkworth and Drumheller Institutions—are designed for the training of young offenders and for adults who are likely to benefit from the training program.

Five minimum security correctional camps are operated as extensions of a main institution in their respective areas. These are located at William Head and Agassiz, B.C.; Beaver Creek and Landry Crossing near Bracebridge and Petawawa, Ont.; and Blue Mountain near Gagetown, N.B. Six minimum security farm annexes operate as extensions of the penitentiaries at Dorchester, Ville de Laval, Collins Bay, Joyceville, Stony Mountain and Prince Albert, respectively. There is also a minimum security industrial satellite at Ville de Laval.

The Prison for Women at Kingston receives female inmates transferred upon committal to penitentiary from any part of Canada. Mountain Prison, the special security prison camp located near Agassiz, B.C., which was originally used for the incarceration of Doukhobor Freedomites, has been converted to an institution for older male recidivists. A Special Correctional Unit operates in the Quebec penitentiary region for the training of hostile inmates. Four Community Release Centres—at Montreal, Toronto, Winnipeg and Vancouver—serve nearby institutions.

Headquarters of the Penitentiary Service is located at Ottawa and regional directorates at New Westminster, B.C., Kingston, Ont., and Ville de Laval, Que., for the Western,

* Prepared under the direction of A. J. MacLeod, (then) Commissioner of Penitentiaries, Ottawa.

Ontario and Quebec areas, respectively. Three Correctional Staff Colleges—at Kingston, Ville de Laval and New Westminster—are operated for the training of recruits and for the advanced training of penitentiary officers. These Staff Colleges provide excellent facilities for Service-wide conferences of institutional heads and other special groups of officers.

As at Mar. 31, 1970, about 54 p.c. of the inmates were in medium and minimum security institutions or specialized institutions. New institutions have been carefully designed to provide facilities for the rehabilitation of their inmates. All afford space for both indoor and outdoor recreation. Some of the old institutions are being brought up to date to meet present-day needs and others are being phased out.

Every inmate, on arriving at a penitentiary, is examined and classified. Young or first offenders are segregated from the recidivists. Doctors, psychologists and social workers examine them from the viewpoints of physical and mental health, abilities, training and need for schooling, so as to launch them on a program of rehabilitation. The Service policy on the training of inmates is about half way between a permissive attitude and one of stringent discipline. It is one of understanding as applied to each individual within a framework of discipline. The program of the Correctional Services is directed primarily toward assisting the inmate in every way to regain his proper place in society. The facilities to achieve this are available and the staff involved in the process is dedicated. Academic opportunities are provided with inmates attending classes on either a full-time or a part-time basis. Other students advance their education by correspondence study offered at the elementary, secondary or university level. In 1969-70, more than 2,600 inmates were advancing their education, often with a view to acquiring a trade or profession. Selected inmates attend community educational institutions.

Pre-employment, vocational and industrial training is available in all regions of Canada. Full-time vocational courses, similar to those given in technical schools, developed around skilled and semi-skilled unprofessional occupations are provided in 32 diverse occupations and skills, and more than 2,000 inmates participate each year. This type of training follows a standardized syllabus and courses vary in duration from six to eight weeks for pre-employment training to 12 months for occupations demanding a higher degree of skill and knowledge. It is possible for graduates of these courses to obtain provincial certification as qualified tradesmen or partial credits toward completion of apprenticeship, depending on academic standing, length of training and general suitability. The Service operates 99 industrial shops in 24 trades such as wood, metal, electricity, plumbing, masonry, textile, printing and electronics. Training courses are also available in computer programming and data processing. Industrial training is co-ordinated with the Department of Manpower and Immigration, so that the inmate may be trained in a trade in which he will be likely to find continuing employment after release.

A sound and healthy program of evening and weekend activities has been developed, consisting of recreational activities and of courses in the arts—poetry, painting, sculpture, music, singing, drama and public speaking. Many of these activities are conducted by interested members of the community on a voluntary basis.

The inmate who is in need receives professional services or counselling by staff specialists: 20 physicians, 14 dentists, 23 psychiatrists, 23 psychologists and 107 classification officers and social workers, employed on a full-time or a part-time basis, serve an inmate population of about 7,400.

Inmate training programs are currently under assessment with a view to their improvement and extension. Research projects are being conducted at l'Université de Montréal on post-release success rates; at McGill University on late-comers to crime; at Queen's University on sensory deprivation; and at the University of British Columbia on dangerous sexual offenders. Pilot projects on narcotic addiction are in operation at the Matsqui Institution in both male and female units. A pilot therapeutic community is being developed at the Springhill Institution in Nova Scotia. University students writing theses on social problems related to criminality are assisted in their research work.

Subsection 3.—The National Parole System

Parole is a means by which an inmate in any correctional institution in Canada, if he gives definite indication of his intention to reform, can be released from prison. The purpose of parole is the protection of society through the rehabilitation of the inmate. It is essential for the public to understand that the true purpose of punishment should be the reformation of the offender and not just vengeance or retribution but, since the Parole Board is as much concerned with the protection of society as with the reformation of the inmate, it recognizes that the welfare of an individual inmate must not be allowed to impair the success of the parole system or the public safety.

It is the function of the Parole Board to select those inmates who show some sincere intention to reform and to assist them in doing so by granting parole. The inmate then is allowed to serve the remainder of his sentence in society, but under supervision. He is subject to restrictions and conditions as to his conduct and behaviour, designed for his welfare and the protection of others. The Board is not a reviewing authority and is not concerned with the propriety of the conviction or the length of the sentence but only with the problem of deciding in each case whether or not there is chance of reformation. Parole is not a matter of clemency and is not granted on compassionate or humanitarian grounds but only if there appears to be at least a reasonable chance that the inmate will lead a law-abiding life. The treatment and training program in the institution is a vital part of the correctional process and parole is an extension of this training outside the institution. It is not a matter of pampering prisoners but of trying to give as many of them as possible a chance to rehabilitate themselves.

The National Parole Board operates under the authority of the Parole Act (SC 1958, c. 38), which came into force Feb. 15, 1959 replacing the Ticket-of-Leave Act, and was amended in 1967 (1966-67, c. 25) and in 1969 (1968-69, c. 38). The Board is composed of a chairman and eight other members and has jurisdiction for parole over any adult inmate of any prison in Canada who was convicted of an offence against an Act of the Parliament of Canada. It also has the jurisdiction to revoke or suspend any sentence of whipping or any order made under the Criminal Code prohibiting any person from operating a motor vehicle.

A person is sent to a federal institution if his sentence of imprisonment is two years or more, or to a provincial institution if his sentence is less than two years. All inmates can become eligible for parole but an inmate need not obtain the services of a lawyer to apply for parole. The date of the parole review, to grant or refuse parole, for an inmate in a federal penitentiary is set within six months of his entry into the institution. If the sentence is under two years, the inmate is eligible for parole after one third of the sentence is served. If the sentence is two years or more, the inmate is eligible after one third of the sentence is served or after four years, whichever is less, although he must serve at least nine months of his sentence. Where the sentence is for ordinary life, eligibility comes after seven years. If the inmate is serving a life sentence where death has been commuted, or a life sentence as a minimum punishment, parole cannot be granted until consent is given by the Governor in Council. In such cases, the Board cannot recommend parole until 10 years of the sentence have been served. The Board has the authority to grant an earlier release in exceptional circumstances where the case is deserving and the best interests of the community and the inmate will be served.

Unless an inmate advises the Board in writing that he does not want parole, the Board will review his case every two years whether he applies or not, until he is either granted parole or his sentence is served. However, once eligible for parole, the inmate may apply at any time. An inmate in a provincial institution must either apply or have someone apply on his behalf. As soon as an application is received, investigation is begun and the results presented to the Board for decision. All applications and reports are processed by

the Parole Board staff at Ottawa but regional officers, stationed at 28 centres across the country, interview applicants for parole in their respective areas, giving them an opportunity of making verbal representations to a representative of the Board. The regional officers submit to the Board a report of each interview with an assessment of the inmate's suitability for parole.

The decision of the Board with respect to any one inmate is based on reports it receives from the police, from the trial judge or magistrate and from various people at the institution who deal with him. Reports are also obtained, when available, from a psychologist or psychiatrist and, if necessary, a community investigation is conducted to secure as much information as possible about his family and background, his work record and his position in the community. From these reports, an assessment is made to determine whether or not he has changed his attitude and is likely to lead a law-abiding life.

A person on parole is under the care of a supervisor, who may be the Board's regional representative, an after-care agency worker or a probation officer, who reports to the regional officer. If he violates the conditions of his parole or commits a further offence or misbehaves in any manner, the Board may suspend or revoke his parole and return him to the institution to serve that part of his sentence outstanding at the time his parole was granted. If a parolee commits an indictable offence, his parole is automatically forfeited and he is returned to the institution to serve the unexpired balance of his sentence plus any new term to which he is sentenced for the commission of the new offence. The regional officer may also issue a Warrant of Suspension and have a parolee placed in custody if it is necessary to prevent a breach of any term or condition of the parole. These officers are thus able to exercise effective and adequate control over all parolees in their respective areas.

During the 11 years of its operation, the Parole Board has granted parole (of all types) to 28,800 inmates. During the same period 3,310 parolees have been returned to prison. There were 1,564 paroles revoked for misbehaviour or the commission of a minor offence, and 1,746 paroles were forfeited for the commission of an indictable offence. The proportion of parole successes to the number of parole releases was 89 p.c.

Section 5. —Police Forces and Crime Statistics

Organization of Police Forces.—The police forces of Canada are organized in three groups: (1) the federal force, which is the Royal Canadian Mounted Police; (2) provincial police forces—the Provinces of Ontario and Quebec have their own provincial police forces but all other provinces engage the services of the Royal Canadian Mounted Police to perform parallel functions within their borders; and (3) municipal police forces—most urban centres of reasonable size maintain their own police forces or engage the services of the provincial police, under contract, to attend to police matters. In addition, the Canadian National Railways, the Canadian Pacific Railway Company and the National Harbours Board have their own police forces.

The Royal Canadian Mounted Police.—The Royal Canadian Mounted Police is a civil force maintained by the Federal Government. It was established in 1873 as the North-West Mounted Police for service in what was then the North-West Territories and, in recognition of its services, was granted the use of the prefix "Royal" by King Edward VII in 1904. Its sphere of operations was expanded in 1918 to include all of Canada west of Port Arthur and Fort William (now Thunder Bay) and in 1920 it absorbed the Dominion Police, its headquarters was transferred from Regina to Ottawa and its title was changed to Royal Canadian Mounted Police.

The Force is responsible to the Solicitor General of Canada and is headed by a Commissioner who holds the rank and status of a Deputy Minister. Officers are commissioned

by the Crown and are selected from the non-commissioned ranks. The Force has complete jurisdiction in the enforcement of the federal statutes. By arrangement between the federal and provincial governments, it enforces the provincial statutes and the Criminal Code in all provinces except Ontario and Quebec and under special agreement it polices some 148 municipalities (as of Apr. 1, 1970). It is the sole police force in the Yukon and Northwest Territories, where it also performs various administrative duties on behalf of certain departments of the Federal Government. The Force maintains liaison officers in London and Washington and represents Canada in the International Criminal Police Organization, which has headquarters in Paris.

The 17 divisions making up the strength of the Force across Canada comprise 44 subdivisions which include 740 detachments. "Headquarters" Division is located at Ottawa, as are divisional headquarters for "Air" and "Marine", which support the operations of 12 land divisions. "Depot" and "N" Divisions are training centres. A teletype system links the widespread divisional headquarters with the administrative centre at Ottawa and a network of fixed and mobile radio units operates within the provinces. The focal point of the criminal identification work of the Force is the Directorate of Laboratories and Identification; its services, together with those of the divisional and subdivisional units and the five Crime Detection Laboratories, are available to police forces throughout Canada. The Force operates the Canadian Police College at which Force members and selected representatives of other Canadian and foreign police forces may study the latest advances in the fields of crime prevention and detection.

The uniform strength of the Force as of Mar. 31, 1970 was 9,925, including Marine Constables and Special Constables; at that time it maintained 2,894 motor vehicles, 22 aircraft, 60 ships, 264 inland boats, 38 police service dogs and 122 horses.

Quebec Provincial Police Force.—The Quebec Provincial Police Force is responsible for the maintenance of peace, order and public safety in the province, and for the prevention and investigation of criminal offences and of violation of all laws of the province.

The province is divided into two almost equal parts known as the Montreal Division and the Quebec Division. The Montreal Division has three subdivisions with headquarters at Granby, Hull and Montreal; the Quebec Division has four subdivisions with headquarters at Baie Comeau, Chicoutimi, Quebec and Rimouski. There are 109 detachments throughout the province—60 in the Montreal Division and 49 in the Quebec Division. The Force at the end of 1969 had 3,096 members—officers, non-commissioned officers and constables.

The Quebec Provincial Police Force is under the command of a Director General who is assisted by five Deputy Directors General. Each Division is headed by a Chief Inspector and each subdivision by a commissioned officer.

Ontario Provincial Police Force.—The Ontario Provincial Police, a Crown force, is the third largest deployed force on the North American Continent, having a total authorized strength of more than 4,750 (1970) uniformed and civilian personnel.

The Force is administered from general headquarters at Toronto by a Commissioner who has the rank and status of a Deputy Minister under the Minister of Justice. Other senior executive officers include two Deputy Commissioners and five Assistant Commissioners. The Force has two principal sides—Operations and Services—which are administered under the supervision of the Deputy Commissioner Operations and the Deputy Commissioner Services, respectively. In turn, five Divisions at the next level are administered by their respective Assistant Commissioners—Assistant Commissioner Field, Assistant Commissioner Traffic, Assistant Commissioner Administration, Assistant Commissioner Staff Services and Assistant Commissioner Special Services.

Specialized Branches under the Special Services Division include Auto Theft, Criminal Investigation, Anti-rackets, Intelligence, Security, Anti-gambling, Liquor Laws Enforcement and Precious Metals Theft.

For policing and administration purposes, the province is divided geographically into 17 districts. In the field, there are 199 detachments controlled through 17 district headquarters located at Chatham, London, Burlington, Niagara Falls, Downsview, Mount Forest, Barrie, Peterborough, Belleville, Perth, Long Sault, North Bay, Sudbury, Sault Ste Marie, South Porcupine, Thunder Bay and Kenora. Fifteen municipalities are policed under special contract.

Under provisions of the Ontario Police Act, the Force is responsible for: (1) enforcing federal and provincial statutes in those areas that are not required to maintain their own police department; (2) maintaining a traffic patrol on the more than 10,000 miles of King's Highways and 65,000 miles of secondary county and township roads; (3) enforcing the Liquor Licence Act and the Liquor Control Act for Ontario; (4) maintaining a Criminal Investigation Branch and other specialized branches to assist all other forces in the investigation of major crimes; and (5) assisting other forces by providing additional manpower in the event of emergencies.

Under the Staff Services Division, the Central Records and Communications Branch offers 24-hour-seven-day-week service to all police departments in Ontario on such matters as criminal records, fingerprint records, missing and wanted persons, dry cleaning and laundry mark identification, and stolen and recovery property lists.

The Force operates one of the largest frequency modulation radio networks in the world, with 102 fixed radio stations and more than 1,260 radio-equipped mobile units including motorcycles, marine units and aircraft. It also operates the Ontario Police Forces telecommunications network connecting all 17 districts as well as other police departments on a local, national and international basis. Extensions to routine police service are provided by canine, SCUBA and marine-bush rescue units strategically located throughout the province and available to other law-enforcement agencies upon request.

In addition to regular constable recruitment, the Force has a cadet program making it possible for qualified young men to create for themselves a career in a long-established police force. An important development in the progress of this Crown force occurred when legislative enactment provided that all ranking officers, from inspector up to and including the Commissioner, receive the Queen's Commission in the same manner as the Armed Forces.

Municipal Police Forces.—Provincial legislation makes it mandatory for cities and towns to furnish adequate municipal policing for the maintenance of law and order in their communities. Also, all villages and townships or parts of townships that have a population density and a real property assessment sufficient to warrant maintenance of a police force, and have been so designated by Order in Council, are made responsible for the adequate policing of their municipalities.

Uniform Crime Reporting.—The present method of reporting police statistics (police administration, crime and traffic enforcement statistics), known as the Uniform Crime Reporting Program, was started on Jan. 1, 1962, and was developed by the Dominion Bureau of Statistics in co-operation with the Canadian Association of Chiefs of Police Committee on Uniform Crime Reporting.

Police Personnel.—As shown in Table 24, police personnel in Canada numbered 43,981 at the end of 1968, including 37,014 sworn-in policemen, 6,475 other full-time employees serving as clerks, technicians, artisans, commissionaires, guards, special constables, etc., and 462 cadets. The ratio of police personnel per 1,000 population was 2.1 and the ratio

of police was 1.8. Provincial ratios for police personnel ranged from 1.2 to 4.6 per 1,000 persons and for police only from 1.1 to 4.4. In 12 selected metropolitan areas there were 15,631 police personnel including 13,508 police and 2,123 cadets and other full-time employees. Total municipal police personnel numbered 24,827, made up of 23,482 in municipal forces, 1,289 Royal Canadian Mounted Police and 56 provincial police under municipal contracts.

There were five policemen killed by criminal action during 1968 and 10 policemen lost their lives accidentally while on duty. Police transport facilities at the end of the year included 7,316 automobiles, 959 motorcycles, 744 other motor vehicles, 422 boats, 23 aircraft, 241 horses and 89 service dogs.

Crime Statistics.—Table 26 shows the number of crimes dealt with by the police in 1968, including offences under the Criminal Code, federal statutes, provincial statutes and municipal by-laws; offences cleared by charge and otherwise; and the number of adults and juveniles charged. Offences reported or known to the police but proved unfounded are not shown in the table but numbered 68,990, including 58,891 under Criminal Code classifications, 3,775 under federal statutes, 4,941 under provincial statutes and 1,383 under municipal by-laws, excepting traffic.

During 1968, the police reported 79,162 offences committed against the person, including 315 murders, 10,624 rape and other sexual offences, and 67,983 offences of wounding and other assaults (not indecent); all offences against the person resulted in the charging of 29,069 persons, 2,297 of them juveniles. During the year there were 544,822 cases of robbery, theft and other offences against property, resulting in 103,864 persons charged, 35,202 of them juvenile males and 3,212 juvenile females; 48,556 cases of fraud, false pretences, forgery, etc.; 1,996 of prostitution; 2,115 gaming and betting; 5,013 offensive weapons; and 215,866 other Criminal Code offences. In addition to the 40,058 federal statute offences reported, 4,761 were under the Narcotic Control Act and 682 under the controlled drug part of the Food and Drugs Act; these two classifications resulted in the charging of 3,287 persons.

Provincial and territorial fire marshals and commissioners reported 2,267 suspected or known incendiary offences, of which 720 were proved unfounded; 410 offences were reported cleared by charge, resulting in 354 adults and 198 juveniles being charged.

The number of motor vehicles stolen was 50,566 (an estimated 641.1 per 100,000 vehicles registered); 46,920 or 92.8 p.c. of these vehicles were recovered. Police were asked to locate 22,098 missing adults and 36,901 missing juveniles; 21,275 adults and 36,399 juveniles were found. The number of drownings reported by police was 1,258.

¹ Except traffic.² Except traffic, Narcotic Control Act and Food and Drugs Act.

During 1968, police departments in Canada reported 101,360 Criminal Code traffic offences, resulting in 66,309 persons charged, 1,632 of them females. Total charges reported under federal statutes numbered 9,803, provincial statutes 1,952,404 and municipal by-laws 365,256, excluding parking violations; the latter numbered 4,844,965, most of them reported by municipal police. There are certain traffic offences under provincial statutes which are almost identical to those under the Criminal Code. These are shown separately for 1967 and 1968 in Table 27.

The number of traffic accidents reported was 649,969, of which 4,423 involved fatalities, 113,214 resulted in injuries and 379,419 involved property damage of over \$100. There were 5,371 persons killed in traffic accidents, including 3,911 drivers and passengers, 1,217 pedestrians, 180 cyclists and 63 others; persons injured numbered 167,314.

The interpretation of the symbols used in the tables throughout the Year Book will be found on p. vii of this volume.

Section 1.—Trends in Planned Resource Development

Canada's era of settlement ended as the northern areas of the Prairie Provinces came under cultivation in the 1930s. Government policies, previously directed mainly toward the large-scale utilization of natural resources, have evolved toward concern with land use and the socio-economic circumstances of people involved in renewable resource-based industries. Undiscriminating land settlement policies and ill-advised individual choices had resulted in the settlement of some submarginal land throughout Canada, but most notably in the southern areas of Alberta and Saskatchewan, creating the need for land-use adjustment even before settlement had been completed. Far more significant than this, however, is the technological revolution in agriculture which has occurred during the past three decades concurrently with improvements in transportation and a strong trend toward the concentration in urban centres of a growing population.

Accompanying these changes has been an altered pattern of land use resulting from individual response to economic factors; but the rate of such adjustment has not been concomitant with the magnitude of the socio-economic dislocation in rural areas. Because of this situation, and because of increased concern with forest management, water pollution control, recreational resources and wildlife management, the trend has been for a vast increase in public decision-making with respect to resource management and use. Implicit in this has been the need for improved legislative-administrative organization relative to natural resources.

Of late, a growing popular movement concerned with the quality of the environment has become evident. A series of alarms over the contamination of water, food, air and soil has led many people to seek remedial action. It may be that these groups are pointing the way to a new outlook on renewable resources, one which takes into full consideration the consequence of man's plans for development upon the environment.

There have been a number of federal investigations of significance to the general problem of organization for resource use: the Senate of Canada Special Committee on Land Use, established in 1957 and continuing until 1963; the House of Commons Standing Committee

* Revised (June 1970) in the office of the Canadian Council of Resource Ministers, Montreal, Que.

Young red and white pine, white spruce and poplar trees flourish in a gully that, fourteen years previously, was badly eroded by water and wind.

Seed, herbicide and fertilizer being sprayed from the air over marginal farmland in southern Ontario. This technique can turn rough, thin-soiled land into rich usable pasture.

A water quality monitor being lowered from a Canadian research vessel into the depths of Lake Ontario.

Sulphur removal processes involving reactions with solids, liquids and gases are undergoing exhaustive tests by electrical utilities. Sulphur oxides rank high among power-station air-polluting emissions.

on Mines, Forests and Waters; and the National Conference on Reconstruction held in 1945. Notable among several provincial government activities along similar lines is the annual British Columbia resources conference.

One of the most important responses to this need to define goals was the "Resources for Tomorrow" Conference held in 1961 to permit examination of problems of resource use and the interaction of resource specialists in the face of modern requirements for integrated, comprehensive resource-use planning for social and economic development. As a result of recommendations from this Conference, the Canadian Council of Resource Ministers, composed of one representative from each province and one from the Federal Government, was established to perform a similar function on a continuing basis, with the aid of a Montreal-based staff.

The Canadian Council of Resource Ministers provides an intergovernmental forum for the exchange of views and information on current problems in renewable resources. Initially, Council concerned itself with intensive work in a limited number of areas producing surveys on resource agreements, the administrative framework of water resources management, and later outdoor recreation management. Council also sponsored several conferences in its early years, the most notable being the National Conference on Pollution and Our Environment in 1966 which involved over 600 representatives from government, industry, universities and public-interest groups in the exploration of environmental pollution. In 1970, Council extended its role of intergovernmental consultation through the work of six intergovernmental committees working on specific problems in forestry, land, pollution, water, the North, and integrated resource use. Among the projects expected to be completed within the year are a Forestry Seminar, an Intergovernmental Workshop on Pollution, surveys on land tenure, and surveys on several northern problems.

Constitutionally, administration and disposition of natural resources rest mainly with the provincial governments. Under the British North America Act, fisheries were under federal jurisdiction and the federal and provincial governments shared legislative authority with respect to agriculture, international and interprovincial waters, etc., with federal legislation taking precedence over provincial legislation should conflict arise; however, subsequent interpretations of the Act have established most aspects of control of resources as being matters of provincial jurisdiction. As well, in the years following Confederation certain provinces, by agreement, assumed varying degrees of responsibility for administering the fisheries legislation and other federal resources legislation. Within this general framework, the Federal Government has taken certain steps to establish a national resources policy, to co-ordinate the activity of the various federal departments concerned with resources and relevant social and economic problems, to undertake or share in research, and to provide initiative and financial assistance in the establishment of programs of resource adjustment and development; and provincial governments have moved significantly to accommodate their administrative structures to the need for integrated, planned resource adjustment and development.

Federal activity in resource conservation programs began before the turn of the century, starting in 1877. This included the work of the now long-disbanded Department of the Interior in the field of surveying and development of water resources in Western Canada. There have been numerous programs under the International Boundary Waters Treaty Act of 1911 undertaken by the International Joint Commission established to fulfil the provisions of the treaty and the confirming Act. Later programs included those conducted under the Prairie Farm Rehabilitation Act which was enacted in 1935 to aid in the rehabilitation of drought-stricken areas of the prairies, the work on the eastern seaboard conducted under the Maritime Marshland Rehabilitation Act of 1948, water development projects under the terms of the Canada Water Conservation Assistance Act of 1953, projects under the Atlantic Development Board Act of 1962, the broad and comprehensive resource development and adjustment programs being undertaken under the terms of the Agricultural and Rural Development Act of 1966 (previously, the Agricultural Rehabilitation and Development Act of 1961), and the Fund for Rural Economic Development Act in

1966. Over this period many projects of varying nature and scope have been undertaken—all toward the basic objective of achieving more effective utilization of Canada's land and water resources and the provision of a greater degree of economic stability and equitability for the rural areas of the country.

Section 2.—Government Agencies Concerned with Resource Use

Numerous agencies of the Federal Government and of the ten provincial governments have a more or less direct concern with renewable resources. The Federal Government undertakes direct action in areas under federal jurisdiction—the Northwest Territories, Indian reservations, limited federal forest preserves, national parks, certain international parks and waterways, certain aspects of fisheries, and matters relative to public health, navigation and certain aspects of agriculture. For the most part, the Federal Government has participated in the development and management of renewable resources through shared-cost programs with the provinces (see also Chapter XXIII, Sect. 4). The provincial governments, then, oversee the routine management of these resources.

Federal agencies whose activities impinge fairly directly on renewable resource development and use are as follows:—

CANADA DEPARTMENT OF AGRICULTURE—Research Branch, Economics Branch, Prairie Farm Assistance Administration, and Information Division

DEPARTMENT OF FISHERIES AND FORESTRY—Conservation and Protection Branch, Resource Development Branch, Information and Consumer Branch, Economics Branch, Directorate of Program Co-ordination, Forest Products Laboratory, and Eastern Rockies Forest Conservation Board

DEPARTMENT OF INDIAN AFFAIRS AND NORTHERN DEVELOPMENT—National and Historic Parks Branch, Canadian Wildlife Service, and Northern and Economic Development Branch

MINISTRY OF TRANSPORT—Marine Administration, and Canadian Meteorological Service

DEPARTMENT OF NATIONAL HEALTH AND WELFARE—Occupational Health Branch, and Public Health Engineering Branch

DEPARTMENT OF FINANCE—Economic Analysis Branch, Government Finance and Capital Markets Branch, Resource Programs Division, Economic Development Division, Tax Policy Branch, and Federal-Provincial Relations Branch

DEPARTMENT OF VETERANS AFFAIRS—Veterans' Land Administration

DEPARTMENT OF ENERGY, MINES AND RESOURCES—Four Departmental Sectors are concerned with mines and geosciences, mineral development, energy development, and water, including the Geological Survey of Canada, Surveys and Mapping Branch, Marine Sciences Branch, Inland Waters Branch, and Policy and Planning Branch

DEPARTMENT OF REGIONAL ECONOMIC EXPANSION

NATIONAL RESEARCH COUNCIL OF CANADA

NATIONAL ENERGY BOARD

ECONOMIC COUNCIL OF CANADA.

Various Crown corporations, credit agencies, advisory committees and boards, and quasi-governmental organizations also have interests in the fields of resource development, including:—

FARM CREDIT CORPORATION

FISHERIES RESEARCH BOARD OF CANADA

NORTHERN CANADA POWER COMMISSION

ADVISORY COMMITTEE ON NORTHERN DEVELOPMENT

ADVISORY COMMITTEE ON WATER USE POLICY

CENTRAL MORTGAGE AND HOUSING CORPORATION

NATIONAL HARBOURS BOARD

ST. LAWRENCE SEAWAY AUTHORITY

NORTHERN TRANSPORTATION COMPANY

INTERDEPARTMENTAL ADVISORY COMMITTEE ON FORESTRY STATISTICS

INTERDEPARTMENTAL CO-ORDINATING COMMITTEE FOR ARDA

CANADIAN COUNCIL ON RURAL DEVELOPMENT
 INTERDEPARTMENTAL COMMITTEE ON RESOURCES
 NATIONAL COMMITTEE FOR THE INTERNATIONAL HYDROLOGIC DECADE
 CANADIAN COMMITTEE OF THE INTERNATIONAL BIOLOGICAL PROGRAM.

The Dominion Bureau of Statistics has, of course, functions relevant to nearly all aspects of the national life, including resources. The above agencies are not identified with a particular department, and function more or less autonomously but are usually associated with a Minister of the Crown for purposes of reporting to Parliament (see pp. 137-161). Although each of these agencies carries out programs bearing on the use and development of natural resources, direct unilateral action is unusual except relative to lands and waters under the jurisdiction of the Federal Government. Major exceptions are the Prairie Farm Rehabilitation Administration programs and significant federal programs for the conservation and development of the various fisheries resources. Major items of federal legislation relative to renewable resources include:—

The Department of Agriculture Act
 The Prairie Farm Rehabilitation Act
 The Farm Credit Act
 The Department of Fisheries Act
 The Forestry Development and Research Act
 The Agricultural and Rural Development Act
 The Fund for Rural Economic Development Act
 The National Parks Act
 The Migratory Birds Convention Act
 The International River Improvements Act
 The Dominion Water Power Act
 The Canada Water Conservation Assistance Act
 The Atlantic Provinces Power Development Act
 The Navigable Waters Protection Act
 The Veterans' Land Act
 The Economic Council of Canada Act
 The National Energy Board Act
 The National Harbours Board Act
 The St. Lawrence Seaway Authority Act
 The Resources and Technical Surveys Act
 The Fisheries Development Act
 The Canada Shipping Act
 The Arctic Waters Pollution Prevention Act
 The Northern Inland Waters Act
 The Canada Water Act.

The major provincial agencies concerned with development of renewable resources are:—

NEWFOUNDLAND—Department of Fisheries, and Department of Mines, Agriculture and Resources
 PRINCE EDWARD ISLAND—Department of Fisheries, and Department of Industry and Natural Resources
 NOVA SCOTIA—Department of Fisheries, Department of Lands and Forests, and Nova Scotia Water Resources Commission
 NEW BRUNSWICK—Department of Fisheries, and Department of Natural Resources
 QUEBEC—Conservation Branch of the Department of Lands and Forests, Department of Natural Resources, and Department of Tourism, Game and Fish
 ONTARIO—Conservation Authorities Branch and Air Management Branch of the Department of Energy and Resources Management, and Ontario Water Resources Commission
 MANITOBA—Water Control and Conservation Branch of the Department of Mines and Natural Resources
 SASKATCHEWAN—Department of Natural Resources
 ALBERTA—Department of Lands and Forests, and Eastern Rockies Forest Conservation Board
 BRITISH COLUMBIA—Department of Lands, Forests, and Water Resources, and Fish and Wildlife Branch and Provincial Parks Branch of the Department of Recreation and Conservation.

Section 3.—International Boards and Commissions

The continental context of Canadian resource management is implicit in the purposes of the various international boards and commissions in which Canada participates. Of the 35 or more, some 25 are concerned with water and most of the remainder have to do with fisheries.

The International Joint Commission was established to fulfil the provisions of the International Boundary Waters Treaty of 1909 between the United States, Great Britain and Canada. Three commissioners are appointed by the President of the United States and three by the Government of Canada. The Commission deals with the use, obstruction and diversion of boundary waters and rivers crossing the International Boundary. It conducts investigations on water use problems with international implications and reports its findings with recommendations to both governments.

International boards of control that report to the International Joint Commission are: a ten-member International St. Lawrence Board of Control, concerned with levels of Lake Ontario and the regulation of outflow from the lake; a two-member St. Croix Board, concerned with water levels and supervision of dam construction; the Lake of the Woods Board, the Lake Superior Board, the Rainy Lake Board and the Kootenay Board, all of which are concerned with water levels; a two-member Columbia River Board, concerned with the effects of the Grand Coulee dam; a four-member Souris River Board, concerned with allocation of water; and a five-member Niagara Board, concerned with levels of Grass Island Pool and the Lake Erie ice boom. Functions similar to those of the Boards are carried out by two accredited officers relative to measurement and apportionment of waters of the St. Mary and Milk Rivers. Also reporting to the International Joint Commission are five international engineering boards for the Saint John, St. Croix, Souris and Red, Pembina and Columbia Rivers. A seven-member Technical Advisory Board on Air Pollution is concerned with air pollution by ships plying the Detroit River. An Advisory Board on Control of Pollution of Boundary Waters, reporting to the International Joint Commission, is concerned with the connecting channels of the Great Lakes, and other boards concerned with pollution are: the Advisory Board on Pollution Control—St. Croix River, the International Red River Pollution Board, the International Lake Erie Water Pollution Board and the International Lake Ontario—St. Lawrence Water Pollution Board. The eight-member International Great Lakes Levels Board is concerned with investigation and study of water levels of international or boundary waters, reporting to the International Joint Commission.

The International North Pacific Fisheries Commission, composed of four members each from Canada, the United States and Japan, operates to fulfil the terms of the International Convention for the High Seas Fisheries of the North Pacific Ocean, the objective of which is to achieve maximum sustained yield in non-territorial waters by co-ordination of the studies necessary to determine appropriate application of treaty principles. The Great Lakes Fisheries Commission, composed of two national sections of three members each, formulates and co-ordinates research programs and recommends programs for the eradication or control of sea lamprey populations. Responsibility for Canada's treaty obligations is shared by arrangement between the Federal Government and the Government of Ontario. The Northwest Atlantic Commission operates under the International Convention for the Northwest Atlantic Fisheries signed by Canada, the United States, the United Kingdom, France, Spain, Denmark, Portugal, Iceland, Norway, Italy, East Germany and the Soviet Union. All contracting governments are represented on the Commission and panels have been established with jurisdiction over defined areas of particular interest to some signatories. The Commission has no regulatory powers but conducts scientific investigations and recommends measures to maintain stocks of fish. The North Pacific Fur Seals Commission operates under the Interim Convention on Conservation of North Pacific Fur Seals signed by Canada, the United States, Japan and the Soviet Union, undertaking research, recommending enforcement measures required to eliminate pelagic sealing

on the high seas, and overseeing the apportionment of skins from the Pribilof, Commander and Robben Islands. The International Whaling Commission, composed of representatives of Australia, Brazil, Argentina, France, South Africa, the United States, the United Kingdom, Canada, Norway, New Zealand, Iceland, Japan, Panama, Mexico and Denmark, has power to amend whaling rules and regulations of the International Convention, and to recommend new regulations with respect to the conservation and use of the resource. The Roosevelt-Campobello International Park Commission is concerned with the administration and development of the Campobello Island estate of the late Franklin D. Roosevelt as an international park.

Section 4.—Federal and Federal-Provincial Resource Development Programs*

Subsection 1.—Land Resources Development

Information available regarding Canada's land resources is shown in Table 1, where the land area is classified as occupied agricultural, forest and "other" land, the last including urban land, road allowances, grass and brush land and all waste land such as open muskeg, swamp and rock. The Department of Fisheries and Forestry estimates that about 48 p.c. of the land area of Canada is forested and, according to the Census of 1966, less than 8 p.c. is classed as occupied farm land. A great part of the 1,599,542 sq. miles of "other" land is located in the Yukon and Northwest Territories which together have a land area of 1,458,784 sq. miles. The occupied farm land in these Territories is almost nil and the forest area is estimated at 275,800 sq. miles.

On the basis of information currently available, it is estimated that, in addition to the present arable land across the country, about 40,000,000 acres of virgin land can be used for arable crops if the need arises. However, most of these reserves will require clearing or other improvement measures before they can be used for agriculture. In addition to the present arable land and potentially arable land, 55,000,000 to 60,000,000 acres are suitable for wild pasture.

As the Canada Land Inventory progresses, a great deal of detailed information is becoming available on the land resources of the country, their present utilization and their capability. This project, initiated under the ARDA administration and continued by the Department of Regional Economic Expansion, is the vehicle for detailed classification of the land resources of Canada. The Inventory will map present land use and assess land capability for such different uses as agriculture, forestry, recreation and wildlife in and adjacent to the settled portions of Canada. The vast amount of information obtained will be stored on computer tapes, analysed and published in map or other form in such a way that the Inventory will become a working tool in resource planning and rural development programs throughout the country. About 100 agencies of the 10 provincial and the Northwest Territories governments are involved in the Inventory, as well as numerous universities, private companies and individuals. By late 1970, the present land-use phase of the Inventory will be virtually complete and substantial progress will have been achieved in the agriculture, forestry, wildlife and recreation phases. Capability maps at a scale of 1:250,000 may be obtained from Information Canada as they become available.

The Prairie Farm Rehabilitation Act of 1935 provided for rehabilitation of areas subject to drought and wind erosion in the Prairie Provinces and in 1937 was amended to broaden its scope to include land utilization and resettlement. In the main, the PFRA's land-use programs have involved the establishment of community pastures on land submarginal for cereal crop production, and over the years this program has resulted in the establishment

* Federal and provincial programs for the conservation and development of the fisheries resources of Canada are discussed at pp. 648-664 of this volume; provincial and territorial conservation of fur resources programs at pp. 670-675; federal and provincial forestry programs at pp. 630-637; and wildlife resources and conservation at pp. 55-58.

1.—Land Area classified as Occupied Agricultural or Forest, by Province

NOTE.—Figures for occupied agricultural land were obtained from the 1966 Census; areas of forest land were compiled by the Department of Fisheries and Forestry from estimates supplied by the Forestry Service in each province.

Description	New-found-land sq. miles	Prince Edward Island sq. miles	Nova Scotia sq. miles	New Brunswick sq. miles	Quebec sq. miles	Ontario sq. miles	Manitoba sq. miles	Saskatchewan sq. miles	Alberta sq. miles	British Columbia sq. miles	Y.T. and N.W.T. sq. miles	Canada sq. miles

¹ Included in *Forest Land*; duplication eliminated in the item *Net Productive Land*.

² Areas incapable of producing crops of merchantable timber because of adverse climatic, soil or moisture conditions, and reserve forest lands for which no inventories are available.

³ Includes only occupied agricultural land (less forest, woodland) plus productive forest land.

⁴ Includes grass and brush land and all waste land such as open muskeg, swamp and rock and also unclassified land.

⁵ *Net Productive Land* plus *Non-productive Forest Land* plus *Other Land*.

⁶ *Net Productive Land* plus *Non-productive Forest Land* plus *Other Land*.

of 87 operating community pastures, with five more under construction, totalling 2,500,000 acres, at a cost of \$10,000,000. The PFRA also operates a tree nursery at Indian Head in Saskatchewan, which distributes trees free to farmers for farm and field shelterbelts.

The Agricultural Rehabilitation and Development Act, proclaimed in 1961, arose out of recognition of a national interest in achieving better land use, improving the viability of farm units at present uneconomic, and improving employment and income opportunities in rural areas. In many areas of Canada, income is unacceptably low and land use faulty or inefficient. To some considerable degree these economic, social and conservation problems have been caused by farm mechanization which places smaller, less-mechanized farms at a disadvantage; a notable symptom of this is the decrease in the number of farms in Canada from about three quarters of a million in 1931 to less than half a million (431,000) in 1966.

The Act, amended in 1966 as the Agricultural and Rural Development Act and supplemented by the Fund for Rural Economic Development Act 1966, is enabling legislation intended to be complementary and supplementary to existing federal and provincial legislation in respect of renewable resources and rural social and economic development; to aid in correlation and expansion of existing programs; and to fill gaps. As such, it has considerable potential as an instrument for programs of alternate land use, soil and water conservation, development of rural income and employment opportunities, and for research. ARDA is a federal-provincial program which operated from its inception to Mar. 31, 1965 under a federal-provincial General Agreement, and after that time under the Federal-Provincial Rural Development Agreement covering the period 1965-70. On Mar. 31, 1970, the second ARDA agreement expired. New agreements are under negotiation with the individual provinces to continue this project. Under the General Agreement, ARDA approved projects involving a federal share totalling \$34,517,000 of which \$13,484,000 was expended during the period. The federal share is usually in the order of 50 p.c. of total cost. The Federal-Provincial Rural Development Agreement 1965-70 provided for an expenditure of \$125,000,000 during that period. In addition, \$300,000,000 was provided under the Fund for Rural Economic Development Act to finance major projects in special rural development areas.

To the end of March 1968, \$135,233,000 was spent on 1,051 projects under the second ARDA agreement, the federal share being \$65,269,000. Examples of ARDA projects are the creation of a comprehensive development plan for the Edson area in Alberta, the development of irrigation and water supply in British Columbia, the provision of community pastures in Saskatchewan, and small projects on river-course development in Quebec. Four projects for comprehensive regional development are under way—the Northeast and the Mactaquac projects in New Brunswick, the Gaspé-Lower St. Lawrence-Magdalen Islands project in Quebec, and the Interlake project in Manitoba. Three other studies are under consideration—one on Prince Edward Island, one on northeastern Nova Scotia and one on the west coast of Newfoundland.

Subsection 2.—Water Resources Development

The first federal-provincial water development program was established to deal with the special situation that arose as the result of the drought in the Prairie Provinces in the 1930s. Since 1935, the Prairie Farm Rehabilitation Administration (PFRA) has, in addition to other resource-development functions, provided engineering and financial assistance for some 91,000 small dams and dugouts (small artificial ponds for water collection) to supply water for livestock, irrigation and domestic use. In the main, such works serve individual farmers but some serve groups of farmers or communities. The PFRA provides free engineering services and contributes toward the cost of construction of community projects on larger watersheds. Also, because of its engineering experience, the PFRA has been involved in larger-scale irrigation and water development projects, including renovations to the Bow River project in Alberta and the construction of the recently completed South Saskatchewan River development project. Land reclamation projects

have been carried out in Manitoba along the Saskatchewan and Pasquia Rivers near The Pas, along the Assiniboine River between Portage la Prairie and Headingly, at various points in the Interlake region, and along the Northwest Escarpment. The Assiniboine River project includes the creation of a reservoir near Shellmouth and construction of a diversion canal near Portage la Prairie to carry floodwaters to Lake Manitoba.

The Atlantic Development Board, which was set up in 1962 to prepare, in consultation with the Economic Council of Canada, an over-all co-ordinated plan for the promotion of the economic growth of the Atlantic region, initiated, among other projects, a number relative to water use for power production and for industry. Although in 1970 the Board was replaced by the Atlantic Development Council, set up to advise the federal Minister of Regional Economic Expansion on Atlantic problems, many of the programs undertaken by the Board are being continued under the Federal Government's co-ordinated program of regional development. The most notable of the Board's projects relating to water resources were: the provision of a \$20,000,000 grant toward the \$120,000,000 Mactaquac dam in New Brunswick and a similar grant toward Newfoundland's \$88,000,000 Bay d'Espoir hydro-electric project; assistance in the development of water supplies to meet the needs of industries—mainly fish processing plants—in some 35 communities; commitment of \$2,000,000 toward abatement of industrial pollution in inland waters of the region; and, as part of its planning activities, the engagement of consultants to carry out a \$1,500,000 study on the supplies of water in the region and the demands that are likely to be made upon them up to 1981 and beyond.

Other federal and federal-provincial programs or studies concerned with water, recently completed or under way, are: the Greater Winnipeg Floodway program, a 30-mile floodway past Winnipeg constructed at an estimated cost of \$63,000,000, of which the Federal Government's share is about \$43,700,000; the allocation of water from interprovincial streams to be recommended by the Prairie Provinces Water Board; a four-year, \$15,000,000 water-supply study of the Saskatchewan-Nelson Rivers basin by the Saskatchewan-Nelson Rivers Basin Board; a co-ordinated study of Ontario rivers flowing into James Bay and Hudson Bay, to assess their quantity and quality as well as the present and future requirements for these waters, and suggest alternative possibilities for their use; the 10-year Fraser River agreement between British Columbia and the Federal Government to provide flood protection on the Fraser delta; and a considerable number of varied hydrologic and water-quality studies conducted by the Department of National Health and Welfare, the National Research Council, the Ministry of Transport, the Department of Energy, Mines and Resources, the Department of Fisheries and Forestry and several other agencies.

The Federal Government in 1970 passed three new and important pieces of legislation related to water resources management: the Arctic Water Pollution Prevention Act (SC 1969-70, c. 47) authorizes measures to forestall a major pollution disaster in Canada's Arctic Waters; the long-awaited Canada Water Act (c. 52) provides the legislative base to designate water quality management areas and to establish intergovernmental committees or agencies to advise on questions of water management and to conduct management programs, and authorizes the punishment of pollution offenders and the banning of phosphates in detergents; and the Northern Inland Waters Act (c. 66) provides for the licensing and regulation of water use in the Northwest Territories and contains provisions against water pollution. Other legislative initiatives in the area of water pollution included amendments to the Canada Shipping Act regarding regulations for disposal of sewage and garbage from ships, and amendments to the Fisheries Act concerning water pollution affecting fish.

Each provincial government has programs in pollution control as an aspect of resource management, either centred in one agency or divided among several. The major responsible agencies in each province are:—

NEWFOUNDLAND—Newfoundland and Labrador Water Authority

PRINCE EDWARD ISLAND—Prince Edward Island Water Authority

NOVA SCOTIA—Nova Scotia Water Authority

NEW BRUNSWICK—New Brunswick Water Authority
QUEBEC—Quebec Water Board, and Department of Health
ONTARIO—Ontario Water Resources Commission, and Department of Health
MANITOBA—Clean Environment Commission
SASKATCHEWAN—Water Resources Commission
ALBERTA—Division of Environmental Health Services, Department of Health
BRITISH COLUMBIA—Pollution Control Branch, Department of Lands, Forests and Water Resources.

These provincial agencies oversee environmental quality through such various means as regulation and licensing of waste discharge, attendance to complaints, construction of works, technical assistance and research. One way in which the Federal Government assists is by low-cost loans to municipalities for sewage-treatment plants and related facilities. From 1960 to 1968, \$272,000,000 was lent by the Central Mortgage and Housing Corporation for 1,381 projects in 905 municipalities.

Pollution control has a special international aspect, particularly because of the long border of water separating Canada and the United States along the Great Lakes-St. Lawrence waterway. In 1969 a report was made to the International Joint Commission on pollution in Lake Erie, Lake Ontario and the international section of the St. Lawrence River. Many of the recommendations for municipal and industrial waste treatment, control of pollution from land drainage, and control of oil and industrial spills are expected to be adopted by the Commission.

In the immediate future, pollution should come even more to the forefront of government activities. It is expected that more legislation will be updated and government machinery will continue to evolve to meet this challenge of management.

Section 1.—Agricultural Trends and Highlights in 1969 and 1970*

Today's farmer, as both a primary producer and a user of end products, plays an integral role in Canada's economic structure. Not only does he provide food in increasing quantities for a growing urban population but he also, through substantial expenditures on goods and services, contributes extensively to the well-being of other industries and businesses.

During 1969, total farm operating expenses and depreciation charges reached a record level of \$3,429,100,000, an amount 1.8 p.c. above the corresponding amount in 1968. Municipal real estate taxes were set at a high of \$185,000,000. Higher wages and more hired help pushed the farm labour bill to more than \$300,000,000. Machinery expenses reached a new record level of \$554,400,000, and feed expenditures rose to \$554,500,000.

Through the years, farm purchases of machinery and other farm-related goods have encouraged the steady expansion of industrial employment. The farm machinery and feed processing industries, particularly, are directly affected by farm prosperity but many payrolls in petroleum, rubber, automotive, hardware, paint and electrical plants are also based on farm customers. In addition, numerous manufacturing plants across the country are engaged in the processing of goods produced on Canadian farms.

The increased use of machinery on farms has had its effect on farm numbers and on the farm labour force. During 1969, total employment in Canadian agriculture was 535,000 workers, including both family and hired help; that was 11,000 fewer than during the previous year and 146,000 fewer than in 1961. The number of Canadian farms declined from 481,000 in 1961 to 431,000 in 1966. By 1980, it is expected that there will be only about 315,000 farms in Canada.

*Prepared under the direction of S. B. Williams, Deputy Minister of Agriculture, Ottawa.

However, although farm numbers and employment are on the decline, farm production was higher in 1969 than in 1968, the increase coming mainly from larger wheat, oat and barley crops. There were smaller increases for rye, flaxseed and rapeseed crops and a reduction in the potato crop and in livestock production. On the other hand, farm cash receipts at \$4,205,000,000 in 1969 declined 3.6 p.c. from those of 1968. These receipts include both initial farm receipts for agricultural products and supplementary government payments. The drop was mostly attributable to lower returns from wheat sales and Canadian Wheat Board participation payments, which were only partially offset by increased receipts from the sale of livestock and livestock products.

Farmers received about 4.8 p.c. more for their livestock and livestock products during 1969, despite a decline in the numbers of cattle and hogs marketed. Receipts from sales of dairy products, poultry and eggs were also higher and, on the crop side, there was an increase in receipts from flaxseed, rapeseed, grain corn, sugar beets, potatoes, fruits and tobacco. However, returns from field crops generally were down substantially. Farmers obtained only 35 p.c. of their income from field crops compared with 40 p.c. in 1968 and 42 p.c. during the 1962-66 period.

Net income was, of course, considerably smaller than farm cash receipts; it was estimated at \$1,688,400,000, 3.1 p.c. below the 1968 level but 4.9 p.c. above the 1964-68 average of \$1,609,400,000. This net income takes into consideration the value of changes in farm-held inventories of livestock and field crops between the beginning and the end of the year. Realized net farming income, which takes no cognizance of such changes, was \$1,379,500,000, 10 p.c. below the 1968 value of \$1,532,800,000 and 11.8 p.c. below the 1964-68 average value of \$1,564,800,000. Increased farm operating expenses and depreciation charges, coupled with a drop in farm cash receipts, caused this decline.

Farmers continued to invest in real estate, livestock, machinery and equipment but the rate of investment declined. The 1967-to-1968 increase of 6.8 p.c. was the smallest in recent years. The 1969 increase in the value of farm real estate slowed down even more in most areas and in some parts of the country was lower than in 1968. There was also a decline in the amount of credit used by farmers. During 1968, some \$2,177,000,000 in credit was extended to farmers, which was down from 1967. The total farm debt in 1968 was estimated at \$4,105,000,000.

Looking to the 1970s, growing population and income are expected to create strong domestic markets for food and other farm products, particularly for beef, pork and poultry, and also to increase the demand for fruits, vegetables and cheese. By 1980 it is expected that Canada will require 52 p.c. more beef cattle, 40 p.c. more hogs and 69 p.c. more poultry than in 1970. As well, Canadians will spend only 18 p.c. of their dollar on food in 1980 compared with 20 p.c. in 1970.

Agricultural Highlights in 1969 and 1970

Most areas of Canadian agriculture were affected by new federal programs and legislation introduced during 1969 and the first half of 1970.

Early in 1969, Federal Government officials licensed the Mexican wheat variety *Pitic 62*, marking the first time in Canadian history that a licence was granted to a variety of non-milling hard red spring wheat. The new durum wheat variety, *Hercules*, was also licensed. Cattle breeders were again permitted to import cattle from France and Switzerland and from the beginning of this arrangement in 1965 to January 1969 more than 800 head of breeding stock had entered Canada through the maximum security quarantine station at Grosse Île, Que.

In February, the Agricultural Stabilization Board was authorized to make an interim deficiency payment on 1968 sugar beets of \$2.50 per standard ton (250 pounds of sugar).

March was a busy month. More than 400 persons, representative of all aspects of Canadian agriculture, gathered in Ottawa at the Canadian Agriculture Congress. It was the largest meeting of its kind in 35 years. New regulations covering beef cattle entries in livestock fairs were announced, under which Record of Performance testing became a

prerequisite for two bull classes in 1970 and will be a requirement for all 1971 bull classes. The new hard red spring wheat, *Neepawa*, was licensed. A starch diversion program aimed at stabilizing prices to potato growers in the Atlantic region was announced, based on a support level of \$1.85 per barrel for Canada No. 1 potatoes with an allowance of 25 p.c. for culls.

Also in March, the Federal Government's hog quality premium of \$3.00 was adjusted to apply to carcasses with an index score of 105 or higher; previously, the premium had been paid for carcasses scoring 103 or higher. A \$1,200,000 Federal Government contribution to Quebec's experimental crop insurance program was announced, which, coupled with provincial government subsidies, reduced the Quebec farmer's insurance premium by 50 p.c.

The Canadian Dairy Commission program for 1969-70 consisted of continued market price support for major dairy products and a direct subsidy to manufacturing milk and cream shippers under quotas established by the Commission. The support prices were: butter, 65 cents; skim milk powder, 20 cents; and cheese, 42 to 47 cents, depending on quality and the season of production. The direct rate of subsidy to farmers for manufacturing milk and cream was \$1.25 per hundred pounds of milk, with an equivalent rate for cream. The one major change in the 1969-70 dairy policy was an increase in the holdback to farmers from 21 cents per hundred pounds to 26 cents, effective Apr. 1, 1969. The Commission also added a 52-cents-per-100-pounds subsidy holdback against surplus production. The holdback funds are used to cover the cost of exporting surplus dairy products.

In April, Canada's sheep growers were given a 29.4-cents-per-pound deficiency payment on the 1968-69 wool clip. Canada and France agreed to establish a new livestock import quarantine station on St. Pierre, a French island south of Newfoundland in the Gulf of St. Lawrence. From January to April, more than 230 head of French and Swiss cattle were cleared from the maximum security quarantine station at Grosse Île, Que., for shipment to farms across Canada.

During May, an agreement which opened the way for long-term Farm Credit Corporation loans to Indian farmers was given Cabinet approval.

In June, the Canada Department of Agriculture reorganized its Economics Branch to strengthen farm management and market research programs. The Canadian Farm Management Data System (CANFARM), a modern, computerized record-keeping system developed in co-operation with the provinces and a number of universities, is part of the reorganized Branch. Some 5,000 farmers were enrolled in the CANFARM program in 1970. Following consultations with British authorities, the Canadian Dairy Commission said it would control exports of cheddar cheese to British buyers during 1969. The arrangement provided for the sale of 29,000,000 pounds of Canadian cheese between Apr. 1, 1969 and Mar. 31, 1970.

In July, the Federal Government announced its price support program for the 1969 sugar-beet crop. Through deficiency payments, sugar beets were supported at a national average level of \$15.98 per standard ton (250 pounds of sugar) delivered to the processing plant. Sugar beets are grown in Alberta, Manitoba and Quebec.

In late September, the Canadian Dairy Commission announced that the summer support price for first-grade cheddar cheese—46½ cents for 92 score and 47 cents for 93 score or better—would continue to the end of October. The support price for cheese manufactured from Nov. 1, 1969 to Mar. 31, 1970 was set at 42 cents a pound.

In early October, Cabinet approval was given to an agreement to provide loans for the co-operative purchase and use of farm machinery, buildings and installed equipment to syndicates of three or more Indians farming on a reserve. Later that month, it was announced that Feed Freight Assistance Program rates would be reduced effective Nov. 1, 1969.

In early November, the new Canada Agriculture Research Laboratory at Harrow in Ontario was opened. The Minister headed the Canadian delegation to the 15th Biennial

Conference of the Food and Agriculture Organization in Rome. Details of the 1969-70 price support program for wool were announced later in the month; the program gave a support price of 60 cents per pound of eligible grades of wool.

In December, a deficiency payment of \$3.23 per standard ton of sugar beets produced by growers in the 1968 crop year was announced. The first mailings of CANADEx, a technical information system covering new agricultural developments and technology, were made by the Department's Information Division. The service was made available to extension workers and instructors in agriculture.

A cutback in the use of DDT marked the opening of 1970. Under the Pest Control Products Act, the pesticide could be registered for use on only 12 agricultural crops. In 1969, DDT had been registered for insect control of 62 food crops. Effective Jan. 5, 1970, the quality premium on hog carcasses scoring an index of 105 or higher was reduced from \$3.00 to \$1.50. Also in January, a new variety of six-rowed barley, *Bonanza*, was licensed.

With February came Operation LIFT, the Federal Government's Wheat Inventory Reduction Program designed to reduce Canada's wheat inventory by discouraging production in 1970. Farmers who reduced wheat acreage and increased summerfallow by a corresponding amount received federal compensation payments of \$6.00 per acre. There was an additional \$1.00 an acre payment for net increases in perennial forage crops. As a further incentive toward acreage reductions, 1970-71 wheat delivery quotas were changed and based largely on total acreage of summerfallow and the net increase in perennial forage.

The 1970-71 Canadian Dairy Commission policy, announced in March, was designed to maintain net returns for dairy farmers while discouraging surplus production of dairy products. The holdback against surplus production rose from 52 cents to \$1.25 per hundred pounds, effective Apr. 1, 1970. The subsidy for quota milk remained at \$1.25 per hundred-weight with a 26-cent holdback.

Canada pledged \$30,000,000 worth of Canadian food aid and cash for the 1971-72 period at the World Food Program's annual pledging conference. Canada is the second largest contributor, having pledged a total of about \$100,000,000 in food and cash since the WFP was launched in 1963.

The new maximum security livestock quarantine station at St. Pierre was officially opened in April by representatives of the French Ministry of Agriculture and the Canada Department of Agriculture. The station was built and is being maintained by France with the CDA in charge of health aspects, including quarantine regulations and tests. Some 200 cattle from France and Switzerland were released from the station on opening day.

In May, restrictions on the sale of 2,4,5-T weed killer were announced. Public sale was prohibited and 2,4,5-T use was limited to vegetation and brush control on rights-of-way, rangeland and other similar areas not regarded as presenting significant hazards. The report of the five-man task force on Canadian agriculture, appointed on Sept. 22, 1967, was tabled in the House of Commons in May.

In late June, the Canadian Dairy Commission announced a change in the minimum amount of subsidy quota to be allotted to cream shippers not having quotas. This means that a farmer buying a complete milking herd from a quota holder who is discontinuing dairying, may ask to have the seller's quota transferred to him regardless of its size. To avoid splitting larger herds for quota reallocation, the previous minimum quota of 1,750 lb. of butterfat will continue to apply when non-quota shippers buy only a part of a herd from a quota holder.

CDA scientists participated in the transatlantic birth of three healthy pigs. Fertilized eggs taken from a sow at the Department's Animal Diseases Research Institute at Hull, Que., were transplanted to a foster mother at the Central Veterinary Laboratory run by the British Ministry of Agriculture at Weybridge in England. The piglets were born July 13, 1970.

In early August, the final phasing out of the Federal Government's hog quality premium program was announced. The phase-out program began when the new hog-grading system was introduced on Dec. 31, 1968.

In September it was announced that the quality premium for lambs would be phased out at the end of 1970, completing a process that began in April 1969.

Operation LIFT, the Wheat Inventory Reduction Program aimed at reducing wheat acreages on the Prairies, was termed a great success; wheat production was down 50 p.c. from 1969.

A Second Canadian Agricultural Congress was held in Ottawa on Nov. 25-27, to examine the federal Task Force Report on Agriculture, attended by more than 500 persons from all areas of Canadian agriculture. Also in November the Agricultural Stabilization Board announced that there would be no deficiency payment to egg producers under the 1969-70 program. The program provided a floor price of 80 p.c. of the base price (10-year average) under the mandatory provisions of the Agricultural Stabilization Act.

All registrations for seed treatment pesticides containing mercury were cancelled as of Dec. 1, 1970.

Section 2.—Federal Government in Relation to Agriculture*

The Canada Department of Agriculture dates from Confederation. It was established in 1867 as an outgrowth of a Bureau of Agriculture set up in 1852 by an Act of the Legislature of the Province of Canada. The Department derives its authority from the British North America Act, 1867, which states in part that "in each province, the legislature may make laws in relation to agriculture in the province" and that "the Parliament of Canada may from time to time make laws in relation to agriculture in all or any of the provinces; and any law of the legislature of a province relative to agriculture, shall have effect in and for the province as long and as far as it is not repugnant to any Act of the Parliament of Canada".

A Department of Agriculture with a Minister of Agriculture at its head was accordingly established as part of the Government of Canada. Departments of Agriculture headed by provincial Ministers of Agriculture were also set up by the provincial governments, except in the Province of Newfoundland where agricultural affairs are dealt with by the Agricultural Division of the Department of Mines, Agriculture and Resources. The agricultural affairs of the Yukon and Northwest Territories are administered for the Federal Government by the Department of Indian Affairs and Northern Development.

Subsection 1.—Services of the Canada Department of Agriculture

The activities of the Canada Department of Agriculture (CDA) fall into three broad groups: research, promotional and regulatory services, and assistance programs. Research work is aimed at the solution of practical farm problems through the application of fundamental scientific research to all aspects of soil management, agricultural engineering, and crop and animal production. Promotional and regulatory services are directed toward the control or eradication of crop and livestock pests and the registration of chemicals and other materials used to achieve that end, toward the inspection and grading of agricultural products, and toward the establishment of sound policies for crop and livestock improvement. Assistance programs cover some of the sphere of price stability, emergency relief, crop insurance, compensation, and income security in the event of crop failure.

The Department has five main programs—Administration (including Economics), Research, Production and Marketing, Health of Animals, and the Board of Grain Commissioners (see Index)—and its organization includes a number of smaller units—the Agricul-

* Prepared (June 1970) under the direction of S. B. Williams, Deputy Minister of Agriculture, Ottawa.

tural Stabilization Board (p. 557), the Agricultural Products Board, Crop Insurance (p. 558), and Prairie Farm Assistance Administration (p. 562). Agencies closely allied with the Department and responsible to the Minister of Agriculture are the Canadian Dairy Commission (p. 558), the Canadian Livestock Feed Board (p. 563), and the Farm Credit Corporation (p. 561).

Research Branch.—The Research Branch is primarily responsible for research on agricultural production problems although other phases of research are carried on by the Economics Branch (p. 556), the Health of Animals Branch (p. 555), and the Grain Research Laboratory of the Board of Grain Commissioners (p. 554). The activities of the Branch are carried out at 26 Research Stations, 14 Experimental Farms, eight Research Institutes and three Research Services, and at a number of substations and project farms in all 10 provinces and in the Yukon and Northwest Territories. The headquarters of the Branch are in Ottawa where the Executive provides general direction and co-ordination of the program. Approximately 800 professional staff are employed, representing most of the biological and physical sciences that can contribute to the solution of agricultural production problems.

The total program of the Branch is problem-oriented, with specific objectives and goals for the Branch as a whole and relevant objectives and goals for each establishment. With the increasing complexity of modern agricultural production and the competitive pressures that exist, efficiency and reduced cost per unit of production become increasingly important. Therefore, emphasis in the research program continues to be on development of improved varieties of plants and animals, on production practices that will maximize yields and reduce costs, and on methods of controlling insects, diseases and weeds that lower production.

Through the years, the Research Branch plant breeders have produced new varieties of cereal, forage and horticultural crops to meet new market requirements and reduce the hazards of production. Thus, the search has continued for even better material to overcome the limiting factors of a northern climate including a short growing season, frost hazards, drought, insect pests and diseases. At the same time, efforts have been made to develop plants that will respond favourably to long days and the high light intensity of many parts of Canada. As an aid in identifying climatic effects on crops and providing a basis for forecasting possible success with new crops in an area, agrometeorology has become an increasingly important factor. Particular attention has been given in recent years to new crops and outstanding success has been achieved in the development of new varieties of rapeseed with oil quality-tailored to specification. More than 80 new varieties of crops have been developed and put into commercial production in the past 10 years, including almost all of the cereal crops produced in Western Canada.

Feed grains and forage crops have received particular attention to provide for feeds as a basis for economical livestock production. The application of genetics to animal improvement and to increasing knowledge of the nutritional requirements of animals have been the two main activities in direct support of improved livestock production. More recently, increasing emphasis has been given to developing procedures for improved reproductive efficiency of all classes of stock, since low reproductive rate is a seriously limiting factor. Emphasis is also being given to the disposal of animal wastes, a problem that is increasing in severity with the development of larger livestock concentrations.

The battle to control crop diseases and pests is being fought aggressively. Although chemicals have proved to be a potent weapon, their contribution to the total pollution problem has caused particular concern and methods of biological control are therefore receiving increased attention. The development of resistant varieties, the use of parasites and predators, and the destruction of insects by non-chemical means are all in the arsenal of the research workers. In this, as in most other aspects of agricultural research, the team or inter-disciplinary approach is being used more and more.

The CDA Research Branch and the Animal Research Institute have together developed solutions to pollution problems caused by fertilizing fields with manure. One approach is to pump liquid manure from a tanker through hoses directly underground, eliminating all stench.

Increased output per man, in which agriculture has made outstanding advances in the past quarter-century, has been made possible through farm mechanization on a large scale. To assist in continuing this advance, the Branch has expanded its agricultural engineering staff to deal with specific problems and to provide for strengthened liaison with universities and provincial extension officers. The Branch conducts a continuing soil survey in all provinces in co-operation with provincial departments of agriculture and with faculties of agriculture in universities and also conducts an extensive program of research on soil fertility and cultural practices, working toward the objective of using the agricultural soils most effectively and of conserving them for the future.
